The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well on the above described location to a total depth of approximately 5700 ft. in the Blinery pay with the following casing and cementing program: Set 13 3/8" OD casing at 600 ft. and cement with sufficient amount of cement to circulate. Set 9 5/8" OD or 8 5/8" OD casing at approximately 3300 ft. and cement with sufficient amount of cement to circulate. Set 5 1/2" or 7" OD casing at approximately 5700 ft. and cement with 500 sk., perforate and acidize as necessary for production. If any difficulty should be encountered while drilling, making it necessary to alter the casing program, we will file a "Notice of Intention to Change Plans."

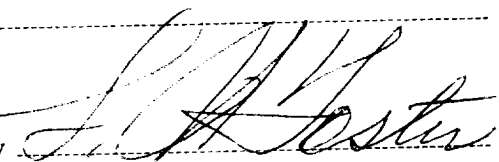

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
