Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

Method	Batch	Dilution	Preparation date/time	Analysis date/time	Analyst	Location
Volatile Organic Compounds (GC/MS) by Method 8260B	WG1560666	1	10/17/20 15:12	10/17/20 15:12	DWR	Mt. Juliet, TN
Volatile Organic Compounds (GC/MS) by Method 8260B	WG1561731	5	10/20/20 05:28	10/20/20 05:28	ACG	Mt. Juliet, TN

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Chris McCord
Project Manager

Report Revision History

Level II Report - Version 1: 10/22/20 17:41

Project Narrative

01/27/21: Revised report to update COC from NCF to OK. A missing sample was received in a delayed cooler the next day in good order. An incorrect qualifier was also removed from the Method Blank in WG1556439.

Sample Delivery Group (SDG) Narrative

Analyzed from headspace vial.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Chris McCord
Project Manager

Report Revision History

Level II Report - Version 1: 10/22/20 20:56

Sample Delivery Group (SDG) Narrative

pH outside of method requirement.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Chris McCord
Project Manager

Report Revision History

Level II Report - Version 1: 10/22/20 18:12
Level II Report - Version 2: 11/12/20 20:53
Level II Report - Version 3: 12/31/20 11:40

Project Narrative

Revised report to correct the Benzene result initially reported on samples RA-4798(-54) and RA-4196(-55). An out of hold reanalysis is now reporting due to carry-over contamination detected for Benzene in the first analysis. A re-sample of these two samples reported under L1283074 also confirms the Non-detect results for Benzene.

Sample Delivery Group (SDG) Narrative

pH outside of method requirement.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
Q	Sample was prepared and/or analyzed past holding time as defined in the method. Concentrations should be considered minimum values.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

Login #: L1271301	Client: TRCATX	Date: 10/08/20	Evaluated by: Myra "Katie" Ingram

Non-Conformance (check applicable items)

	Sample Integrity		Chain of Custody Clarification		
	Parameter(s) past holding time	x	Login Clarification Needed		**If Broken Container:**
	Temperature not in range		Chain of custody is incomplete		Insufficient packing material around container
	Improper container type		Please specify Metals requested.		Insufficient packing material inside cooler
	pH not in range.		Please specify TCLP requested.		Improper handling by carrier (FedEx / UPS / Couri
	Insufficient sample volume.		Received additional samples not listed on coc.		Sample was frozen
	Sample is biphasic.		Sample ids on containers do not match ids on coc		Container lid not intact
	Vials received with headspace.		Trip Blank not received.		**If no Chain of Custody:**
	Broken container		Client did not "X" analysis.		Received by:
	Broken container:		Chain of Custody is missing		Date/Time:
	Sufficient sample remains				Temp./Cont. Rec./pH:
					Carrier:
					Tracking#

Login Comments: Did not receive a metals container for RA-4798 and RA-4196.

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
---	No applicable CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
DRO	Diesel Range Organics
DRO-EP	Diesel Range Organics data from wells located in the Evaporation Ponds area
Dup	Duplicate sample
FD	Field duplicate sample
GRO	Gasoline Range Organics
mg/L	Milligrams per Liter
TPH	Total Petroleum Hydrocarbons
NMED TPH	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table 6-4 TPH Groundwater Screening Leve

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
Q	Sample was prepared and/or analyzed past recommended holding time.
V3	Internal standard exhibited poor recovery due to sample matrix interference; analytical result biased high.

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1, Tap Water Screening Level
WQCC Dom	NMED Groundwater standard for domestic exposure, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC
WQCC Irr	NMED Groundwater standard for irrigation exposure, 20.6.2.3103.C NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1, Tap Water Screening Level
WQCC Dom	NMED Groundwater standard for domestic exposure taken from 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC
WQCC Irr	NMED Groundwater standard for irrigation exposure, 20.6.2.3103.C NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

				Analyte Group:	Volatile Organic Compounds										
				Analyte:	1,1,1,2-Tetra-chloroethane	1,1,1-Tri-chloroethane	1,1,2,2-Tetra-chloroethane	1,1,2-Tri-chloroethane	1,1-Di-chloroethane	1,1-Di-chloroethene	1,2,4-Trimethyl-benzene	1,2-Dibromo-ethane (Ethylene dibromide)	1,2-Di-chloroethane	1,3,5-Trimethyl-benzene	2-Butanone (MEK)
				Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

