Good afternoon,

I would like to formally request to protest the following application from Solaris Water Midstream:

Re-permitting of the North Lusk 32 State SWD 1 well. (Previously authorized by OCD order SWD-1394 for the Devonian.)

API 30-025-41525

Will you please let me know this has been received?

Thank you in advance,
~Mikah

Subject: Protest of C-108 Application for Authorization to Inject in North Lusk 32 State SWD #1 (SWD-2646)
Date: Friday, March 21, 2025 3:42:00 PM
Attachments: [image001.png](#)

Greeting Mr. Stone,

The OCD was notified by E.G.L. Resources, Inc. a PBEX Resources Co., it is protesting the following injection permit request application of Solaris Water Midstream, LLC for produced water disposal in Lea County, NM:

- North Lusk 32 State SWD #1 well is located in Section 32, Township 18 South, Range 32 East, Lea County, New Mexico

E.G.L. Resources, Inc. a PBEX Resources Co. is identified as an affected person for the referenced application. For the application to proceed, Solaris Water Midstream, LLC has two options; either resolve the matter with the protesting party or to go to a hearing before the Division. If the protest is withdrawn, then the application could be processed administratively. Meanwhile, OCD will retain your application until a resolution is reached on the status of the submittal. If you have any questions, please don't hesitate to reach out to the UIC group.

Thank you,

Stacy Sandoval

RE: Protest Salt Water Disposal Application

To who it may concern:

E. G. L. Resources, Inc., would like to take the opportunity to formally request to protest the application to re-permit a salt water disposal well by Solaris Water Midstream.

Application details:

North Lusk 32 State SWD 1
Previously authorized by OCD order SWD-1394 for the Devonian
API 30-025-41525

Please let me know if you need anything additional to process this protest.

Thank you,

ADMINISTRATIVE APPLICATION CHECKLIST

THIS CHECKLIST IS MANDATORY FOR ALL ADMINISTRATIVE APPLICATIONS FOR EXCEPTIONS TO DIVISION RULES AND REGULATIONS WHICH REQUIRE PROCESSING AT THE DIVISION LEVEL IN SANTA FE

Applicant: Solaris Water Midstream, LLC **OGRID Number:** 371643
Well Name: North Lusk 32 State SWD #1 **API:** 30-025-41525
Pool: SWD; Brushy Canyon **Pool Code:** 97802

SUBMIT ACCURATE AND COMPLETE INFORMATION REQUIRED TO PROCESS THE TYPE OF APPLICATION INDICATED BELOW

- 1) **TYPE OF APPLICATION:** Check those which apply for [A]
 A. Location – Spacing Unit – Simultaneous Dedication
☐ NSL ☐ NSP (PROJECT AREA) ☐ NSP (PRORATION UNIT) ☐ SD
 B. Check one only for [I] or [II]
 [I] Commingling – Storage – Measurement
☐ DHC ☐ CTB ☐ PLC ☐ PC ☐ OLS ☐ OLM
 [II] Injection – Disposal – Pressure Increase – Enhanced Oil Recovery
☐ WFX ☐ PMX ☒ SWD ☐ IPI ☐ EOR ☐ PPR

- 2) **NOTIFICATION REQUIRED TO:** Check those which apply.
 A. ☒ Offset operators or lease holders
 B. ☐ Royalty, overriding royalty owners, revenue owners
 C. ☒ Application requires published notice
 D. ☒ Notification and/or concurrent approval by SLO
 E. ☒ Notification and/or concurrent approval by BLM
 F. ☒ Surface owner
 G. ☒ For all of the above, proof of notification or publication is attached, and/or,
 H. ☐ No notice required

FOR OCD ONLY

- ☐ Notice Complete
☐ Application Content Complete

- 3) **CERTIFICATION:** I hereby certify that the information submitted with this application for administrative approval is **accurate** and **complete** to the best of my knowledge. I also understand that **no action** will be taken on this application until the required information and notifications are submitted to the Division.

Note: Statement must be completed by an individual with managerial and/or supervisory capacity.

Attn: Mr. Gerry Razatos, Acting Director

Re: Application of Solaris Water Midstream, LLC to permit and otherwise reinstate for salt water disposal its North Lusk 32 State SWD #1, API 30-025-41525) located in Section 32, Township 19 South, Range 32 East, NMPM, Lea County, New Mexico.

