OIL CONSERVATION DIVISION**

**APPLICATION OF MANZANO LLC FOR
APPROVAL OF A PERMANENT PRESSURE
MAINTENANCE PROJECT,
LEA COUNTY, NEW MEXICO.**

Case No. 24927

**SELF-AFFIRMED STATEMENT
OF JOHN WORRALL**

1. I am employed by Manzano LLC ("Manzano") as a geologist. I am over 18 years of age, am competent to provide this Self-Affirmed Statement, and have personal knowledge of the matters addressed herein. I have previously testified before the New Mexico Oil Conservation Division ("Division"), and my credentials as an expert in petroleum geology matters were accepted and made a matter of record.

2. I am familiar with the Application in this case and with the matters pertaining to the Application.

3. Manzano's Application seeks an order approving the Jenkins San Andres Pressure Maintenance Project ("Project") as a permanent pressure maintenance project for the injection of produced gas through the Vince BGH #1 well into the San Andres formation in Section 30, Township 9 South, Range 35 East, Lea County, New Mexico.

4. Manzano filed its initial application in Case No. 22357 and provided testimony and exhibits at a Division hearing on December 2, 2021. At the hearing, the Examiners determined that the definition of the project required amendments and subsequent re-notice to affected parties.

5. Manzano then filed its amended application (Case No. 22458) on December 7, 2021, seeking authorization to: (1) establish a pressure maintenance project for the injection of produced gas into the San Andres formation in a project area comprised of the SE/4 and E/2 NE/4 of Section 30, and the E/2 SE/4 of Section 19, Township 9 South, Range 35 East, Lea County, New Mexico;

**Manzano LLC
Case No. 24927
Exhibit A**

(2) convert the Vince BGH No. 1 (API No. 30-025-37104) ("Well") from a vertical producing well to an injection well within the pressure maintenance project; and (3) inject produced gas from the Sodbuster 21 Fee #4 (API No. 30-025-43704) and Rag Mama 30-19 Fee #1 (API 30-025-44067) into the San Andres formation through a closed system using the Well. A copy of the application in Case No. 22458 is attached as **Exhibit A-1**.

6. On March 22, 2022, the Division entered Order No. R-22076 ("Order") approving the Project as a pilot project. A copy of the Order is attached as **Exhibit A-2**.

7. The Order: (1) authorizes Manzano to inject produced gas into the San Andres formation [Jenkins San Andres pool (Code 33950)] at a true vertical depth interval from approximately 4,840 feet to approximately 4,850 feet below the surface; (2) approves a Project Area of 320 acres, more or less, in the E/2 SE/4 of Section 19 and the SE/4 and E/2 NE/4 of Section 30, Township 9 South, Range 35 East, Lea County, New Mexico; (3) designates Manzano LLC as the operator of the Project; and (4) approves Manzano's request to convert the Well from a vertical producing well to an injection well.

8. The Order states that the approved injection interval for the Project shall be the San Andres formation P-1 dolomite; where the upper vertical limit is defined by the San Andres P-1 Marker to 160 feet below the marker, as shown in the High Resolution Laterolog for the injection well dated June 8, 2005.

9. The Order also approved the Sodbuster 21 Fee #4 (API No. 30-25-42704) and Rag Mama 30-19 Fee #1 (API No. 30-025-44067) wells as the sources of produced gas to be used in the injection phases of the Project and limited the maximum surface injection pressure for the Well to no more than 950 psi for produced gas.

10. Paragraph 19 of the Order states:

The authorizations provided in this order shall terminate three (3) years after the approval of the date of this order unless the operator applies for

approval of the Project as a permanent pressure maintenance project and OCD approves after a hearing on the application. The operator shall apply no later than three months prior to the termination date and shall provide a summary of the Project operation including documentation of observed benefits to production or the prevention of waste and evidence that injected fluid has not migrated beyond the horizontal and vertical boundaries of the Project Area.