				Analyte Group:	Volatile Organic Compounds										
				Analyte:	1,1,1,2-Tetra-chloroethane	1,1,1-Tri-chloroethane	1,1,2,2-Tetra-chloroethane	1,1,2-Tri-chloroethane	1,1-Di-chloroethane	1,1-Di-chloroethene	1,2,4-Trimethyl-benzene	1,2-Dibromo-ethane (Ethylene dibromide)	1,2-Di-chloroethane	1,3,5-Trimethyl-benzene	2-Butanone (MEK)
				Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

Analyte Group:				Volatile Organic Compounds											
			Analyte:	1,1,1,2-Tetra-chloroethane	1,1,1-Tri-chloroethane	1,1,2,2-Tetra-chloroethane	1,1,2-Tri-chloroethane	1,1-Di-chloroethane	1,1-Di-chloroethene	1,2,4-Trimethyl-benzene	1,2-Dibromo-ethane (Ethylene dibromide)	1,2-Di-chloroethane	1,3,5-Trimethyl-benzene	2-Butanone (MEK)
			Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

Analyte Group:				Volatile Organic Compounds												
			Analyte:	2-Hexanone (Methyl N-Butyl Ketone)	4-Isopropyl-toluene (p-Cymene)	4-Methyl-2-pentanone	Acetone	Benzene	Bromo-dichloro-methane	Bromoform (Tribromo-methane)	Bromo-methane	Carbon disulfide	Carbon tetrachloride	Chlorobenzene	Chloroethane
			Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L
			CGWSL:	---	---	1.24	14.1	0.00500	0.0800	---	0.00754	0.810	0.00500	0.100	20.9
			CGWSL Source:	---	---	NMED TW	TMED TW	WQCC HH	USEPA MCL	---	NMED TW	NMED TW	WQCC HH	USEPA MCL	NMED TW

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

				Analyte Group:	Volatile Organic Compounds										
				Analyte:	Chloroform	Chloro-methane	cis-1,2-Dichloro-ethene	cis-1,3-Dichloro-propene	Dibromo-chloromethane	Ethyl-benzene	Isopropyl-benzene (Cumene)	m,p-Xylene	Methyl tert-butyl ether (MTBE)	Methylene chloride	Naphthalene
				Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L
				CGWSL:	0.0800	0.0203	0.0700	0.00471	0.0800	0.700	0.447	---	0.100	0.00500	0.0300
				CGWSL Source:	USEPA MCL	NMED TW	WQCC HH	USEPA TW	USEPA MCL	WQCC HH	WQCC TW	---	WQCC Dom	WQCC HH	WQCC HH

Appendix C, Table C.4 - Summary of Groundwater Analytical Data - Volatile Organic Compounds

2020 Annual Groundwater Monitoring Report

HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

				Analyte Group:	Volatile Organic Compounds											
				Analyte:	n-Butyl-benzene	N-Propyl-benzene	o-Xylene	sec-Butyl-benzene (2-Phenyl-butane)	Styrene	Tetra-chloroethene	Toluene	Total Xylenes	trans-1,2-Dichloroethene	trans-1,3-Di-chloropropene	Tri-chloroethene	Vinyl Chloride
				Units:	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L	mg/L
				CGWSL:	1.00	0.660	0.193	2.00	0.100	0.00500	1.00	0.620	0.100	0.00471	0.00500	0.00200
				CGWSL Source:	WQCC TW	WQCC TW	WQCC TW	USEPA TW	WQCC HH	WQCC HH	WQCC HH	WQCC HH	WQCC HH	USEPA TW	WQCC HH	WQCC HH

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.
---	No applicable CGWSL.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1, Tap Water Screening Level
USEPA TW	United States Environmental Protection Agency Tap Water Screening Level, "Regional Screening Levels (RSL) Summary Table", November 2020
USEPA MCL	United States Environmental Protection Agency Maximum Contaminant Level, "Regional Screening Levels (RSL) Summary Table", November 2020
WQCC Dom	NMED Groundwater standard for domestic exposure, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC

Lab Footnote	
B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
Q	Sample was prepared and/or analyzed past recommended holding time.
V3	Internal standard exhibited poor recovery due to sample matrix interference; analytical result biased high.

Released to Imaging: 11/21/2023 10:16:55 AM

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.
---	No applicable CGWSL.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
WQCC Dom	NMED Groundwater standard for domestic exposure, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
P1	Relative percent difference value not applicable for sample concentrations less than 5 times the reporting limit.
Q	Sample was prepared and/or analyzed past recommended holding time.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.
---	No applicable CGWSL.
ND	CGWSL not determined for SVOCs that were not detected above detection limit during any sampling event

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1 Tap Water Screening Level
USEPA MCL	United States Environmental Protection Agency Maximum Contaminant Level from "Regional Screening Level (RSL) Summary Table", November 2020
USEPA TW	United States Environmental Protection Agency Tap Water Screening Level, "Regional Screening Levels (RSL) Summary Table", November 2020
WQCC Dom	NMED Groundwater standard for domestic water supply, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J4	The associated batch QC was outside the established quality control range for accuracy.