Dear Mr. Razatos,

Please find enclosed form C-108 Application for Authority to Inject, supporting the above-referenced request to permit for disposal the subject well. The well was previously authorized by another operator for salt water disposal by division order SWD-1394. The subject well is one of many acquired by Solaris in the last few years and due to a combination of factors, including mechanical integrity, this well went inactive and a new C-108 for Devonian was filed in 2023. While waiting on processing for that application, seismic and other events prompted Solaris to investigate other strategies and determined that with an available long section of sandy Brushy Canyon formation, that should be the new target zone. The Brushy Canyon interval is the target of this C-108 will all supporting data and exhibits. By repermitting the SWD, the applicant can again service disposal needs operators in the area.

Solaris Water Midstream, LLC seeks to optimize efficiency, both economically and operationally, of all its operations in southeast New Mexico. Approval of this application is consistent with that goal as well as the NMOCD's mission of preventing waste and protection of correlative rights.

Published legal notice ran in the December 19, 2024, edition of the Hobbs News-Sun and offset operators and other affected parties have been notified individually. The well is located on state land and minerals.

I respectfully request that the approval of this salt water disposal well proceed swiftly and if you or your staff requires additional information or has any questions, please do not hesitate to call or email me.

Best regards,

A handwritten signature in blue ink, appearing to read "Ben Stone", is written over a light blue horizontal line.

Ben Stone, Partner

FORM C-108
Revised June 10, 2003

APPLICATION FOR AUTHORIZATION TO INJECT

- I. PURPOSE: **Salt Water Disposal** and the application **QUALIFIES** for administrative approval.
- II. OPERATOR: **Solaris Water Midstream, LLC**
ADDRESS: **9651 Katy Freeway, Suite 400, Houston, Texas, 77024**
- CONTACT PARTY: **Agent: SOS Consulting, LLC – Ben Stone (936) 967-5950**
- III. WELL DATA: **All Well Data and Applicable Wellbore Diagrams and Packer Info are ATTACHED.**
- IV. **This is not an expansion of an existing project.**
- V. **A map is attached** that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- *VI. A **Tabulation is ATTACHED** of data on all wells of public record within the area of review which penetrate the proposed injection zone. **There are 49 wells in the subject AOR, 39 which Penetrate the proposed BRUSHY CANYON interval.** The data includes a description of each well's type, construction, date drilled, location, depth, and a schematic of any plugged well illustrating all plugging detail. **11 P&A (of 39 total) wells penetrate, 4 are listed as NEW (non-existent).**
- VII. **The following data is ATTACHED** on the proposed operation, including:
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. **Appropriate geologic data on the injection zone is ATTACHED** including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.
- IX. **Stimulation program – a conventional acid job of up to 40,000 gals. may be performed to clean and open the formation.**
- *X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted). **Well Logs [deep zone] are ON FILE with OCD. Depth Control logs will be run for perforating.**
- *XI. **There is 1 P&A'd water well within one mile of the proposed salt water disposal well per OSE data.**
- XII. **An affirmative statement is ATTACHED that available geologic and engineering data has been examined and no evidence was found** of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.
- XIII. **"Proof of Notice" section on the next page of this form has been completed and ATTACHED. There are 11 offset lessees and/or operators within ONE mile plus State and Federal minerals - all have been noticed. Location is STATE.**
- XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: **Ben Stone** TITLE: **SOS Consulting, LLC agent for Solaris Water Midstream, LLC**

SIGNATURE:  DATE: **1/23/2025**

E-MAIL ADDRESS: **ben@sosconsulting.us**

- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal:

DISTRIBUTION: Original and one copy to Santa Fe with one copy to the appropriate District Office

FORM C-108 – APPLICATION FOR AUTHORIZATION TO INJECT (cont.)**III. WELL DATA – *The following information and data is included (See ATTACHED Wellbore Schematic):***

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No., Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and details on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE *pursuant to the following criteria is ATTACHED.*

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

**Weatherford®**

Packer Systems

Arrowset I-XS Mechanical Packer

Weatherford's Arrowset I-XS mechanical packer is a versatile, field-proven retrievable double-grip packer for isolating the annulus from the production conduit. The packer can be set with tension or compression.

A patented upper-slip releasing system reduces the force required to release the packer. A nondirectional slip is released first, making it easier to release the other slips. The packer also has a straight-pull safety release.

