STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

APPLICATION OF MR NM OPERATING LLC FOR COMPULSORY POOLING, LEA COUNTY, NEW MEXICO.

CASE NO. 25642

AMENDED NOTICE OF INTERVENTION TO PROCEEDING BY AFFIDAVIT

Per the Hearing Examiner's request at the October 9, 2025 hearing, Mack Energy Corp ("Mack") hereby submits this amended notice of intervention in the above-referenced case and currently withdraws its objection. In support of this notice Mack states:

- 1. MR NM Operating LLC's ("MR NM") Case No. 25642 seeks to pool the Yeso formation underlying the SE/4 of Section 31 and the SW/4 of Section 32, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico.¹
- 2. Mack has approved drilling permits² and development plans that MR NM's proposed development will partially overlap. *See* Exhibit A. Further, Mack recently sent well proposals and AFEs to interest owners. *See* Exhibit B. Plus, as stated on the record during the October 9, 2025 hearing, Mack filed a competing compulsory pooling application. *See* Exhibit C.
- 3. The overlapping acreage between the two competing applications is in the S/2 SE/4 of Section 31. Neither MR NM nor Mack own an interest in this acreage.

¹ Mack did not receive notice of MR NM's compulsory pooling application because it does not own an interest in MR NM's proposed spacing unit and, therefore, is not an affected party and is why Mack is filing a notice of intervention rather than an entry of appearance.

² At the October 9, 2025 hearing, counsel for MR NM argued that Mack's permits should be rescinded or rejected by the Division because Mack pre-maturely signed the operator certification on the C-102s that were included with its permits. However, this was merely an error that Mack intends to correct. MR NM presented no evidence at the hearing that the well location information or plat contained within the C-102s was inaccurate, nor not relevant or reliable. *See* Contested Case Nos. 25462-25465, 25466, 25541-25542, Tr. 10/10/25, page 135, lines 12-23.

- 4. The parties are currently engaged in good faith negotiations and MR NM continued its case to the November 13, 2025 docket.
- 5. Since Mack has approved drilling permits, has sent proposals and AFEs to interest owners, and filed a competing pooling application, Mack's participation in this case will contribute substantially to the prevention of waste and the protection of correlative rights. *See* NMRA 19.15.4.11.

Respectfully submitted,

Note: No allowable will be assigned to this completion until all interests have been consolidated or a non-standard unit has been approved by the division.