Appendix E

Appendix D: Data Validation

Data reported by Pace Analytical in Mount Juliet, Tennessee, for the groundwater samples collected in June 2020, and October and November 2020 were reviewed to ensure that reported analytical results met the data quality requirements contained in the United States Environmental Protection Agency (USEPA) *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA, January 2017), *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA, January 2017), and the individual methods, as applicable. Quality control (QC) data indicate that measurement data are sufficient to meet method quality objectives, reported data are defensible, and QC mechanisms were generally effective in ensuring measurement data reliability within the expected limits of sampling and analytical error.

The following significant issue was identified. Due to a significant holding time exceedance (>2x the holding time), the nondetect results for benzene in samples RA-4798 and RA-4196 collected on 10/6/20 are not useable for project objectives. Due to this issue, these samples were re-collected on 11/6/20. The results for benzene in samples RA-4798 and RA-4196 collected on 11/6/20 should be used for project objectives.

The following sections discuss the QC issues identified during the data review for each of the data reports listed below.

June 2020 Data Packages	October 2020 Data Packages
L1230655	L1271283
L1230678	L1271284
L1230681	L1271297
L1230685	L1271298
L1231128	L1271301
L1231153	L1283074*
L1231155	
L1231207	*November 2020

Analytes that were detected in the both the associated blank and sample were evaluated as follows: Corresponding samples at concentrations within five times the maximum blank concentration for inorganic analytes and within 10 times the maximum blank concentrations for organic analytes may include measurement contributions from the laboratory (for method blanks) and/or field (for equipment and trip blanks).

The following criteria were used in evaluation of the field duplicates: When both results are ≥ five times the reporting limit (RL), relative percent differences (RPDs) must be <30%. When one or both results are < five times the RL, the absolute difference must be < the RL.

The following criteria were used in evaluation of laboratory duplicates: When both results are ≥ five times the RL, RPDs must be <20%.

Lab Report L1230655

Sample identifiers cross-referenced to laboratory identifications are presented below.

Sample ID	Lab ID
L1230655-01	MW-56
L1230655-02	MW-55
L1230655-03	MW-54A
L1230655-04	NCL-49
L1230655-05	DUP-NCL-01*
L1230655-06	TRIP BLANK-NCL-01

*Field duplicate of NCL-49

Data Review Checklist	Yes	No	Not applicable
Did all samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X		
All samples within holding times?	X		
Any detection in method blanks?		X	
Any detection in equipment blanks?			X
Any detection in trip blanks?		X	
Any LCS or LCS duplicates (LCSD) percent recoveries (%R) out of laboratory defined limits?		X	
Any LCS/LCSD RPD above laboratory defined limits?		X	
Any matrix spike (MS) or MS duplicate (MSD) %R outside of laboratory defined limits?		X	
Any MS/MSD RPD above laboratory defined limits?			X
Any surrogate %R outside of laboratory defined limits?		X	
Any laboratory duplicate RPD above laboratory defined limits?		X	
Any field duplicate data additionally flagged as estimated?	X		
Any analyte analyzed by a nonequivalent method than planned?		X	

Other

RLs for dissolved solids were 2.5-5 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentrations of dissolved solids. There is no impact on data usability since dissolved solids results were detected above the RLs in the affected samples.

Select samples were analyzed at dilutions for nitrate-nitrite, chloride, sulfate, and/or select VOCs but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted due to the presence of these target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability since these analytes were detected above the RLs in the diluted samples.

MS/MSDs

An MS analysis was performed on sample MW-55 for nitrate-nitrite. All criteria were met.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-54A: Nitrate-nitrite
- MW-55: Cyanide

All criteria were met.

Field Duplicates

The variability for total manganese in field duplicate pair, NCL-49/DUP-NCL-01, did not meet the acceptance limits as the absolute difference was greater than the RL. Therefore, the positive results for total manganese in samples NCL-49 and DUP-NCL-01 may be considered estimated.

Released to Imaging: 11/21/2023 10:16:55 AM

Lab Report L1230678

Sample identifiers cross-referenced to laboratory identifications are presented below.

