We propose to convert this well to water injection service to expand the water flood project now in operation under authority of Commission Order R-2495 and WFX-180.

This well will be cleaned out to TD and 2" NUP 1.77 J-55 tubing run on packer and seated at approximately 3000' (1000'+ below top of cement). Injection will be through 2" tubing with the annular space between tubing and casing loaded with inhibited water.

This well is the second location south of our injection well No. 1-10 and is the south offset to well No. 5-1 which has experienced increased production due to the water flood.