11. **Exhibit A-3** is an area of review map of the Project Area that depicts the producing wells and other wells within the ½ mile radius areas of review that penetrate the proposed injection zone. The area of review map has not changed since Manzano filed its application in Case No. 22458 and the Order was issued. No new wells have been drilled in the area of review. The two (2) active wells in the area of review are operated by Manzano – the producing Rag Mama 30-19 Fee #1 (API No. 30-025-44067) and the injection well, the Manzano Vince BGH #1 (API No. 30-025-37104).

12. **Exhibit A-4** identifies surface and mineral ownership interests entitled to notice within the area of review and includes applicable lease numbers. There are no other operators within the ½ mile area of review radius.

13. Manzano has conducted a diligent search of all county public records, including phone directories and computer databases, as well as internet searches, to locate the interest owners within the area of review.

14. Since the Order was issued, Manzano has operated the Project and has observed benefits to production and the prevention of waste.

15. **Exhibit A-5** is a current wellbore diagram for the Vince Well.

16. As shown on **Exhibit A-6**, Manzano has injected 42,042 MCFG into the San Andres formation in the Vince Well. All of the gas has been produced by the Rag Mama and Sodbuster wells, both of which produce from the San Andres formation. During this time, the average surface injection pressure has been 124 psi and is holding fairly flat. The maximum surface injection

pressure for any one day in the month has averaged 301 psi, well below the maximum threshold of 950 psi, set by Order R-22076.

17. The Rag Mama Well is horizontally drilled from a surface hole location at 25' FSL and 528' FEL in Section 30, to a bottom hole location at 2,303' FSL and 394' FEL in Section 19. This is 2,305' southeast of the injection well, making it the closest active well to the Vince Well.

18. **Exhibit A-7** is a production decline curve for the Rag Mama Well, which shows the well has produced 140,139 BO and 146,778 MCFG through June 2024. The purpose of injecting gas into the Vince Well was to stabilize the San Andres formation pressure reduction, flatten the oil decline, and recover more of the oil in place. The production decline curve shows that the gas oil ratio and monthly gas production was increasing prior to injection, which is expected in reservoirs that have a dissolved gas drive, where more gas comes out of solution as the reservoir pressure drops. This has a negative impact to oil production, as more oil is left behind as pressure drops and more gas is produced. This chart clearly shows that the gas-oil ratio and monthly gas production has decreased since Manzano commenced injecting gas into the Vince Well, so the injected gas is not recycling. This is apparently due to the injected gas slowly increasing the reservoir pressure. A positive impact is reflected in oil production. Prior to injection, the monthly oil production was declining at an annual rate of 23.5%, and that has flattened to 18%. The continued injection of gas into the Vince Well will continue to increase reservoir pressure and allow for the recovery of more oil over time.

19. **Exhibit A-8** is a production decline curve for the Sodbuster Well, which is horizontally drilled from a surface hole location at 200' FSL and 1,650' FWL in Section 21, to a bottom hole location at 330' FNL and 1,650' FWL in Section 21. The Sodbuster Well has produced 55,928 BO and 67,735 MCFG. It is located outside of the area of review, approximately 1.8 miles northeast of the injection well. Manzano does not see that the Vince has had an impact yet to this

well's production, since it is much further away. The Rag Mama experienced the positive effects of pressure maintenance within the first year at a radius of 2305 ft from the injection well. I believe the Sodbuster well's production decline will experience the benefit of increased pressure within approximately four years, since it is four times further away.

20. Without approval of this application, Manzano would likely have to plug and abandon the Rag Mama and Sodbuster wells, because there are no alternatives to comply with the OCD methane gas rules in this area. This would result in a permanent waste of the oil and gas in these wells. Continued injection of the produced gas into the Vince Well will allow for the gas produced by the Rag Mama and Sodbuster wells to be safely stored in the reservoir while providing the benefit of pressure support.

