(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

June 4, 1958

Well No. 1 is located 100 ft. from N line and 100 ft. from E line of sec. 4

San Antonio (Sec. and Sec. No.) 100 (Twp.) 100 (Range) 100 (Meridian)
San Antonio (Field) San Antonio (County or Subdivision) San Antonio (State or Territory)

The elevation of the derrick floor above sea level is 100 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Hole was spudded with Art Hole Drilling Machine to depth of 35 feet on May 11, 1958. A Jack Knife rig was then moved in and drilling continued to depth of 125 feet on May 15, 1958. A string of 2 1/2" x 3/8" steel casing was then run and cemented on bottom with 1 1/2 sacks. Cement returned to cellar and approximately 10 sacks was jetted to pits. After cement had set approximately 24 hours, the plug was drilled and casing was cemented to top with 100' for 30 minutes. Cement job tested 2.5'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
