

C. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the well site in an as aesthetically pleasing condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. After abandonment, all equipment, trash and junk will be removed and the location cleaned. Any special rehabilitation and/or special revegetation requirements of the surface management agency will be complied with and accomplished as expeditiously as possible.

11. OTHER INFORMATION:

- A. Topography: The land surface is relatively level with regional slope being southwest. There are sand dunes in the north part of the well site area.
- B. Soil: The top soil is a loamy sand.
- C. Flora and Fauna: The vegetative cover is sparse and consists of mesquite, shinnery, sunflower, weeds and range grasses. Wildlife in the area is that typical of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles, dove and quail.
- D. Ponds and streams: There are no fresh water rivers, streams, lakes or ponds in the area.
- E. Residences and Other Structures: There are no occupied dwellings within two miles of the proposed well site. There is an abandoned windmill about 300 feet southwest of the proposed well.
- F. Archaeological, Historical, and other Cultural Sites: None observed in the area.
- G. Land Use: Grazing and hunting in season.
- H. Surface Ownership: Federal.