Applications

- Production
- Pumping
- Injection
- Fiberglass tubing
- Completions requiring periodic casing-integrity tests
- Zonal isolation

Features, Advantages and Benefits

- The design holds differential pressure from above or below, enabling the packer to meet most production, stimulation, and injection needs.
- The packer can be set with compression or tension, enabling deployment in shallow and deep applications.
- The packer can be set and released with only a one-quarter turn of the tubing.
- The bypass valve is below the upper slips so that debris is washed from the slips when the valve is opened, reducing the times for circulation and total retrieval.
- The packer can be run with Weatherford's T-2 on-off tool, which enables the tubing to be disconnected and retrieved without retrieving the packer.

Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

- MIRU PU. NU BOP.
- PU workstring & TIH w/3.75" casing swage, 6-3 1/2" drill collars, bumper sub and hydraulic jars.
- Work swage through collapsed casing @ 6993'; TOH w/workstring.
- Change out casing swage, using 1/4" larger swage each trip, up to a maximum of 4.75". TIH w/same bottom hole assembly each trip and work through collapsed section.
- TIH w/5 1/2" cement retainer on workstring. Set retainer @ 11,050'. Squeeze perfs (11,114'-11,554') w/100 sx C1 H cement.
- Sting out of retainer. Circulate 10 ppg mud. Spot 25 sx C1 H cement on top of retainer.
- PUH to 10,200' & spot 25 sx C1 H cement (across Wolfcamp).
- PUH to 8,500' & spot 25 sx C1 H cement (across Bone Springs).
- PUH to 3,650' & spot 25 sx C1 H cement (across Grayburg).
- PUH to 2,900' & spot 25 sx C1 H cement (across 7 Rivers/Queen).
- PUH & spot 5 sx C1 H cement from 50' to surface.
- LD workstring. Weld on plate.
- RD and MDL.
- Restore location.

XXXXXXXXXXXX

11,620' TD. Plugged and abandoned as follows:

Ran tubing open ended. Hit bridge at 10,551'. Could not spot cement plug at 11,147' to 11,247' as proposed on our "Notice of Intention". Circulated hole with mud and spotted 50 sack cement plug from 10,146' to 10,551'. Pulled tubing. Shot 5-1/2" casing off at 9252' and pulled casing. Ran tubing to 9292'. Cemented with 25 sacks of cement. Set 30 sack cement plug from 6800' to 6900', 30 sack cement plug from 4896 to 4996', 30 sack cement plug from 3146' to 3246'. Shot 8-5/8" casing off at 2338' and pulled casing. Set 60 sack cement plug from 1100' to 1200', 65 sack plug from 650' to 750' and 50' plug from surface with 40 sacks. Installed dry hole marker. Plugged and abandoned 8-17-65.

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

RIH open ended to 4950'; spotted 25 sx plug, tagged TOC @ 4717'.

Circulated hole w/9.5 ppg mud, cut 4 1/2" casing @ 3864', POOH w/casing.

RIH open ended to 3934' (70' inside 4 1/2" casing stub). Spotted 25 sx cement, calc TOC @ 3749'.

PUH to 2029', spotted 75 sx cement plug; tagged TOC @ 1967'; Steve @ BLM recommended to respot 25 sx more to bring TOC up to 1929'.

Calculated TOC @ 1930'.

Spotted 60 sx cement @ 1158', tagged TOC @ 878'.

Pumped 15 sx cement plug from 60' to surface. Install dry hole marker.

*Approved as to plugging of the well bore.
 Liability under bond is retained until
 surface restoration is completed.*

C-108 ITEM VII – PROPOSED OPERATION

North Lusk 32 State SWD No.1

Commercial SWD Facility

Background

The subject SWD, previously permitting for Devonian disposal, commenced injection in January 2016. Rates were modest, averaging 1000 to 2000 bwpd at 0 psi, presumably vacuum. Injection continued at similar rates, often much less, until September/ October 2016 when the well failed a mechanical integrity test. Solaris acquired the well from COG Operating in July 2019. In August 2021, 35 bbls was pumped while monitoring the annulus to confirm an issue with the tubing. Solaris filed various sundry notices to inform of the repair process. The tubing was pulled in July 2023, the bad section was identified, and the tubing was stacked. Solaris filed a TA sundry to secure the well while a new C-108 was prepared and filed to reinstate the well as a Devonian SWD.