Lab ID	Sample ID
L1230678-01	TEL-4
L1230678-02	TEL-2
L1230678-03	TEL-1
L1230678-04	MW-49
L1230678-05	DUP-TEL-01*
L1230678-06	EB-TEL-01
L1230678-07	TRIP BLANK-TEL-01

*Field duplicate of TEL-4

Items	Yes	No	Not applicable
Did all samples meet the laboratory's standard conditions of sample acceptability upon receipt?		X	
All samples within holding times?	X		
Any detection in method blanks?		X	
Any detection in equipment blanks?	X		
Any detection in trip blanks?		X

Any analyte analyzed by a nonequivalent method than planned?		X	

Other

RLs for dissolved solids in all samples except the equipment blank were five times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentrations of dissolved solids. There is no impact on data usability since dissolved solids results were detected above the RLs in the affected samples.

The laboratory noted that the cyanide analysis of sample MW-49 was diluted 50-fold due to sulfide interference. Therefore, the RL for cyanide in this sample was elevated accordingly.

The laboratory noted that the VOC analysis of sample TEL-4 was diluted 5-fold due to foaming at the time of analysis. Therefore, the RLs for VOCs in this sample were elevated accordingly.

The laboratory noted that the TPH (GC/FID) low fraction analyses of samples TEL-1 and DUP-TEL-01 were diluted 10-fold due to foaming at the time of analysis. Therefore, the RLs for TPH (GC/FID) low fraction in these samples were elevated accordingly.

Several samples were analyzed at dilutions for nitrate-nitrite, chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, and/or VOCs but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, and select VOCs since these analytes were detected above the RLs in the diluted samples. The RLs for nitrate-nitrite and/or select VOCs in several samples were elevated accordingly.

Standard Conditions

The laboratory noted that sample TEL-1 did not have a collection date or time listed on the chain-of-custody. The laboratory logged this sample in according to the date and time on the sample containers.

Equipment Blanks

The following analytes were detected in the equipment blank sample, EB-TEL-01: TPH (GC/FID) high fraction, acetone, benzene, 2-butanone, and trichloroethene. The analyte listed below was detected in the corresponding samples at concentrations within 10 times the equipment blank concentrations for organic analytes. Therefore, these samples may include measurement contributions from the field.

- TPH (GC/FID) high fraction: TEL-2, TEL-1

MS/MSDs

MS/MSD analyses were performed on the following samples:

- DUP-TEL-01: Dissolved metals
- TEL-4: Total metals, TPH (GC/FID) low fraction

The %R of dissolved manganese in the MS performed on sample DUP-TEL-01 was outside of the laboratory-defined recovery limits (75-125%). However, the concentration of this analyte in the unspiked sample was greater than four times the spiked concentration; thus, the %R of dissolved manganese was not used to evaluate potential matrix effects.

The %Rs of total calcium in the MS/MSD, total manganese in the MSD, and total sodium in the MS performed on sample TEL-4 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the %Rs of total calcium, manganese, and sodium were not used to evaluate potential matrix effects.

The %Rs of total nickel in the MS and MSD performed on sample TEL-4 were outside of the laboratory-defined recovery limits (75-125%); although nickel was not reported in the parent sample, these results indicate a potential low bias for nickel in the other project samples from the

same batch, where reported. Therefore, the positive result for total nickel in sample MW-49 may be biased low.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- DUP-TEL-01: dissolved solids, Nitrate-Nitrite
- EB-TEL-01: Chloride, fluoride, sulfate

All criteria were met.

Field Duplicates

Samples TEL-4/ DUP-TEL-01 were submitted as the field duplicate pair. The variability for TPH (GC/FID) low fraction did not meet the acceptance limits as the absolute difference was greater than the RL. Therefore, the positive results for TPH (GC/FID) low fraction in samples TEL-4 and DUP-TEL-01 may be considered estimated.

Lab Report L1230681

Other

RLs for dissolved solids in all samples except the equipment blanks were 5-20 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentrations of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the VOC analyses of samples MW-6A and MW-120 were diluted 5-fold due to foaming at the time of analysis. Therefore, the RLs for VOCs in these samples were elevated accordingly.

Several samples were analyzed at dilutions for nitrate-nitrite, select total metals, chloride, fluoride, sulfate, and/or TPH (GC/FID) high fraction but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for nitrate/nitrite, chloride, fluoride, sulfate, TPH (GC/FID) high fraction, and select metals since these analytes were detected above the RLs in the diluted samples. The RLs for select metals in several samples were elevated accordingly.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since the samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Equipment Blanks

The following analytes were detected in the equipment blank samples, EB-EP-01, EB-EP-02, and/or EB-EP-03: total sodium, chloroform, and TPH (GC/FID) low fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum equipment blank concentration for inorganic analytes and within 10 times the equipment blank concentrations for organic analytes. Therefore, these samples may include measurement contributions from the field.