21. As explained above, Manzano has operated the Project since the Order was issued and has observed benefits to production and the prevention of waste.

22. Since the Order was issued, as evidenced in the production of the Rag Mama 30 19 Fee #1H and Sodbuster 21 #4H wells, gas has not migrated beyond the horizontal and vertical boundaries of the Project Area.

23. From geologic studies performed over this area, the Project Area is well suited for pressure maintenance operations and the entire Project Area should continue to contribute enhanced recovery reserves.

24. There are no faults or other geologic impediments that would impede the efficiency of the Project.

25. Manzano's pressure maintenance project can be conducted in a safe and responsible manner without causing waste, impairing correlative rights or endangering fresh water, public health or the environment.

26. The attached exhibits were either prepared by me or under my supervision or were

compiled from company business records.

27. In my opinion, the granting of Manzano's application would serve the interests of conservation, the protection of correlative rights, and the prevention of waste.

28. I understand this Self-Affirmed Statement will be used as written testimony in this case. I affirm that my testimony above is true and correct and is made under penalty of perjury under the laws of the State of New Mexico. My testimony is made as of the date next to my signature below.

John Worral

10/22/2024
Date

**STATE OF NEW MEXICO
DEPARTMENT OF ENERGY, MINERALS AND NATURAL RESOURCES
OIL CONSERVATION DIVISION**

**APPLICATION OF MANZANO LLC
FOR APPROVAL OF A PRESSURE
MAINTENANCE PROJECT AND
AUTHORIZATION TO INJECT,
LEA COUNTY, NEW MEXICO.**

Case No. _____

APPLICATION

In accordance with NMAC 19.15.27.8, Manzano LLC ("Applicant") (OGRID No. 231429) files this application with the Oil Conservation Division for an order: (1) approving a pressure maintenance project for the injection of produced gas through the Vince BGH #1 well into the San Andres formation in a project area ("Project Area") comprised of the SE/4 and E/2NE/4 of Section 30, and the E/2SE/4 of Section 19, Township 9 South, Range 35 East, NMPM, Lea County, New Mexico; and (2) authorizing Manzano to convert the Vince BGH #1 well from a producing well to an injector. In support of its application, Applicant states:

1. Applicant operates the following described wells within or near the Project Area:
 - the **Sodbuster 21 Fee #4H** (API 30-025-43704) with a surface hole location at 200 FSL, 1650 FWL of Section 21 and a bottom hole location at 330 FNL, 1650 FWL of Section 21;
 - the **Rag Mama 30-19 Fee #1** (API 30-025-44067) with a surface hole location at 25 FSL, 528 FEL of Section 30 and a bottom hole location at 2303 FSL, 394 FEL of Section 19; and
 - The **Vince BGH No. 1H** (API No. 30-025-37104) located at 1980 FSL, 1750 FEL (Unit J) of Section 30.
2. The wells are currently producing from the Jenkins San Andres Pool (Pool No. 33950).

**Manzano LLC
Case No. 24927
Exhibit A-1**

3. Applicant proposes to convert its Vince BGH No. 1H well from a producer into an injection well for pressure maintenance operations. Applicant plans to inject produced gas from the Sodbuster 21 Fee #4 and Rag Mama 30-19 Fee #1 into the San Andres formation through a closed system using the Vince BGH No. 1H. Applicant does not anticipate compatibility issues.

4. The injection interval of the Vince BGH No. 1H is 4840 feet to 4850 feet.

5. Injection will provide pressure maintenance support for the Rag Mama 30 19 Fee #1 well and will also reduce flaring.

6. The expected average injection rate of produced gas into the Vince BGH No. 1H is 150 MCFGPD. The expected maximum injection rate is 1,000 MCFGPD to provide Manzano the option to inject more gas as the GOR increases or if Manzano drills additional wells in the Jenkins San Andres Pool.