Subsequently, during the two year wait for processing, seismic activity in the state caused OCD to assess the viability of continued default C-108s for SWDs in the Devonian. Solaris reviewed the area around the North Lusk well to consider FSP and seismic analysis. It was determined that a lack of [commercially available] fault data and indications that there may indeed be some faulting in such proximity, that considering recent cases for DMG disposal, particularly as presented by Chevron for some of its disposal efforts, that the Lusk would be reviewed for this potential. Log cross sections show that a long interval of (DMG) Brushy Canyon exists and offers some decent, clean sandy intervals with good porosity that will present good disposal possibility which is the subject target of this C-108.

A current wellbore diagram is included to reflect the TA status of the well with 2 retrievable bridge plugs set above the casing shoe.

Configure for Salt Water Disposal

Prior to commencing any additional work, NOI sundry(ies) will be submitted and will detail the completion workover including all work otherwise described above, any change to the procedure noted herein and to perform mechanical integrity pressure test per OCD test procedures. (Notify NMOCD 24 hours prior.) The casing/tubing annulus will be monitored for communication with injection fluid or loss of casing integrity.

Operational Summary

Being tied into existing Solaris pipelines and other infrastructure, the well and injection equipment will be a closed system and equipped with pressure limiting devices and volume meters. The annulus, loaded with an inert, anti-corrosion packer fluid, will be monitored for pressure.

The tanks will be equipped with telemetry devices and visual alarms to alert the operator and customers of full tanks or an overflow situation.

Anticipated daily maximum volume is 15,000 bpd and an average of 8,500 bpd at a maximum surface injection pressure of 1060 psi (.2 psi/ft gradient – maximum pressure will be adjusted if the top of interval is modified after well logs are run).

Potential releases will be contained and cleaned up immediately. The operator shall repair or otherwise correct the situation within 48 hours before resuming operations. OCD will be notified within 24 hours of any release greater than 5 bbls. If required, remediation will start as soon as practicable. The operator shall comply with 19.15.29 NMAC and 19.15.30 NMAC, as necessary and appropriate.

C-108 ITEM X – LOGS and AVAILABLE TEST DATA

A **Cross-Section** presentation with offsetting wells to west and east of the proposed SWD to identify the Brushy Canyon interval and confining layer strata is shown in the next [geological] section.

Other previously run logs are on file with the OCD. Solaris had the raster logs digitized for the up-hole sections, so the new injection interval is covered as well.

A section of the Radial Cement Bond Log (4000' to 7000') is included and shows good cement bond above and below the proposed injection interval.

Bottomhole Pressure calculations were performed using the various parameters and presented with corresponding charted wellhead pressure.

VIII. Geologic Description

The proposed injection interval between 5,300 and 6,350 feet measured depth is within the Brushy Canyon Formation. The top of the Lower Brushy Canyon is interpreted to be at 6,355 feet measured depth, based on open-hole logs, and is excluded from the injection interval.

The Brushy Canyon Formation in this area consists of interbedded sequences predominantly composed of sandstone and siltstone, with minor amounts of shale. Most of the 1,350-foot-thick injection interval has over 10% porosity (Figure 2) and is laterally continuous within the project area (Figure 4), making it a suitable target for high-rate injection (15,000 barrels of water per day).

The risk of interference with production from the Brushy Canyon Formation and the Delaware Mountain Group overall is low, as there is limited production near the subject well. The nearest active production wells in the zone are nearly two miles from the North Lusk 32 State SWD #1. Both producing wells are low volume, with reported production over the last 12 months (L12M) averaging less than 1 barrel of oil per day (bopd) and less than 1.5 bopd, respectively. The nearest significant production is from the Shugart East field, which averages over 200 bopd (L12M) and is located 2.4 miles away and 400–500 feet up-dip from the proposed injection site (Figure 3). The Delaware Mountain Group and Avalon Shales have not been targeted for horizontal development in this area, and the well is located outside both the DMGRA and DMGHRP areas (Figure 1).

Freshwater in the area is limited but may generally be available from the Santa Rosa or Dewey Lake Formations. OSE records indicate that water wells in the area have an average groundwater depth of 318 feet in the township. The base of the lowermost Underground Source of Drinking Water (USDW), identified as the top of the first anhydrite, is located at the top of the Rustler Formation at a depth of 1,141 feet below ground level. State Engineer records also show one water/monitor well within one mile of the subject SWD; however, this well was drilled and subsequently plugged with no or minimal water show (*as documented in the water well section of the application*).

