It is a common mistake to think that the only way to protect the environment is to restrict development. In fact, the most effective way to protect the environment is to promote sustainable development. This means development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Sustainable development can be achieved by promoting economic growth, social justice, and environmental protection. The three pillars of sustainable development are interdependent and must be pursued together. Economic growth provides the resources needed for social and environmental progress. Social justice ensures that the benefits of development are shared by all. Environmental protection ensures that the natural resources on which we all depend are preserved for future generations. By promoting sustainable development, we can create a better world for all.

1. The first of these is the fact that the Commission has not yet received any information from the Government of the United States regarding the results of its investigation into the activities of the American Friends Service Committee (AFSC) in the Philippines. The Commission is deeply concerned that the AFSC, which has been active in the Philippines since 1945, may have been involved in the activities of the Communist Party of the United States (CPUSA) in the Philippines. The Commission is also concerned that the AFSC may have been involved in the activities of the National People's Party (NPP) in the Philippines. The Commission is therefore requesting the Government of the United States to provide the Commission with the results of its investigation into the activities of the AFSC in the Philippines as soon as possible.