7. The expected average injection pressure of produced gas into the Vince BGH No. 1H is 500 psi and the proposed maximum injection pressure is 950 psi.

8. Applicant's proposed pressure maintenance project can be conducted in a safe and responsible manner without causing waste, impairing correlative rights or endangering fresh water, public health or the environment.

9. Approval of this application will be in the best interest of conservation, the prevention of waste and the protection of correlative rights.

10. A copy of the applicable C-108 is attached as Exhibit A.

WHEREFORE, Applicant requests this application be set for hearing on January 6, 2022, and after notice and hearing, the Division enter an order: (1) approving a pressure maintenance project for the injection of produced gas through the Vince BGH #1 well into the San Andres formation in the Project Area; and (2) authorizing Manzano to convert the Vince BGH #1 well from a producer to an injector.

Respectfully submitted,

HINKLE SHANOR LLP

Counsel for Manzano LLC

**STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION**

**APPLICATION OF MANZANO LLC FOR APPROVAL OF A PRESSURE
MAINTENANCE PROJECT AND AUTHORIZATION TO INJECT, LEA
COUNTY, NEW MEXICO.**

**CASE NO. 22458
CASE NO. 22357
ORDER NO. R-22076**

ORDER OF THE DIVISION

This case came for hearing before the Oil Conservation Division (“OCD”) at 8:15 a.m. on January 6, 2022, in Santa Fe, New Mexico.

The OCD Director, having considered the testimony, the record, the recommendations of Hearing Examiner Dylan Rose-Coss, adopts these findings of fact, and conclusions of law and issues this Order.

FINDINGS OF FACT

1. Due notice has been given, and the OCD has jurisdiction of the subject matter of this case.
2. In the application filed December 7, 2021 (“Application”), Manzano LLC (“Applicant” or “Manzano”) seeks the following:
 - a. To establish a pressure maintenance project (“Project”) for the injection of produced gas into the San Andres formation in the project area comprised of the SE/4 and E/2 NE/4 of Section 30, and the E/2 SE/4 of Section 19, Township 9 South, Range 35 East, NMPM, Lea County, New Mexico (“Project Area”); and
 - b. To authorize Manzano to convert the Vince BGH No. 1 (API No. 30-025-37104; “Well”) from a vertical producing well to an injection well within the pressure maintenance project.
3. Applicant plans to inject produced gas from the Sodbuster 21 Fee No. 4 (API No. 30-025-43704) and Rag Mama 30-19 Fee No. 1 (API No. 30-025-44067) into the San Andres formation through a closed system using the Vince BGH No. 1.

**Manzano LLC
Case No. 24927
Exhibit A-2**

Case No. 21996

Order No. R-22076

Page 2 of 6

4. No other party appeared at the hearing or otherwise opposed the application.

5. Applicant previously opened Case No. 22357 and provided testimony and exhibits at the OCD hearing on December 2, 2021. This prior hearing was to consider the approval for the proposed injection project being sought in the Application. At hearing the Examiners determined that the definition of the project area required amendments and subsequent re-notice to affected parties. However, since the subject matter of both cases are identical, the OCD has consolidated the two cases to be addressed in this single hearing order.

6. At the hearings on December 2, 2021 and January 6, 2022, Applicant appeared through counsel and presented engineering testimony and exhibits through affidavit to the effect that:

