DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a total depth of approximately 7800' with rotary tools, in an attempt to obtain commercial production in the Simpson. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing patterns: 250' of 10 3/4" casing to be cemented with approximately 250 sacks cement to be circulated; 7 5/8" casing to be set at approximately 3200' and cemented with 1260 sacks cement, or sufficient cement to protect the well section as determined by survey; 5 1/2" casing to be set at total depth and cemented with 525 sacks cement or as determined by survey, and to be perforated opposite the pay zone.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
