

Unit 8
Sec. 21, T21S, R36E

PRESENT STATUS: Producing 15 BO + 165 BW + 17 mcf/d (5-3-67)

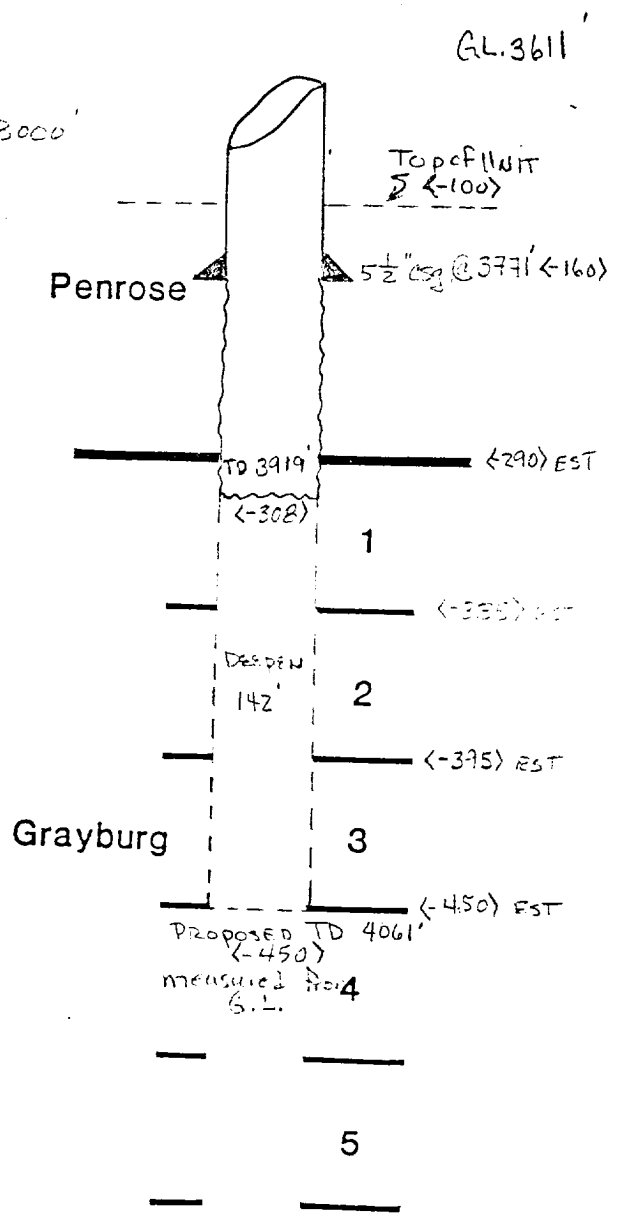

PROPOSED STATUS: PHASE II PRODUCER

EXISTING LOGS: None

RECOMMENDED LOGS: GR-CNL-CLL w/caliper from TD-3000'
2 repeats TD -3600'

RECOMMENDATION: Deepen subject well 142' from current TD of 3919' to a new TD of 4061' as measured from G.L. Log with GR-CNL-CLL w/caliper. TREAT AS UNPRODUCED. NO FURTHER WELL TO PRODUCE FROM.

RESERVES:

COMMENTS: This well is currently producing 165 BW based on latest gas separator test. However, zones 1, 2 & 3 have been proven productive in offset wells i.e. #442. It is recommended to deepen this well to produce from zone 4. This will increase production and reduce the need for a new well.