- a. In this area of Lea County, the P-1 dolomite is a productive interval within the San Andres formation and is well delineated and characterized.
- b. The proposed Project Area is currently producing from a single pool, the Jenkins San Andres Pool (Pool 33950).
- c. The Project Area is comprised of two fee mineral leases with Manzano as the Division designated operator.
- d. There are no faults or other geologic impediments that would impede the efficacy of the Project.
- e. The current review of the Area of Review ("AOR") for the Project Area showed all active and abandoned wells that penetrate the injection interval are properly plugged as to prevent vertical migration of injected fluids.
- f. The Well is currently producing 2 barrels of oil and 31 barrels of water per day which the Applicant has assessed as uneconomical.
- g. A ten-day shut-in test of the Well demonstrated a current bottom-hole pressure of 378 pounds per square inch ("psi") within the injection interval and that the original bottom-hole pressure was calculated at 1697 psi.
- h. Applicant estimated that injection of produced gas into the Well will have a limited impact for enhancing the production on the adjacent horizontal well, Rag Mama 30-19 Fee No. 1.
- i. Applicant stated that there is no pipeline connection for transportation of gas produced from recently completed horizontal wells and requires the flaring for continued production. Additionally, the applicant stated that the produced gas is of such poor quality that it does not meet current pipeline specifications for sale.

Case No. 21996

Order No. R-22076

Page 3 of 6

- j. Applicant provided evidence of proper notice under 19.15.26.8 NMAC as required for approval of project.
7. Applicant provided supplemental information in response to the Examiner's questions on the spacing unit of the well, the injection boundaries, proposed volume of gas to be injected and information on the proposed maximum surface injection pressures for produced gas.

CONCLUSIONS OF LAW

8. The operation of the pressure maintenance unit during the period will be as a pilot project to demonstrate the feasibility of the project as enhanced recovery without evidence of fluid migration out of the approved injection interval or the lateral boundary of the Project Area
9. All the wells (active and plugged) in the one-half mile modified AOR surrounding the proposed injection well appear to be adequately cased and cemented, so that none will become a conduit for the escape of injected fluid or gas from the permitted injection formation. Accordingly, there is no requirement for remedial work on any wells within the modified AOR for each of the injection wells.
10. OCD records indicate Manzano LLC (OGRID 231429) as of the date of this order is in compliance with Rule 19.15.5.9 NMAC.
11. Applicant should be authorized to inject fluids at a surface injection pressure not to exceed 950 psi for produced gas. Applicant may apply to the OCD for a higher injection pressure upon satisfactorily demonstrating that an increase in injection pressure will not result in fracturing of the injection formation or confining strata.
12. The proposed project will, in reasonable probability, serve the interest of conservation, prevent waste, and will not impair correlative rights.
13. Accordingly, the Application should be approved as a pilot project with a requirement for review at a future hearing.

ORDER

1. Manzano LLC ("operator") is hereby authorized to inject produced gas into the San Andres formation [Jenkins San Andres pool (Pool code: 33950)], at a true vertical depth interval from approximately 4840 feet to approximately 4850 feet below the surface.
2. The Project Area shall consist of 320 acres, more or less, of the following lands in Lea County, New Mexico:

Case No. 21996

Order No. R-22076

Page 4 of 6

Township 9 South, Range 35 East, NMPM

Section 19: E/2 SE/4

Section 30: SE/4 and E/2 NE/4

3. This project is hereby designated the **Jenkins San Andres Pressure Maintenance Project** ("Project").

4. Manzano LLC (OGRID 231429) is designated the operator of the Project.

5. The existing vertical well approved for injection within this Project is the Vince BGH No. 1 (API No. 30-025-37104; "injection well") with a surface location of 1980 feet from the South line and 1750 feet from the East line (Unit letter J) of Section 30, Township 9 South, Range 35 East, NMPM.

6. The injection interval for the Project, shall be the San Andres formation P-1 dolomite; where the upper vertical limit is defined by the San Andres P-1 Marker to 160 feet below the marker, as shown in the High Resolution Laterolog for the injection well dated June 8, 2005.

7. The operator shall take all steps necessary to ensure that the injected fluid enters only the injection interval and is not permitted to escape to other formations or onto the surface from injection, production, or plugged and abandoned wells.

8. The injection well shall use the existing construction with injection occurring through perforations currently in place from a measured depth of 4840 feet to a measured depth of 4850 feet.