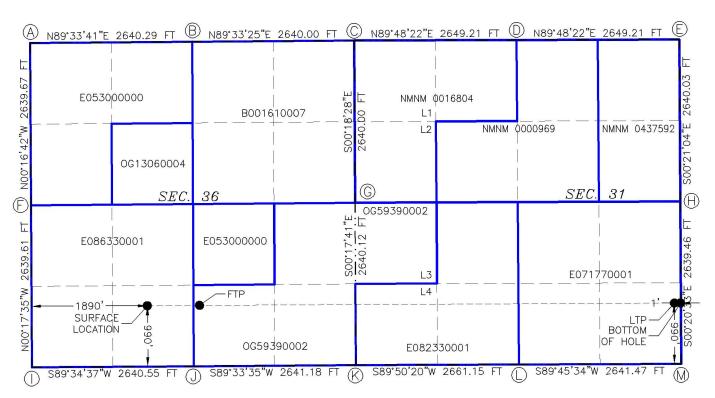

Email Address

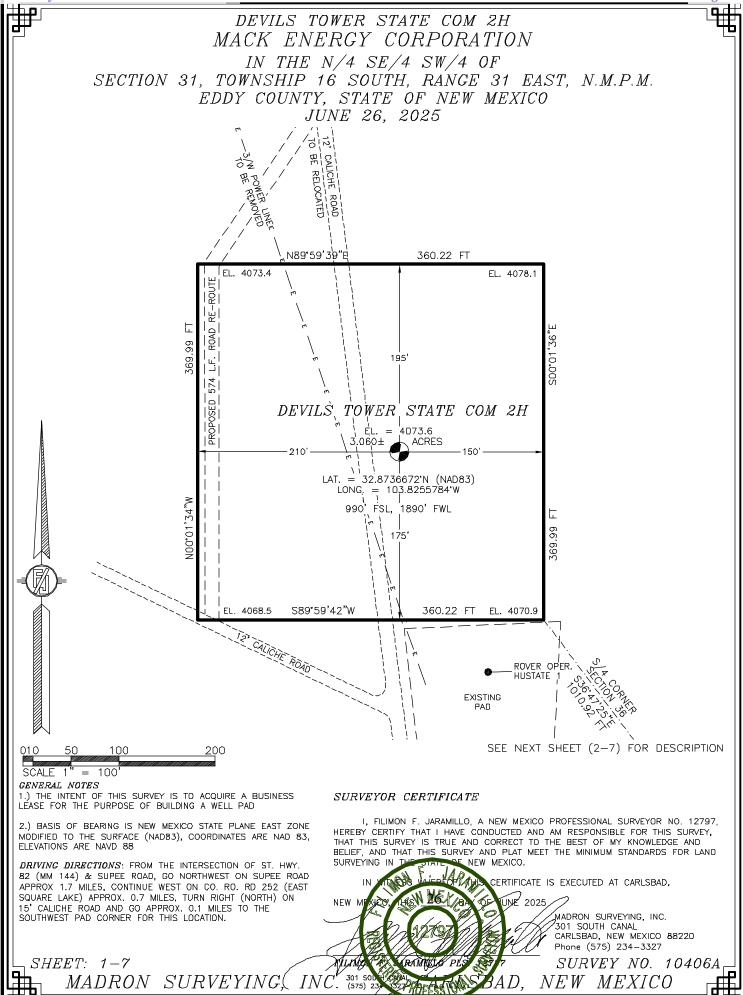

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

V. Anticipated Schedule proposed to be recompleted. Well Name			TD Reached	ntral delivery point. Completio	n	Initial I	Flow	First Production
			Date	Commencemen	t Date	Back I	Date	Date
Devils Tower B State Com 2H		9/1/2025	9/21/2025	10/21/2025		10/21/20	25	10/21/2025
VI. Separation Equipment: Attach a complete description of how Operator will size separation equipment to optimize gas capture. VII. Operational Practices: Attach a complete description of the actions Operator will take to comply with the requirements of Subsection A through F of 19.15.27.8 NMAC. VIII. Best Management Practices: Attach a complete description of Operator's best management practices to minimize venting during active and planned maintenance.								

Section 2 – Enhanced Plan EFFECTIVE APRIL 1, 2022

Beginning April 1, 2022, an operator that is not in compliance with its statewide natural gas capture requirement for the applicable reporting area must complete this section.

Departor certifies that it is not required to complete this section because Operator is in compliance with its statewide natural gas capture requirement for the applicable reporting area.

IX. Anticipated Natural Gas Production:

Well	API	Anticipated Average Natural Gas Rate MCF/D	Anticipated Volume of Natural Gas for the First Year MCF

X. Natural Gas Gathering System (NGGS):

Operator	System	ULSTR of Tie-in	Anticipated Gathering Start Date	Available Maximum Daily Capacity of System Segment Tie-in
				-

XI. Map. Attach an accurate and legible map depicting the location of the well(s), the anticipated pipeline route(s) connecting the
production operations to the existing or planned interconnect of the natural gas gathering system(s), and the maximum daily capacity of
the segment or portion of the natural gas gathering system(s) to which the well(s) will be connected.

XII. Line Capacity. The natural	gas gathering system 🗆 w	vill □ will not have	capacity to gather	100% of the anticipated	natural gas
production volume from the well p	prior to the date of first pro	oduction.			

XIII. Line Pressure. Operator \square does \square does not anticipate that its existing well(s) connected to the same segment, or portion,	of the
natural gas gathering system(s) described above will continue to meet anticipated increases in line pressure caused by the new we	ll(s).

_							
ΙΙΔ.	ttach One	rator's n	lan to mana	ge production	in response t	to the increase	d line pressure

XIV. Confidentiality: \square Operator asserts confidentiality pursuant to Section 71-2-8 NMSA 1978 for the informa	non provided in
Section 2 as provided in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and attaches a full description of the spec	ific information
for which confidentiality is asserted and the basis for such assertion.	

(h)

(i)

Section 3 - Certifications Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal: 🗷 Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system: or ☐ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. If Operator checks this box, Operator will select one of the following: Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or Venting and Flaring Plan.

Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including: power generation on lease; (a) power generation for grid; (b) (c) compression on lease; (d) liquids removal on lease; reinjection for underground storage; (e) **(f)** reinjection for temporary storage; **(g)** reinjection for enhanced oil recovery;

Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

other alternative beneficial uses approved by the division.

fuel cell production; and

- (a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or
- (b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.
- 2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

VI. Separation Equipment:

Mack Energy Corporation(MEC) production facilities include separation equipment designed to efficiently separate gas from liquid phases to optimize gas capture based on projected and estimated volumes from the targeted pool of our completion project. MEC will utilize flowback separation equipment and production separation equipment designed and built to industry specifications after the completion to optimize gas capture and send gas to sales or flare based on analytical composition. MEC operates facilities that are typically multi-well facilities. Production separation equipment is upgraded prior to new wells being completed, if determined to be undersized or inadequate. This equipment is already on-site and tied into our sales gas lines prior to the new drill operations.

VII. Operational Practices:

- Subsection (A) Venting and Flaring of Natural Gas. MEC understands the requirements of NMAC 19.15.27.8 which outlines that the venting and flaring of natural gas during drilling, completion or production operations that constitutes waste as defined in 19.15.2 are prohibited.
- 2. Subsection (B) Venting and Flaring during drilling operations. This gas capture plan isn't for a well being drilled.
- 3. Subsection (C) Venting and flaring during completion or recompletion. Flowlines will be routed for flowback fluids into a completion or storage tank and if feasible under well conditions, flare rather than vent and commence operation of a separator as soon as it is technically feasible for a separator to function.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
- 4. Subsection (D) Venting and flaring during production operations o At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
 - Monitor manual liquid unloading for wells on-site or in close proximity (<30 minutes' drive time), take reasonable actions to achieve a stabilized rate and pressure at the earliest practical time, and take reasonable actions to minimize venting to the maximum extent practicable.
 - MEC will not vent or flare except during the approved activities listed in NMAC 19.15.27.8 (D)
 14.
- 5. Subsection (E) Performance standards \circ All tanks and separation equipment are designed for maximum throughput and pressure to minimize waste.
 - If a flare is utilized during production operations it will have a continuous pilot and is located more than 100 feet from any known well or storage tanks.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.

- 6. Subsection (F) Measurement or estimation of vented and flared natural gas o Measurement equipment is installed to measure the volume of natural gas flared from process piping.
 - When measurement isn't practicable, estimation of vented and flared natural gas will be completed as noted in 19.15.27.8 (F) 5-6.

VIII. Best Management Practices:

- 1. MEC has adequate storage and takeaway capacity for wells it chooses to complete as the flowlines at the sites are already in place and tied into a gathering system.
- 2. MEC will flare rather than vent vessel blowdown gas when technically feasible during active and/or planned maintenance to equipment on-site.
- 3. MEC combusts natural gas that would otherwise be vented or flared, when technically feasible.
- 4. MEC will shut in wells in the event of a takeaway disruption, emergency situation, or other operations where venting or flaring may occur due to equipment failures.
- 5. MEC has a gas gathering system in place(CTB-887)a with multiple purchaser's to limit venting or flaring, due to purchaser shut downs.

CertificateNumber Date of Survey

PLS 12797 JUNE 26, 2025

SURVEY NO. 10405A

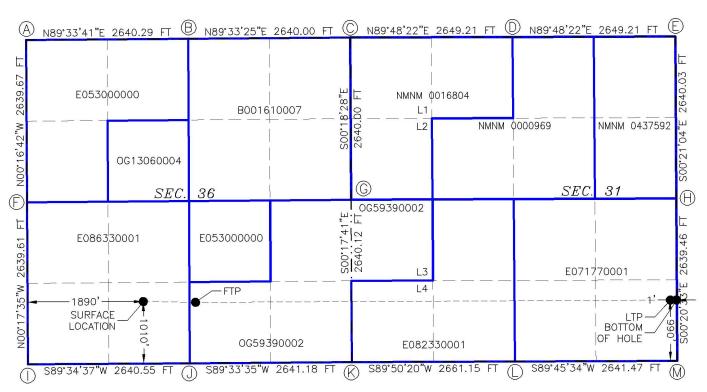

Note: No allowable will be assigned to this completion until all interests have been consolidated or a non-standard unit has been approved by the division.

