Santa Fe, New Mexico 87501

Gentlemen:

The subject wells have had casing integrity tests performed on the dates indicated. As noted, the test was successful on the Harrison Federal 3; however, the pressure on the Harrison Federal No. 1 did not hold to 500 psig.

Our engineering department staff are presently evaluating what procedure will be taken as to plug and abandon requirements since indications on surface casing suggest possible leak in 7" production casing.

We have filed sundry notices with the BLM and enclosed please find Form C-103 as notice to the State. If there are any further inquiries, please contact the undersigned.

Very truly yours,

AMERICAN EXPLORATION COMPANY

Roy Quiroga  
Production Administrator