9. The operator shall utilize its Sodbuster 21 Fee No. 4 (API No. 30-025-43704) and Rag Mama 30-19 Fee No. 1 (API No. 30-025-44067) wells as the source of the produced gas to be used in the injection phases of the Project. Additional sources of produced gas from operator leases may be administratively approved for the Project after having demonstrated gas composition and compatibility. Operator shall submit the required information along with well information using Form C-103 through E-permitting.

10. The injection well shall be equipped with a pressure control device or acceptable substitute that will limit the maximum surface injection pressure **to no more than 950 psi for produced gas.**

11. The OCD Director shall have the authority to administratively authorize an increase in injection pressure upon a showing supported by an approved Step-Rate Tests (using only water) that such higher pressure will not result in fracturing of the injection formation or confining strata. The operator shall give at least 72 hours advance notice to the appropriate Inspection Supervisor of the date and time

i. injection equipment will be installed, and

Case No. 21996

Order No. R-22076

Page 5 of 6

- ii. the mechanical integrity pressure test will be conducted, so these operations may be witnessed.

12. Injection shall be accomplished through tubing installed in a packer set in the production casing so as to provide a proper seal while being as close as practical to the uppermost injection perforations. The limit for the placement of the packer in the production casing shall be less than 100 feet above the uppermost perforation of the injection well.

13. The casing-tubing annulus shall be filled with an inert fluid. Operator shall continuously monitor the annulus including a gauge attached to the annulus in order to detect leakage in the casing, tubing or packer.

14. The injection well shall pass a mechanical integrity test prior to recommencement of injection under this order and prior to resumption of injection each time the packer is unseated. All testing procedures and schedules shall conform to the requirements of Rule 19.15.26.11(A) NMAC. The OCD Director retains the right to require at any time wireline verification of completion and packer setting depths.

15. The operator shall immediately notify the OCD's Inspection Supervisor of the failure of the tubing, casing or packer in either injection well, or the leakage of water, oil, gas or other fluid from or around any producing or abandoned well within one-half mile of either injection well and shall take all steps as may be timely and necessary to correct such failure or leakage. If the monitoring system indicates communication of the tubing with the annulus due to loss of mechanical integrity, the operator shall immediately proceed to shut-in the injection well and notify the Inspection Supervisor.

16. The operator shall provide written notice using Form C-103 submitted through E-permitting of the date of commencement of injection into the injection well.

17. The Project shall be governed by Rules 19.15.26.8 through 19.15.26.15 NMAC. The operator shall submit electronic monthly reports of the injection operations on OCD Form C-115, in accordance with Rules 19.15.26.13 and 19.15.7.24 NMAC.

18. The injection authority granted herein shall terminate one year after the effective date of this order if the operator has not commenced injection operations; provided, however, the OCD, upon written request by the operator filed prior to the expiration of the two-year time period, may grant an extension for good cause.

19. The authorizations provided in this order shall terminate three (3) years after the approval date of this order unless the operator applies for approval of the Project as a permanent pressure maintenance project and OCD approves after a hearing on the application. The operator shall apply no later than three months prior to the termination date and shall provide a summary of the Project operation including documentation of observed benefits to production or the prevention of waste and evidence that injected fluid has not migrated beyond the horizontal and vertical boundaries of the Project Area.

