

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	<input checked="" type="checkbox"/>	REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Monument, New Mexico

Place

April 25, 1936.

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a report on the work done and the results obtained under the heading noted above at the

AMERADA PETROLEUM CORPORATION STATE "R" Well No. 1 in the
Company or Operator Lease
Center NE SW of Sec. 29, T. 19-s, R. 37-e, N. M. P. M.,
Monument Field, Lea County.

The dates of this work were as follows: April 24, 1936.

Notice of intention to do the work was (~~was not~~) submitted on Form C-102 on March 25, 1936. 19

and approval of the proposed plan was (was not) obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

DRILLING OPERATIONS BEGUN APRIL 24, 1936.

DUPLICATE

Witnessed by C.S. COCK, Noble Drilling Co., Tool Pusher
Name Company Title

Subscribed and sworn to before me this 27

day of April, 19 36

Patricia Mahoney
Notary Public

My Commission expires 10-24-39

I hereby swear or affirm that the information given above is true and correct.

Name J. A. Stanley

Position Farm Boss

Representing AMERADA PETROLEUM CORPORATION
Company or Operator

Address Monument, New Mexico

Remarks:

[Signature]
Name
Oil & Gas Inspector
Title

1. The first step in the process of the OIL Corporation is to identify the oil fields in the area. This is done by the OIL Corporation's geologists, who use a variety of methods to identify the oil fields. These methods include seismic surveys, which use sound waves to create a picture of the underground, and drilling, which involves drilling a hole into the ground to see if there is oil. Once the oil fields have been identified, the OIL Corporation will then decide whether or not to develop them. This decision is based on a number of factors, including the size of the oil field, the depth of the oil, and the cost of development. If the OIL Corporation decides to develop an oil field, it will then need to obtain the necessary permits and licenses from the government. This process can be quite lengthy, and it is important for the OIL Corporation to work closely with the government to ensure that all the necessary requirements are met. Once the permits and licenses have been obtained, the OIL Corporation will then be able to begin the process of developing the oil field. This process will involve drilling a well, installing the necessary equipment, and then extracting the oil. The OIL Corporation will then need to transport the oil to a refinery, where it will be processed into various products. Finally, the OIL Corporation will need to sell the products to the market. This process can be quite complex, and it is important for the OIL Corporation to work closely with the market to ensure that all the necessary requirements are met. Once the products have been sold, the OIL Corporation will then be able to begin the process of refining the oil. This process will involve distilling the oil into various products, such as gasoline, diesel, and kerosene. The OIL Corporation will then need to transport the products to a distribution center, where they will be sold to the public. Finally, the OIL Corporation will need to pay the government the necessary taxes on the oil. This process can be quite complex, and it is important for the OIL Corporation to work closely with the government to ensure that all the necessary requirements are met. Once the taxes have been paid, the OIL Corporation will then be able to begin the process of refining the oil. This process will involve distilling the oil into various products, such as gasoline, diesel, and kerosene. The OIL Corporation will then need to transport the products to a distribution center, where they will be sold to the public. Finally, the OIL Corporation will need to pay the government the necessary taxes on the oil. This process can be quite complex, and it is important for the OIL Corporation to work closely with the government to ensure that all the necessary requirements are met.

• *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in all photosynthetic organisms. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH. It is found in the thylakoid membranes of chloroplasts in plants and algae, and in the plasma membrane of cyanobacteria.