- TPH (GC/FID) low fraction: MW-4A, MW-6A, MW-7A, MW-72, MW-73, MW-88, MW-120, OCD-6, OCD-8A, DUP-EP-01

MS/MSD

MS and/or MS/MSD analyses were performed on the following samples:

- OCD-7AR, MW-87: Nitrate-nitrite
- MW-120, EB-EP-02, EB-EP-03: Chloride, fluoride, sulfate
- EB-EP-01: Dissolved metals
- MW-18A: Total metals

The %Rs of chloride and sulfate in the MS and MSD performed on sample MW-120 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of these

analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the %Rs of chloride and sulfate were not used to evaluate potential matrix effects.

The %Rs of total calcium, manganese, and sodium in the MS and MSD performed on sample MW-18A were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentration; thus, the %Rs of total calcium, manganese, and sodium were not used to evaluate potential matrix effects.

The %Rs of total barium (129%/130%), and total uranium (143%/145%) in the MS/MSD performed on sample MW-18A were above the laboratory-defined recovery limits (75-125%); therefore, the positive results for total barium in all samples may be biased high. There is no impact on data usability for total uranium due to this issue since all total uranium results were nondetect.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-6A, MW-18A, MW-70: Dissolved solids
- DUP-EP-01: Nitrate-nitrite
- MW-6A, EB-EP-01: Chloride, fluoride, sulfate

The RPD (26.4%) for dissolved solids in the duplicate analysis performed on sample MW-70 exceeded the acceptance criteria used in this evaluation (20%); Therefore, the positive result for dissolved solids in sample MW-70 may be considered estimated.

Field Duplicates

Samples MW-7A and DUP-EP-01 were submitted as the field duplicate pair. All criteria were met.

Other

RLs for dissolved solids in all samples except the equipment blanks were 2-20 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the nitrate-nitrite analyses of the following samples were diluted due to sulfide interference. Therefore, the RLs for nitrate-nitrite in these samples were elevated accordingly.

- MW-40, MW-103, and DUP-REST-02 (10-fold);
- MW-104 (5-fold);
- MW-64 (2-fold)
- MW-98 (100-fold);
- RW-9, MW-90, and MW-96 (50-fold); and

- MW-91, MW-106 (200-fold).

Several samples were analyzed at dilutions for nitrate-nitrite, sodium, chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, SVOCs, and/or VOCs but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for nitrate/nitrite, chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, select VOCs, select SVOCs, and sodium since these analytes were detected above the RLs in the diluted samples. The RLs for select VOCs and/or SVOCs in several samples were elevated accordingly.

The laboratory indicated that a constant weight could not be achieved due to matrix interference in the dissolved solids analyses of samples RW-#18A and MW-116. Therefore, the positive results for dissolved solids in these samples may be considered estimated.

The laboratory reported SVOCs for sample MW-95; this analysis was not requested on the chain-of-custody.

Standard Conditions

The laboratory noted that samples KWB-7, KWB-11A, and KWB-11B did not have a collection date or time listed on the chain-of-custody. The laboratory logged these samples in according to the dates and times on the sample containers.

Samples MW-116, RW-#18A, and TRIP BLANK-REST-03 were misplaced during shipment to the laboratory and were not received by the laboratory. These samples were re-collected but the new sampling dates and times were not recorded by the field sampler. The original collection dates and times listed on the chain-of-custody were logged in by the laboratory.

Holding Times

All samples submitted for dissolved solids analysis with the exception of sample MW-50 were prepared slightly outside of the 7-day holding time. However, since all samples except MW-50 were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability. Sample MW-50 was prepared four days outside of the 7-day holding time for dissolved solids. Therefore, the result for dissolved solids in sample MW-50 may be considered estimated.

Laboratory Method Blanks

The following analytes were detected in the method blanks: total arsenic, total nickel, naphthalene (SVOC), and TPH (GC/FID) low fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the method blank concentration for inorganic analytes and within 10 times the method blank concentration for organic analytes. Therefore, these samples may include measurement contributions from the laboratory.

- Total arsenic: MW-90, MW-95, MW-96, DUP-REST-02, and DUP-REST-05
- Total nickel: EB-REST-05

- TPH (GC/FID) low fraction: MW-29, MW-41, MW-95, MW-106, DUP-REST-05, and EB-REST-02
- Naphthalene (SVOC): MW-95

Dissolved solids was detected at an unusually high concentration in the method blank in QC batch WG1496357 associated with samples UG-1, UG-2, and UG-4. After communication with the laboratory during this review, the laboratory indicated that most likely due to laboratory error, the method blank was inadvertently spiked as if it were an LCS. The laboratory re-prepared these samples out of the 7-day holding time which resulted in lower but comparable results. The results that were prepared within holding time for dissolved solids were reported with a sample narrative indicating the confirmatory results from the re-preparation. There is likely no adverse impact on data usability due to this method blank issue.