The subject well is located in the back platform relative to the Capitan Reef, where the remnant Delaware Mountain Group is overlain by the platform formations of the Artesia Group (Figures 1 and 3). The well is over a mile and a half from the back edge of the Capitan Reef, as delineated by Hiss (1975). Upper confinement is provided by a low-porosity, high-resistivity (indicating low permeability) carbonate interval within the Cherry Canyon Formation, located between 4,812 and 5,158 feet measured depth. This interval is laterally extensive and correlates even as it thins toward the basin (Figure 5).

Deeper formations, such as the Bonespring sands and Wolfcamp, which have been exploited by horizontal drilling, are isolated from the injection interval by the 1,350-foot-thick Bonespring Lime and Avalon Shales underlying the Brushy Canyon Formation.

All depths and thicknesses stated here are estimated from the subject well's logs or from mapping using offset wells that have penetrated the relevant formations.

Seismicity

Solaris is pursuing recompletion to a Brushy Canyon disposal, rather than returning the well to injection in the Devonian, partly due to challenges associated with assessing seismicity risk in this area. The Atoka faults mapped by Price et al., (2022) are not expressed at the Brushy Canyon and shallow injection is at low risk of causing induced seismicity.

The region surrounding the North Lusk SWD #1 has been seismically quiescent (Figure 6 shows USGS seismic events in the region), and the well is not in a Seismic Response Area. Published data on maximum horizontal stress (SHmax) indicates that the orientation of SHmax rotates in the region around the North Lusk 32 SWD #1 (Dvory and Zoback, 2021; Snee and Zoback, 2022). FSP 2.0 can only accommodate a single azimuth for SHmax, complicating any quantitative assessment of induced seismicity risk (Walsh et al., 2018).

C-108 ITEM XII – GEOLOGIC AFFIRMATION

We have examined available geologic and engineering data and have found no evidence of open faults or other hydrologic connection between the disposal interval and any underground sources of drinking water.

North Lusk 32 State SWD #1 – 1-Mile AOR Water Wells

(Attachment to NMOCD Form C-108, Application for Authority to Inject.)

WELL PLUGGING PLAN OF OPERATIONS

NOTE: A Well Plugging Plan of Operations shall be filed with and accepted by the Office of the State Engineer prior to plugging. This form may be used to plug a single well, or if you are plugging multiple monitoring wells on the same site using the same plugging methodology.

Alert! Your well may be eligible to participate in the Aquifer Mapping Program (AMP)-NM Bureau of Geology geoinfo.nmt.edu/resources/water/cgmn/ if within an area of interest and meets the minimum construction requirements, such as there is still water in your well, and the well construction reflected in a well record and log is not compromised, contact AMP at 575-835-5038 or -6951, or by email nmbg-waterlevels@nmt.edu, prior to completing this prior form. Showing proof to the OSE that your well was accepted in this program, may delay the plugging of your well until a later date.

I. FILING FEE: There is no filing fee for this form.

II. GENERAL / WELL OWNERSHIP: ☐ Check here if proposing one plan for multiple monitoring wells on the same site and attaching WD-08m

Existing Office of the State Engineer POD Number (Well Number) for well to be plugged: CP-1938-POD1

Name of well owner: Raybaw Operating, LLC

Mailing address: 2626 Cole Avenue Suite 300 County: Dallas

City: Dallas State: TX Zip code: 75204

Phone number: 281-793-5452 E-mail: nwinn@sbcglobal.net

III. WELL DRILLER INFORMATION:

Well Driller contracted to provide plugging services: Hungry Horse, LLC

New Mexico Well Driller License No.: 1755 Expiration Date: 10-14-2023

IV. WELL INFORMATION: ☐ Check here if this plan describes method for plugging multiple monitoring wells on the same site and attach supplemental form WD-08m and skip to #2 in this section.

Note: A copy of the existing Well Record for the well(s) to be plugged should be attached to this plan.

1) GPS Well Location: Latitude: 32 deg, 42 min, 21.34 sec
Longitude: 103 deg, 47 min, 29.13 sec, NAD 83

2) Reason(s) for plugging well(s):

No water present

OSE DIT DEC 12 2022 PM 2:29

3) Was well used for any type of monitoring program? Yes If yes, please use section VII of this form to detail what hydrogeologic parameters were monitored. If the well was used to monitor contaminated or poor quality water, authorization from the New Mexico Environment Department may be required prior to plugging.

