

The New Mexico Oil Conservation Commission
Page Two

anticipated from the Blinebry from which commingling permission was granted under date of November 25, 1981, we hereby respectfully request that the Commission consider allowing the operator to remove the packer from this well separating the Drinkard from the Wantz Abo and allow these two sections to produce by commingling downhole in a similar fashion to that anticipated earlier from the Drinkard and Blineby.

It is understood that if this request can be granted by the Conservation Commission, then the Blinebry will not be opened as provided by your order DHC-350, until further approval of such opening under the conditions then existing in this borehole are submitted for consideration by the Commission.

Your consideration of this request is sincerely appreciated. If any additional data is required, please call upon us and we will promptly supply the same.

Yours very truly,

John C. Byers