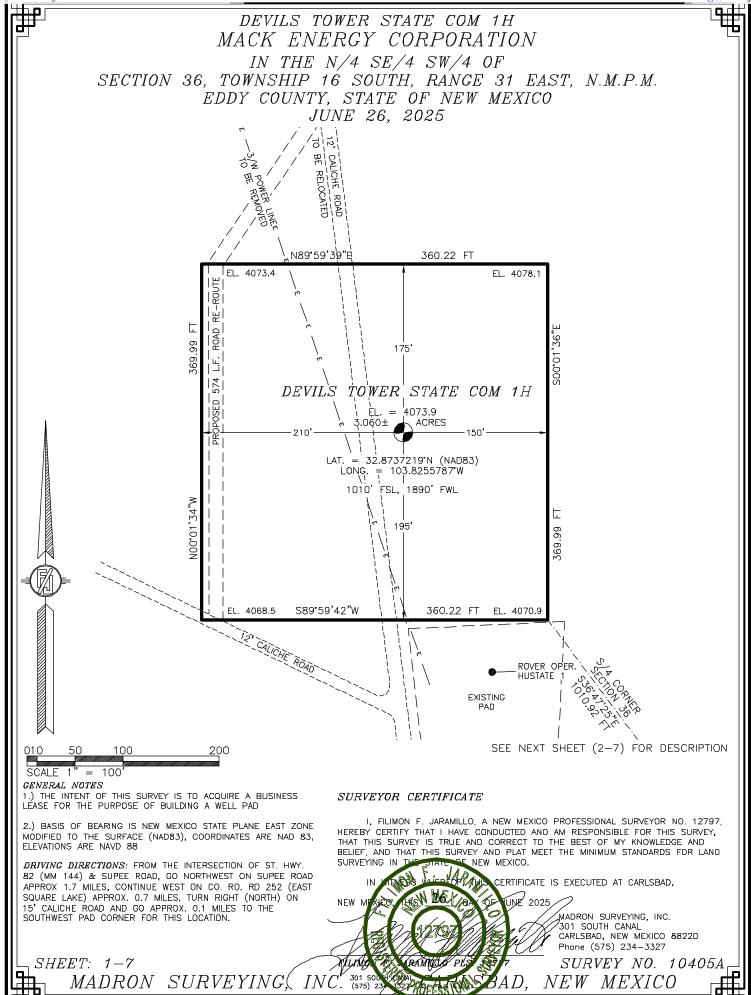

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

Operator Name and Address:	API Number:
MACK ENERGY CORP [13837]	30-015-56931
P.O. Box 960	Well:
Artesia, NM 882110960	DEVILS TOWER STATE COM #001H

OCD Reviewer	Condition
jeffrey.harrison	If using a pit for drilling and completion operations, operator must have an approved pit form prior to spudding the well. If a closed loop is to be utilized, please submit a form C-103A change of plans stating such.
jeffrey.harrison	Notify the OCD 24 hours prior to casing & cement.
jeffrey.harrison	A [C-103] Sub. Drilling (C-103N) is required within (10) days of spud.
jeffrey.harrison	File As Drilled C-102 and a directional Survey with C-104 completion packet.
jeffrey.harrison	Once the well is spud, to prevent ground water contamination through whole or partial conduits from the surface, the operator shall drill without interruption through the fresh water zone or zones and shall immediately set in cement the water protection string.
jeffrey.harrison	Cement is required to circulate on both surface and intermediate1 strings of casing.
jeffrey.harrison	If cement does not circulate on any string, a Cement Bond Log (CBL) is required for that string of casing.
jeffrey.harrison	Oil base muds are not to be used until fresh water zones are cased and cemented providing isolation from the oil or diesel. This includes synthetic oils. Oil based mud, drilling fluids and solids must be contained in a steel closed loop system.
jeffrey.harrison	Surface casing shall be set a minimum of 25' into the Rustler Anhydrite, above the salt, and below usable fresh water and cemented to the surface. If salt is encountered set casing at least 25 ft. above the salt.

VI. Separation Equipm VII. Operational Pract Subsection A through F VIII. Best Managemen during active and planne	ices: Attacof 19.15.27.8 t Practices:	ch a complete desc NMAC. ☑ Attach a comple	riptio	on of the ac	tions Operator wil	ll take t	o comply	with t	he requirements of

Section 2 – Enhanced Plan EFFECTIVE APRIL 1, 2022

Beginning April 1, 2022, an operator that is not in compliance with its statewide natural gas capture requirement for the applicable reporting area must complete this section.