4) Does the well tap brackish, saline, or otherwise poor quality water? No If yes, provide additional detail, including analytical results and/or laboratory report(s): N/A

5) Static water level: >100 feet below land surface / feet above land surface (circle one)

6) Depth of the well: 51' feet

NOTIFICATION TO INTERESTED PARTIES
via U.S. Certified Mail – Return Receipt Requested

To Whom It May Concern:

Solaris Water Midstream, Houston, Texas, has made application to the New Mexico Oil Conservation Division to [re-]permit for salt water disposal the North Lusk 32 State SWD #1. (Previously authorized by OCD order SWD-1394 for Devonian SWD). The SWD operation will be for commercial water disposal from area operators. As indicated in the notice below, the well is located in Section 32, Township 18 South, Range 32 East in Lea County, New Mexico.

The published notice states that the interval will be from 5,300 feet to 6,650 feet into the Brushy Canyon (DMG) formation. Following is the notice published in the Hobbs News-Sun, Hobbs, New Mexico on or about December 19, 2024.

LEGAL NOTICE

Solaris Water Midstream, LLC, 9651 Katy Freeway, Suite 400, Houston, Texas, 77024, is filing Form C-108 (Application for Authority to Inject) with the New Mexico Oil Conservation Division seeking administrative approval for a salt water disposal well. The well, the North Lusk 32 State SWD No.1, (API 30-025-41525) is located 1550' FSL and 1800' FWL, Section 32, Township 18 South, Range 32 East, Lea County, New Mexico. Produced water from area production will be commercially disposed into the Brushy Canyon formation at a depth of 5,300' to 6,650' at a maximum surface pressure of 1060 psi with a maximum daily rate of 15,000 bwpd and an average daily rate of 8,500 bwpd. The proposed SWD well is located approximately 10.7 miles south/ southwest of Maljamar, NM. The well was previously authorized for SWD by NMOCD order SWD-1394 and approval will effectively reinstate the well under a new permit for the new DMG interval.

Interested parties wishing to object to the proposed application must file with the New Mexico Oil Conservation Division, 1220 St. Francis Dr., Santa Fe, NM 87505, (505)476-3460 within 15 days of the date of this notice. Additional information may be obtained from the applicant's agent, SOS Consulting, LLC, (936)367-5950 or, email info@sosconsulting.us.

You have been identified as a party who may be interested as an offset lessee or operator.

You are entitled to a full copy of the application. SOS Consulting has deployed a new app for the explicit secure delivery of a full PDF copy of the application. Any user employed with **Affected Party** may log into the system and when prompted for a *Document Access Code*, enter **0000XX** to View or Download the document as desired. Using the *SOS Client and Affected Party Document Access* app takes about one minute, start to finish – instructions are included, and only name, email and company name are needed to access the system.

Thank you for your attention in this matter.

Best regards,

Ben Stone, SOS Consulting, LLC
Agent for Solaris Water Midstream, LLC
Cc: Application File

User Information for the SOS Client & Affected Party Portal

Thank you for using the new SOS Document Portal. This system allows for the **secure delivery of all types of applications and any resulting permits**. The system is built in and stored in the cloud using the best available platforms and code for a secure and robust app. We hope you appreciate our efforts to reduce printed paper copies and deliver pertinent documents in a much more efficient way. If you're a client, you may use the portal to view all the applications that SOS Consulting, LLC has generated on behalf of you or your organization.

1

Open the SOS Consulting website at: www.sosconsulting.us

Click the **App Icon** in the upper right corner of the screen...

The secure **SOS Client & Affected Party Portal** site will open...

2

Become a user of the site by entering your email address and basic info for your profile – minimal information is required although we ask that you provide your company name so we may view who and which companies have reviewed a particular document.

(Please note that nothing is done with your information – it is only for access to this portal.)

Each time you log into the SOS Portal, you will be sent a pin code for **2-Step Verification** to your email within 15 seconds. Enter the code for access to the portal.