Equipment Blanks

The following analytes were detected in the equipment blank samples, EB-REST-02 and/or EB-REST-05: dissolved solids, total nickel, chloroform, and TPH (GC/FID) low fraction. Note that the results for total nickel and TPH (GC/FID) low fraction in the equipment blanks were less than five times the concentration detected in the associated method blank for total nickel and less than 10 times the concentration in the associated method blank for TPH (GC/FID) low fraction; therefore, the results for total nickel and TPH (GC/FID) low fraction in the equipment blanks were likely the result of laboratory method blank contamination and did not affect any associated field samples. Results for dissolved solids and chloroform were either nondetect or detected at a concentration greater than five times the equipment blank concentration; therefore, therefore, there is no impact on data usability.

Trip Blanks

4-Methyl-2-pentanone was detected in the trip blank TRIP BLANK-REST-03. However, 4-methyl-2-pentanone was not detected in the associated samples so there is no impact on data usability due to this detection.

LCS/LCSD

The LCS %R for chlorobenzene (79.8%) was below the laboratory-defined limits (80-121%), in QC batch WG1496569. Therefore, the nondetect results for chlorobenzene in the samples from this QC batch, MW-39, MW-57, MW-64, MW-98, MW-101, MW-103, MW-104, MW-125, MW-126A, MW-126B, UG-1, UG-2, UG-3R, UG-4, KWB-12A, KWB-12B, KWB-13, and RW-10, are potentially biased low.

The LCS %Rs for cis-1,3-dichloropropene (127%) and trichloroethene (136%) were above the laboratory-defined limits (80-123% and 78-124%, respectively), in QC batch WG1496569. However since these compounds were not detected in the samples from this this QC batch, MW-39, MW-57, MW-64, MW-98, MW-101, MW-103, MW-104, MW-125, MW-126A, MW-126B, UG-1, UG-2, UG-3R, UG-4, KWB-12A, KWB-12B, KWB-13, and RW-10, there is no impact on data usability.

The LCS/LCSD %Rs for chlorobenzene (124%/127%), and LCSD %Rs for tetrachloroethene (133%), 1,1,2-trichloroethane (121%), and trichloroethene (129%) were above the laboratory-defined limits (80-121%, 72-132%, 80-120%, and 78-124%, respectively), in QC batch WG1498555. However, since these compounds were not detected in the sample from this this QC batch, DUP-REST-02, there is no impact on data usability.

The LCS %R benzaldehyde (208%) was above the laboratory-defined limits (10-160%), in QC batch WG1496709. However since this compound was not detected in the sample from this this QC batch, MW-95, there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-101, MW-114, MW-125, MW-139: Nitrate-Nitrite
- KWB-11A, UG-2: Cyanide
- MW-64, MW-95, MW-131, UG-2: Chloride, fluoride, sulfate
- UG-3R: Dissolved boron
- MW-64, MW-116: Dissolved metals
- KWB-12B: Total metals
- MW-103: TPH (GC/FID) low fraction

The %Rs of chloride in the MS/MSD performed on sample MW-131, and in the MS performed on samples MW-64 and MW-95 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of this analyte in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of chloride were not used to evaluate potential matrix effects.

The %Rs of sulfate in the MS/MSD performed on sample UG-2 and in the MS performed on sample MW-95 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of this analyte in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of sulfate were not used to evaluate potential matrix effects.

The %Rs of dissolved barium in the MS/MSD performed on sample MW-64 were outside of the laboratory-defined recovery limits (75-125%). However, the concentration of this analyte in the unspiked sample was greater than four times the spiked concentration; thus, the recoveries of dissolved barium were not used to evaluate potential matrix effects.

The %R of dissolved selenium in the MS performed on sample MW-64 (127%) was above the laboratory-defined recovery limits (75-125%); therefore, the positive results for dissolved selenium in samples MW-29, MW-50, MW-57, MW-95, MW-96, MW-114, MW-115, MW-117, MW-116, MW-118, MW-119, MW-125, MW-126B, UG-1, UG-2, UG-3R, UG-4, RW-#16B, RW-#18A, KWB-11A, KWB-11B, KWB-12A, KWB-12B, KWB-13, DUP-REST-02, and DUP-REST-05 may be biased high.