Departor certifies that it is not required to complete this section because Operator is in compliance with its statewide natural gas capture requirement for the applicable reporting area.

IX. Anticipated Natural Gas Production:

Well	API	Anticipated Average Natural Gas Rate MCF/D	Anticipated Volume of Natural Gas for the First Year MCF

X. Natural Gas Gathering System (NGGS):

Operator	System	ULSTR of Tie-in	Anticipated Gathering	Available Maximum Daily Capacity
			Start Date	of System Segment Tie-in

XI. Map. \square Attach an accurate and legible map depicting the location of the well(s), the anticipated pipeline route(s) connecting the
production operations to the existing or planned interconnect of the natural gas gathering system(s), and the maximum daily capacity of
the segment or portion of the natural gas gathering system(s) to which the well(s) will be connected.

XII.	Line Capaci	ty. The natural	gas gathering	system \square	will □ will	not have	capacity to	gather	100% of th	ne anticipated	natural ga	ıs
prod	uction volum	e from the well	prior to the da	te of first p	production.							

XIII. Line Pressure. Operator \square does \square does not anticipate that its existing well(s) connected to the same segment, or portion, of	f the
natural gas gathering system(s) described above will continue to meet anticipated increases in line pressure caused by the new well	(s).

_								
\Box	A 44 1 4	O 4	9 1 4		1 4	•	4 41 .	sed line pressure
	A Hach I	Inerator	c nian to	manage n	radiietian	in rechance	TO THE INCRESS	sea line nressiire

XIV. Confidentiality: Operator asserts confidentiality pursuant to Section 71-2-8 NMSA 1978 for the information provided	in
Section 2 as provided in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and attaches a full description of the specific information	on
for which confidentiality is asserted and the basis for such assertion.	

(i)

Section 3 - Certifications Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal: 🗷 Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system: or ☐ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. If Operator checks this box, Operator will select one of the following: Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or Venting and Flaring Plan.

Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including: power generation on lease; (a) power generation for grid; (b) (c) compression on lease; (d) liquids removal on lease; reinjection for underground storage; (e) **(f)** reinjection for temporary storage; **(g)** reinjection for enhanced oil recovery; fuel cell production; and (h)

Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

other alternative beneficial uses approved by the division.

- (a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or
- (b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.
- 2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

Conditions of A	approval:

VI. Separation Equipment:

Mack Energy Corporation(MEC) production facilities include separation equipment designed to efficiently separate gas from liquid phases to optimize gas capture based on projected and estimated volumes from the targeted pool of our completion project. MEC will utilize flowback separation equipment and production separation equipment designed and built to industry specifications after the completion to optimize gas capture and send gas to sales or flare based on analytical composition. MEC operates facilities that are typically multi-well facilities. Production separation equipment is upgraded prior to new wells being completed, if determined to be undersized or inadequate. This equipment is already on-site and tied into our sales gas lines prior to the new drill operations.

VII. Operational Practices:

- Subsection (A) Venting and Flaring of Natural Gas. MEC understands the requirements of NMAC 19.15.27.8 which outlines that the venting and flaring of natural gas during drilling, completion or production operations that constitutes waste as defined in 19.15.2 are prohibited.
- 2. Subsection (B) Venting and Flaring during drilling operations. This gas capture plan isn't for a well being drilled.
- 3. Subsection (C) Venting and flaring during completion or recompletion. Flowlines will be routed for flowback fluids into a completion or storage tank and if feasible under well conditions, flare rather than vent and commence operation of a separator as soon as it is technically feasible for a separator to function.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
- 4. Subsection (D) Venting and flaring during production operations o At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
 - Monitor manual liquid unloading for wells on-site or in close proximity (<30 minutes' drive time), take reasonable actions to achieve a stabilized rate and pressure at the earliest practical time, and take reasonable actions to minimize venting to the maximum extent practicable.
 - MEC will not vent or flare except during the approved activities listed in NMAC 19.15.27.8 (D)
 14.
- 5. Subsection (E) Performance standards \circ All tanks and separation equipment are designed for maximum throughput and pressure to minimize waste.
 - If a flare is utilized during production operations it will have a continuous pilot and is located more than 100 feet from any known well or storage tanks.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.

- 6. Subsection (F) Measurement or estimation of vented and flared natural gas o Measurement equipment is installed to measure the volume of natural gas flared from process piping.
 - When measurement isn't practicable, estimation of vented and flared natural gas will be completed as noted in 19.15.27.8 (F) 5-6.

