We propose to lead the entire hole with heavy mud; then set a cement plug from a T. D. of 5204' to a point well above 5195', where a salt water sand was encountered.

A second plug will be set at 2800' and below for the base of salt. A third plug will be spotted at 1610' for the top of the salt. We then propose to recover the string of 8-5/8" casing, which is set at 1421'.