The %Rs of nitrate-nitrite in the MS/MSD performed on sample MW-114 (112%/113%) and the MS performed on sample MW-125 (112%) were above the laboratory-defined recovery limits (90-110%); therefore, the positive results for nitrate-nitrite in samples MW-57, MW-114,

MW-115, MW-117, MW-118, MW-119, MW-125 MW-126B, KWB-11A, KWB-11B, KWB-12A, KWB-12B, and KWB-13 may be biased high.

The %Rs of total calcium in the MS/MSD performed on sample KWB-12B were outside of the laboratory-defined recovery limits (75-125%). However, the concentration of this analyte in the unspiked sample was greater than four times the spiked concentration; thus, the recoveries of total calcium were not used to evaluate potential matrix effects.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-98, MW-126B, KWB-7, RW-10, RW-#18A, DUP-REST-05: Dissolved solids
- MW-29, MW-57, KWB-7, UG-3R: Nitrate-Nitrite
- UG-1: Cyanide
- MW-39, MW-96, MW-104, KWB-7: Chloride, fluoride, sulfate

All criteria were met.

Field Duplicates

Samples MW-104/DUP-REST-02 and KWB-12B/DUP-REST-05 were submitted as the field duplicate pairs. All criteria were met in sample MW-104/DUP-REST-02.

The variability for total nickel in field duplicate pair KWB-12B and DUP-REST-05 did not meet the acceptance limits as the absolute difference was greater than the RL (total nickel was not detected in sample KWB-12B and was detected greater than five times the RL in the field duplicate sample). In addition, the RPD for nitrate-nitrite (32.7%) was above the acceptance criteria (30%) in field duplicate pair KWB-12B/DUP-REST-05. Therefore, the positive and nondetect results for total nickel and nitrate-nitrite in samples KWB-12B and DUP-REST-05 may be considered estimated.

Other

RLs for dissolved solids in all samples except the equipment blanks were 1.33-20 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the nitrate-nitrite analyses of the following samples were diluted due to sulfide interference. Therefore, the RLs for nitrate-nitrite in these samples were elevated accordingly.

- MW-42, MW-62, MW-93, and RW-7 (50-fold);
- MW-43 (5-fold); and
- MW-23 and DUP-REST-04 (10-fold).

The laboratory noted that the cyanide analyses of samples MW-28, MW-43, MW-60, and DUP-REST-04 were diluted 20-fold due to sulfide interference. Therefore, the RLs for cyanide in these samples were elevated accordingly.

The laboratory noted that the TPH (GC/FID) low fraction analyses of samples MW-42 and RW-7 were diluted 20-fold and 5-fold, respectively, due to foaming at the time of analysis. There is no impact on data usability since TPH (GC/FID) low fraction was detected above the RLs in the diluted samples.

The laboratory noted that the VOC analysis of sample MW-113 was diluted 5-fold due elevated concentrations of non-target analytes and/or matrix interference. Therefore, the RLs for VOCs in this sample were elevated accordingly.

The laboratory noted that the VOC analysis of sample MW-42 was diluted 5-fold due to due to foaming at the time of analysis. Therefore, the RLs for VOCs in this sample were elevated accordingly.

The laboratory noted that the SVOC analysis of sample MW-93 was diluted 5-fold due to matrix interference. Therefore, the RLs for SVOCs in this sample were elevated accordingly.

Several samples were analyzed at dilutions for nitrate-nitrite, chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, and/or VOCs but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for chloride, fluoride, sulfate, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, and select VOCs since these analytes were detected above the RLs in the diluted samples. The RLs for nitrate-nitrite and select VOCs in several samples were elevated accordingly.

Standard Conditions

The laboratory noted that the TPH (GC/FID) low fraction analyses of samples MW-113, MW-109, and MW-23 were performed using a vial with a pH outside of the method requirement ($\leq$2). This pH issue shortens the holding time to seven days and these samples were analyzed for TPH (GC/FID) low fraction after seven days of collection. Therefore, the positive results for TPH (GC/FID) low fraction in samples MW-113, MW-109, and MW-23 may be biased low.

A discrepancy was noted with select laboratory sample IDs that were handwritten on the chain-of-custody versus the actual laboratory sample IDs that were logged in by the laboratory for samples DUP-REST-03, DUP-REST-04, EB-REST-01, EB-REST-03, EB-REST-04, and TRIP BLANK-REST-01. The samples were analyzed for the requested analyses so there is no impact on data usability due to this issue.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: TPH (GC/FID) low fraction, carbon disulfide. The analytes listed below were detected in the corresponding samples at concentrations within 10 times the method blank concentration. Therefore, these samples may include measurement contributions from the laboratory.