VIII. Best Management Practices:

- 1. MEC has adequate storage and takeaway capacity for wells it chooses to complete as the flowlines at the sites are already in place and tied into a gathering system.
- 2. MEC will flare rather than vent vessel blowdown gas when technically feasible during active and/or planned maintenance to equipment on-site.
- 3. MEC combusts natural gas that would otherwise be vented or flared, when technically feasible.
- 4. MEC will shut in wells in the event of a takeaway disruption, emergency situation, or other operations where venting or flaring may occur due to equipment failures.
- 5. MEC has a gas gathering system in place(CTB-887)a with multiple purchaser's to limit venting or flaring, due to purchaser shut downs.

RE:

Horizontal Well Proposals – Devils Tower State Com #1H & #2H

Proposed Spacing Unit: S2SE4 Sec. 36-T16S-R31E, S2S2 Sec. 31-T16S-R32E Eddy & Lea County, New Mexico

Dear Working Interest Owner:

Mack Energy Corporation, an affiliate of Chase Oil Corporation, proposes to drill and complete the permitted Devils Tower State Com #1H & #2H as horizontal Yeso wells to the approximate total vertical and measured depth at the following locations as shown below:

Devils Tower State Com #1H

- o Surface Hole Location 1010' FSL, 1890' FWL, Section 36-T16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,433'
- o MD: ~ 13,733'

Devils Tower State Com #2H

- o Surface Hole Location 990' FSL, 1890' FWL, Section 36-16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,952'
- o MD: ~ 14,182'

Mack Energy Corporation will also propose a new and superseding Operating Agreement, being a modified 1989 AAPL form with horizontal modifications, covering the S2SE4 Section 36-T16S-R31E & S2S2 Section 31-T16S-R32E, limited to the Yeso formation. The Operating Agreement will contain the following provisions:

- o Effective Date: March 1, 2026
- o 100%/300%/300% non-consent penalties
- o \$8,000/\$800 drilling/producing monthly overhead rate (COPAS)
- Mack Energy Corporation as named Operator

Please provide your election on the following page within thirty (30) days. If you elect to participate, please also return a <u>signed AFE</u> to the undersigned's attention at the letterhead address, via email to <u>deriks@mec.com</u> or by facsimile to 575-748-7374.

If you do not wish to make an election in this well, but would like to divest of your interest, please mark the appropriate election on the attached election page and return to my attention in the same manner as above.

Should you have questions of a technical nature, please contact Cole Ponce by email at ColePonce@mec.com or by calling (575) 748-1288. I can also be reached at the same number.

Sincerely,

Mack Energy Corporation

Derik Smith Landman

RE: Horizontal Well Proposals – Devils Tower State Com #1H & #2H

Proposed Spacing Unit: S2SE4 Sec. 36-T16S-R31E, S2S2 Sec. 31-T16S-R32E

Eddy & Lea County, New Mexico

Dear Working Interest Owner:

Mack Energy Corporation, an affiliate of Chase Oil Corporation, proposes to drill and complete the permitted Devils Tower State Com #1H & #2H as horizontal Yeso wells to the approximate total vertical and measured depth at the following locations as shown below:

Devils Tower State Com #1H

- o Surface Hole Location 1010' FSL, 1890' FWL, Section 36-T16S-R31E
- Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5.433'
- o MD: ~ 13,733'

Devils Tower State Com #2H

- o Surface Hole Location 990' FSL, 1890' FWL, Section 36-16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,952'
- o MD: ~ 14,182'

Mack Energy Corporation will also propose a new and superseding Operating Agreement, being a modified 1989 AAPL form with horizontal modifications, covering the S2SE4 Section 36-T16S-R31E & S2S2 Section 31-T16S-R32E, limited to the Yeso formation. The Operating Agreement will contain the following provisions:

- o Effective Date: March 1, 2026
- o 100%/300%/300% non-consent penalties
- \$8,000/\$800 drilling/producing monthly overhead rate (COPAS)
- Mack Energy Corporation as named Operator

Please provide your election on the following page within thirty (30) days. If you elect to participate, please also return a <u>signed AFE</u> to the undersigned's attention at the letterhead address, via email to <u>deriks@mec.com</u> or by facsimile to 575-748-7374.

If you do not wish to make an election in this well, but would like to divest of your interest, please mark the appropriate election on the attached election page and return to my attention in the same manner as above.