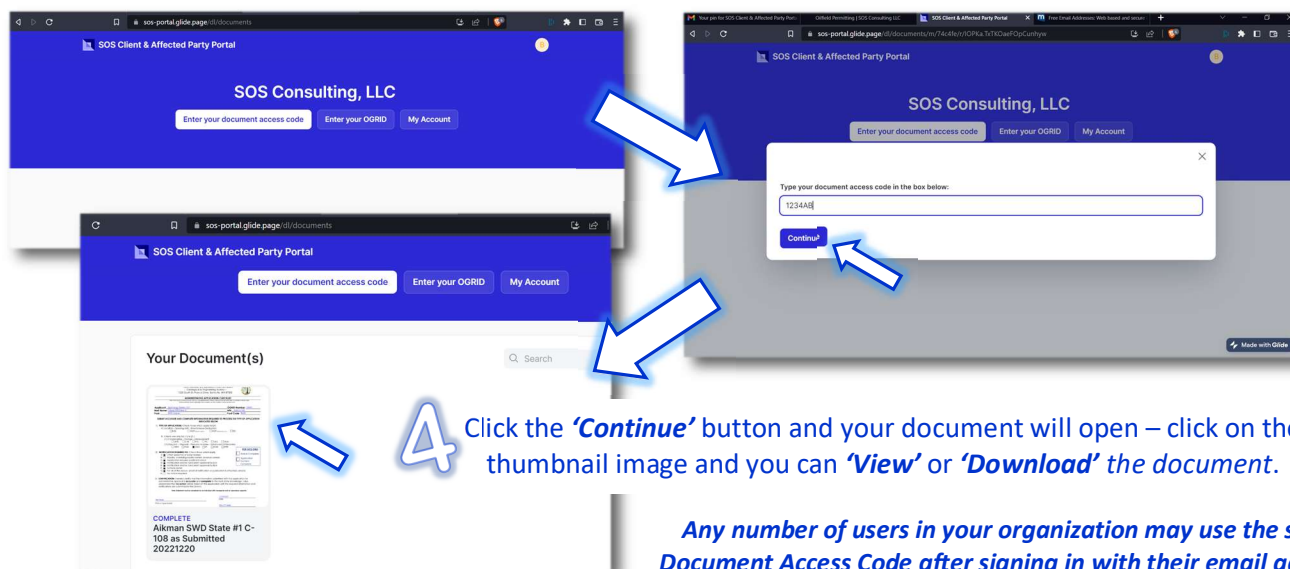

MOBILE ACCESS

3

The SOS portal will open to your user page or the portal home. If you don't see this screen, simply click on the SOS Client & Affected Party title and the home page will open. This page allows you to enter a 'Document Access Code' or if a client, 'Enter your OGRID'. (When entering an OGRID, you will also be prompted for a Client ID for security – SOS Consulting will have already provided this to its clients.)

Note: The unique Document Access Code is provided in your 'Notice Letter to Affected Parties'.

4

Click the 'Continue' button and your document will open – click on the thumbnail image and you can 'View' or 'Download' the document.

Any number of users in your organization may use the same Document Access Code after signing in with their email address!

|--|-------|
| <p>LEGAL NOTICE December 18, 2024</p> <p>Solaris Water Midstream, LLC, 9651 Katy Freeway, Suite 400, Houston, Texas, 77024, is filing Form C-108 (Application for Authority to Inject) with the New Mexico Oil Conservation Division seeking administrative approval for a salt water disposal well. The well, the North Lusk 32 State SWD No.1, (API 30-025-41525) is located 1550' FSL and 1800' FWL, Section 32, Township 18 South, Range 32 East, Lea County, New Mexico. Produced water from area production will be commercially disposed into the Brushy Canyon formation at a depth of 5,300' to 6,650' at a maximum surface pressure of 1060 psi with a maximum daily rate of 15,000 bwpd and an average daily rate of 8,500 bwpd. The proposed SWD well is located approximately 10.7 miles south/southwest of Maljamar, NM. The well was previously authorized for SWD by NMOCD order SWD-1394 and approval will effectively reinstate the well under a new permit for the new DMG interval.</p> <p>Interested parties wishing to object to the proposed application must file with the New Mexico Oil Conservation Division, 1220 St. Francis Dr., Santa Fe, NM 87505, (505)476-3460 within 15 days of the filing of the application which is expected 10 days from the date of this notice. Additional information may be obtained from the applicant's agent, SOS Consulting, LLC, (936)367-5950 or, email info@sosconsulting.us, #00296925</p> | |