Case No. 21996
Order No. R-22076
Page 6 of 6

20. The injection authority granted herein shall be subject to 19.15.26.12(C)(1) NMAC [Abandonment of injection authority]. If necessary due to operational requirements that all injection wells in the Project are simultaneously not injecting for a continuous one-year period, the operator shall maintain the injection authority of the order by requesting an extension as provided in 19.15.26.12(C)(2) NMAC.
21. The OCD Director must authorize alternative or additional injection wells within the Project Area through the OCD hearing process and as provided in 19.15.26.8 NMAC.
22. The operator shall provide written notice to the OCD upon permanent cessation of injection into the Project.
23. Case No. 22357 is hereby dismissed with the approval of this order.
24. This order does not relieve the operator of responsibility should its operations cause any actual damage or threat of damage to protectable fresh water, human health or the environment; nor does it relieve the operator of responsibility for complying with applicable OCD rules or other state, federal or local laws or regulations.
25. Upon failure of the operator to conduct operations (1) in such manner as will protect fresh water or (2) in a manner consistent with the requirements in this Order, the OCD may, after notice and hearing (or without notice and hearing in event of an emergency, subject to the provisions of NMSA 1978 Section 70-2-23), terminate the injection authority granted herein.
26. Jurisdiction of this case is retained for the entry of such further orders as the OCD may deem necessary.

DONE at Santa Fe, New Mexico, on this 22 day of March, 2022.

Manzano LLC
 Case No. 24927
 Exhibit A-6

Production History of the Rag Mama 30 19 Fee #1H

Section 30-T9S-R35E, SESE, API 30-025-44067

Cumulative Production as of 7/1/2024 is 140,183 BO and 146,776 MCFG

Manzano LLC
Case No. 24927
Exhibit A-7

Manzano injects the gas produced from this well into the Vince. This chart clearly shows that since injection of the gas into the Vince, this nearest producing well is not recycling the injected gas. Instead the injection of gas is having the desired effect to increase reservoir pressure, thereby decreasing gas coming out of solution, and flattening oil production decline.

Production History of the Manzano Sodbuster 21 Fee #4H
Section 21-T9S-R35E, SESW, API 30-025-43704
Cumulative Production as of 7/1/2024 is 55,928 BO and
67,735 MCFG

Manzano LLC
Case No. 24927
Exhibit A-8

Manzano also injects the gas produced from this well into the Vince. This well has not experienced an oil production uplift yet from a pressure effect due to the injection of gas into the Vince BGH #1. This is because it is located 1.8 miles to the NE of the injection well. However, it does benefit from the Vince in a second way in that injection of the produced gas allows Manzano to continue to not flare the produced gas. There are no commercial pipeline alternatives to allow Manzano to produce the gas from these two San Andres wells, and Manzano would otherwise have to plug and abandon them.

CASE NO. 24927

**SELF-AFFIRMED STATEMENT
OF DANA S. HARDY**

1. I am attorney in fact and authorized representative of Manzano LLC., the Applicant herein.
2. I am familiar with the Notice Letter attached as **Exhibit B-1** and caused the Notice Letter, along with the Application in this case, to be sent to the parties set out in the chart attached as **Exhibit B-2**.
3. Exhibit B-2 also provides the date each Notice Letter was sent and the date each return was received.
4. Copies of the certified mail green cards and white slips are attached as **Exhibit B-3** as supporting documentation for proof of mailing and the information provided on Exhibit B-2.
5. On October 18, 2024, I caused a notice to be published in the Hobbs News - Sun. An Affidavit of Publication from the Legal Clerk of the Hobbs News - Sun along with a copy of the notice publication, is attached as **Exhibit B-4**.
6. I understand this Self-Affirmed Statement will be used as written testimony in the subject case. I affirm that my testimony above is true and correct and is made under penalty of perjury under the laws of the State of New Mexico. My testimony is made as of the date handwritten next to my signature below.

VIA CERTIFIED MAIL
RETURN RECEIPT REQUESTED**TO ALL PARTIES ENTITLED TO NOTICE****Re: Case No. 24927– Application of Manzano LLC for Approval of a Permanent Pressure Maintenance Project, Lea County, New Mexico.**

To whom it may concern:

This letter is to advise you that the enclosed application was filed with the New Mexico Oil Conservation Division. The hearing will be conducted on **November 7, 2024**, beginning at 8:30 a.m.