Should you have questions of a technical nature, please contact Cole Ponce by email at ColePonce@mec.com or by calling (575) 748-1288. I can also be reached at the same number.

Sincerely,

Mack Energy Corporation

Derik Smith Landman

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

APPLICATION OF CHASE OIL CORPORATION FOR COMPULSORY POOLING, EDDY AND LEA COUNTIES, NEW MEXICO.

CASE	NO	
CASE	IIV.	

APPLICATION

Chase Oil Corporation ("Chase" or "Applicant") (OGRID No. 53773), through its undersigned attorneys, hereby files this application with the Oil Conservation Division pursuant to the provisions of NMSA 1978, § 70-2-17, for an order pooling all uncommitted interest owners in the Yeso formation underlying a standard 240.65-acre, more or less, horizontal well spacing unit comprised of the S/2 SE/4 of Section 36, Township 16 South, Range 31 East, NMPM, Eddy County, New Mexico, and Lot 4, SE/4 SW/4, and S/2 SE/4 (S/2 S/2 equivalent) of irregular Section 31, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico. In support of its application, Chase states:

- 1. Applicant is a working interest owner in the proposed horizontal spacing unit and has the right to drill thereon.
- 2. Applicant seeks to designate Mack Energy Corporation as the operator of the proposed horizontal spacing unit.
- 3. Applicant seeks to initially dedicate the above-referenced horizontal spacing unit to the proposed **Devils Tower State Com 1H** and **Devils Tower State Com 2H** wells, both to be horizontally drilled from surface locations in the SE/4 SW/4 (Unit N) of Section 36, T16S-R31E, with first take points in the SW/4 SE/4 (Unit O) of Section 36, T16S-R31E, and last take points in the SE/4 SE/4 (Unit P) of irregular Section 31, T16S-R32E.

- 4. Applicant has sought and been unable to obtain voluntary agreement for the development of these lands from all interest owners in the subject spacing unit.
- 5. The pooling of uncommitted interest owners will allow Applicant to obtain a just and fair share of the oil and gas underlying the subject lands, avoid the drilling of unnecessary wells, will prevent waste, and will protect correlative rights.

WHEREFORE, Applicant requests that this application be set for hearing before an Examiner of the Oil Conservation Division on November 13, 2025, and, after notice and hearing as required by law, the Division enter an order:

- A. Pooling all uncommitted interest owners in the horizontal spacing unit;
- B. Designating Mack Energy Corporation as operator of this spacing unit and the horizontal wells to be drilled thereon;
- C. Authorizing Applicant to recover its costs of drilling, completing, and equipping the wells;
- D. Approving the actual operating charges and costs of supervision while drilling and after completion, together with a provision adjusting the rates pursuant to the COPAS accounting procedures; and
- E. Imposing a 200% charge for the risk assumed by Applicant in drilling and completing the wells against any working interest owner who does not voluntarily participate in the drilling of the wells.

Respectfully submitted,

HOLLAND & HART LLP

ATTORNEYS FOR CHASE OIL COMPANY & MACK ENERGY CORPORATION

CASE :

Application of Chase Oil Corporation for Compulsory Pooling, Eddy and Lea Counties, New Mexico. Applicant in the above-styled cause seeks an order pooling all uncommitted interest owners in the Yeso formation underlying a standard 240.65-acre, more or less, horizontal well spacing unit comprised of the S/2 SE/4 of Section 36, Township 16 South, Range 31 East, NMPM, Eddy County, New Mexico, and Lot 4, SE/4 SW/4, and S/2 SE/4 (S/2 S/2 equivalent) of irregular Section 31, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico. Said unit will be initially dedicated to the proposed Devils Tower State Com 1H and Devils Tower State Com 2H wells, both to be horizontally drilled from surface locations in the SE/4 SW/4 (Unit N) of Section 36, T16S-R31E, with first take points in the SW/4 SE/4 (Unit O) of Section 36, T16S-R31E, and last take points in the SE/4 SE/4 (Unit P) of irregular Section 31, T16S-R32E. Also, to be considered will be the cost of drilling and completing the wells and the allocation of the cost thereof, actual operating costs and charges for supervision, designation of Mack Energy Corporation as operator of the wells, and a 200% charge for risk involved in drilling said wells. Said area is located approximately 3 miles northwest of Maljamar, New Mexico.
