Oil & Gas metering and allocation:

The central tank battery is located on the pad of the in D Sec 15, T23S-R26E, Eddy Co., New Mexico. Each well will flow through their own individual 3 phase separator with turbine meters to measure the oil and water and an EFM gas allocation meters to measure the gas. VRU will be allocated back to the well level using the monthly oil production from each well. The wells have identical Owners and Percentages.

The commingle battery has 3-500 bbl oil tanks and 3-500 bbl water tanks. After all the wells flow through their own 3 phase separator/heater, the oil will be metered individually through its own turbine meter on the way to the oil tanks. Oil is trucked off location. Downstream of the 3-phase separator each well has its own Electronic Flow Meter to measure the gas for allocation of sales back to the individual well. Our cumulative meter amount is the check for the Lucid's Sales Meter. The water is metered using a turbine meter for each well and then flow to the water tanks.

Oil production will be allocated daily based on the turbine allocation meter located downstream of the 3-phase separator. The turbine oil meter will be proven as per API AND NMOCD specifications. The gas will be allocated back to SUMMARY DETAIL 08/13/18

the well using volumes downloaded from the individual wells allocation meter. The gas will be allocated using MMBTU volumes from each well. The gas off the VRU allocation meter will flow to the Lucid's gas sales meter (low psi). The gas meters will be calibrated on a regular basis per API and NMOCD specifications. The NMOCD will be notified of any future changes to the facility.

Process and Flow Description:

The flow of produced fluids is shown in detail on the enclosed facility diagram, along with a description of each vessel and a plat which show the lease boundaries, Communitization boundaries, and location of wells and wellbore paths. The proposed commingling is appropriate based on the NMOCD guidance. The proposed commingling will maximize the ultimate recovery of oil and gas from leases and will reduce environmental impacts. The proposed commingling will reduce operating expense, as well as, not adversely affect federal royalty income, production accountability, or the distribution of royalty.
