Sanderson A-14 No. 6 Hobbs, New Mexico July 10, 19 51

Well No. 6 is located 660 ft. from S line and 660 ft. from E line of sec. 14

SE/4 Sec. 14 20-3 36-11 N.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Lea New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3570 ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Sanderson A-14, No. 6 was tested on 4-10-51 and the well flowed 76.3 bbls. oil, and 6.2 bbls. water with 862 MCF gas in 23 hrs. thru a 2 1/2" choke, with a gas oil ratio of 11,30%. CP 0%, IP 500%. It is therefore proposed to squeeze off perforations from 3874 to 3888' in the 4" liner, deepen the well approximately 25', and test the open hole. If commercial production is not obtained, it is planned to plug back into the liner and re-perforate and test presently perforated interval by spotting acid prior to perforating. Other zones will be tested as necessary if commercial production is not obtained by above tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
