The elevation of the derrick floor above sea level is 2987 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is no longer economical to produce this well and workover possibilities have been exhausted. Produced only 29 MCF of gas during month of January 1962. We propose to plug and abandon the well by cutting and pulling the 8 5/8", 10 3/4", 13" and 16" casing from approximate depths of 2200; 1700; 775' and 508' respectively. Cement plugs to be set as follows: 35 Sx at 2850, 30 Sx half in and out of 8 5/8" stub; 50 Sx. half in and out of 10 3/4" stub; 50 Sx in 13" shoe at 1145'; 75 Sx. half in and out of 13" stub; and spot 100' plug at surface. All intervals to be filled with heavy mud laden fluid. Erect P & A Marker, restore ground to its natural contour.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