The hearing will be conducted in a hybrid fashion, both virtually and in-person at the Energy, Minerals, Natural Resources Department, Wendell Chino Building, Pecos Hall, 1220 South St. Francis Drive, 1st Floor, Santa Fe, NM 87505. To participate virtually, see the instructions posted on the OCD Hearings website: <https://www.emnrd.nm.gov/ocd/hearing-info/>. You are not required to attend this hearing, but as an owner of an interest that may be affected by this application, you may appear and present testimony. Failure to appear at that time and become a party of record will preclude you from challenging the matter at a later date.

Pursuant to Division Rule 19.15.4.13.B, a party who intends to present evidence at the hearing shall file a pre-hearing statement and serve copies on other parties, or the attorneys of parties who are represented by counsel, at least four business days in advance of a scheduled hearing, but in no event later than 5:00 p.m. Mountain Time, on the Thursday preceding the scheduled hearing date. The statement must be submitted through the OCD E-Permitting system (<https://wwwapps.emnrd.nm.gov/ocd/ocdpermitting/>) or via e-mail to ocd.hearings@emnrd.nm.gov and should include: the names of the parties and their attorneys, a concise statement of the case, the names of all witnesses the party will call to testify at the hearing, the approximate time the party will need to present its case, and identification of any procedural matters that are to be resolved prior to the hearing.

If you have any questions about this application, please contact John Worrall, Landman at Manzano, LLC, via e-mail at jworrall@manzanoenergy.com if you have any questions regarding this matter.

Sincerely,

/s/ Dana S. Hardy

Kerr; D.A. Glenn Family, LLC; Glenda R. Lancaster; Nancy Richburg; James H. Simmons; Sherry McCray, Trustee of the McCray Family Trust; Melissa Glenn; Bonnie Downing; Michael Goolsby; Dolores Davis; Don Glenn; Clark A. Glenn; Carolyn Taylor; Rex Glenn; Marilyn K Glenn, SSP, widow of Gerald Glenn, Deceased; Cliff Glenn; Scott Alan Frost; William E. Glenn, Jr.; Patricia Horton; and their successors and assigns, that the New Mexico Oil Conservation Division will conduct a hearing on the application submitted by Manzano LLC. The hearing will be conducted on November 7, 2024, in a hybrid fashion, both virtually and in-person at the Energy, Minerals, Natural Resources Department, Wendell Chino Building, Pecos Hall, 1220 South St. Francis Drive, 1st Floor, Santa Fe, NM 87505. To participate virtually, see the instructions posted on the OCD Hearings website: <https://www.emnrd.nm.gov/ocd/hearing-info/>. Manzano LLC, ("Applicant"), seeks an order approving the Jenkins San Andres Pressure Maintenance Project ("Project") as a permanent pressure maintenance project for the injection of produced gas through the Vince BGH #1 well into the San Andres formation in Section 30, Township 9 South, Range 35 East, Lea County, New Mexico. On March 22, 2022, the Division entered Order No. R-22076 ("Order") approving the Project as a pilot project. The Order: (1) authorizes Manzano to inject produced gas into the San Andres formation (Jenkins San Andres pool (Code 33950)) at a true vertical depth interval from approximately 4,840 feet to approximately 4,850 feet below the surface; (2) approves a Project Area of 320 acres, more or less, in the E/2 SE/4 of Section 19 and the SE/4 and E/2 NE/4 of Section 30, Township 9 South, Range 35 East, Lea County, New Mexico; (3) designates Manzano LLC as operator of the Project; and (4) approves Manzano's request to convert the Vince BGH No. 1 (API No. 30-025-37104) ("Well") from a vertical producing well to an injection well. The Order states that the authorizations provided therein shall terminate three (3) years after approval unless the Oil Conservation Division approves of the Project as a permanent pressure maintenance project following a hearing. In accordance with the Order, Manzano requests that the Division issue an order approving the Project as a permanent pressure maintenance project. The Project is located approximately 18.1 miles north of Tatum, New Mexico.