- TPH (GC/FID) low fraction: MW-59, MW-61, MW-134, RW-7, EB-REST-04
- Carbon disulfide: MW-52, MW-109, MW-110, MW-111, MW-113, MW-130, MW-134, MW-135, MW-136, KWB-1A, RA-3156, RA-4196, RA-4798, RA-313, RW-4, RW-12R

Equipment Blanks

The following analytes were detected in the equipment blank samples, EB-REST-01, EB-REST-03, and/or EB-REST-04*: total manganese and TPH (GC/FID) low fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the equipment blank concentration for inorganic analytes and within 10 times the maximum equipment blank concentrations for organic analytes. Therefore, these samples may include measurement contributions from the field.

- Total manganese: MW-62, MW-134, DUP-REST-03
- TPH (GC/FID) low fraction: MW-42, MW-43, MW-59*, MW-61*, MW-134*, MW-135, MW-136, RW-7*, RW-#17A, DUP-REST-03, DUP-REST-04

*The results for TPH (GC/FID) low fraction in these samples were also less than 10 times the associated method blank concentration as noted above.

LCS/LCSDs

The LCS %R for n-butylbenzene (72.8%) was below the laboratory-defined limits (73-125%), in QC batch WG1497261. Therefore, the positive and nondetect results for n-butylbenzene in the samples from this QC batch, MW-23, MW-42, MW-59, MW-60, MW-61, MW-62, MW-66, MW-105, MW-93, RW-7, RW-#17A, DUP-REST-03, DUP-REST-04, EB-REST-01, EB-REST-03, EB-REST-04, and TRIP BLANK-REST-01, may be biased low.

The %Rs for chlorobenzene in the LCS (122%) and tetrachloroethene in the LCS/LCSD (133%/142%) were above the laboratory-defined limits (80-121% and 72-132%, respectively), in QC batch WG1499394. Therefore, the positive result for tetrachloroethene in sample DUP-REST-01 from this QC batch may be biased high.

The LCS %R for benzaldehyde (248%) was above the laboratory-defined limits (10-160%), in QC batch WG1496728. However, benzaldehyde was not detected in the sample from this QC batch so there is no impact on data usability.

MS/MSDs

MS and or MS/MSD analyses were performed on the following sample:

- MW-99, MW-134, RW-#17A: Nitrate-nitrite
- MW-110, RW-4, EB-REST-01: Chloride, fluoride, sulfate
- MW-28: Total mercury
- MW-60: Dissolved mercury
- MW-59: Dissolved metals
- MW-23, MW-134: Total metals

The %R (112%) of nitrate-nitrite in the MSD analysis performed on sample MW-134 was above the laboratory-defined recovery limits (90-110%); therefore, the positive results for nitrate-nitrite in samples MW-134, MW-130, MW-52, RA-4798, RA-313, MW-135, MW-136, KWB-1A, and MW-66 may be biased high.

The %Rs of total mercury in the MSD performed on sample MW-28 (72%) and dissolved mercury in the MS/MSD performed on sample MW-60 (68.3%/68.6%) were below the laboratory-defined recovery limits (75-125%); therefore, the nondetect results for total and dissolved mercury in samples MW-28, MW-43, MW-52, MW-60, MW-66, MW-136, KWB-1A, and DUP-REST-04 may be biased low.

The %Rs of chloride and/or sulfate in the MS and/or MSD performed on samples MW-110 and RW-4 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of chloride and sulfate were not used to evaluate potential matrix effects.

The %Rs of calcium and sodium in the MS and MSD performed on sample MW-134 and barium, calcium, and sodium in the MS and/or MSD performed on sample MW-23 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of barium, calcium, and sodium were not used to evaluate potential matrix effects.

Surrogate/Internal Standard Recoveries

The surrogate recovered above the laboratory control limits in the TPH (GC/FID) low fraction analysis of sample MW-136. In addition, the laboratory noted that the internal standards recovered below the laboratory control limits in samples MW-28, MW-136, and DUP-REST-01 which was likely due to matrix interference. Therefore, the positive results for TPH (GC/FID) low fraction in these samples may be biased high.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-66, MW-105, RA-3156: Dissolved solids
- MW-23, MW-110, MW-111, EB-REST-03: Nitrate-nitrite
- MW-66, MW-110, EB-REST-01, EB-REST-04: Chloride, fluoride, sulfate

The RPDs for chloride and sulfate in the duplicate analyses performed on sample EB-REST-01 exceeded the laboratory-defined control limit (5%). However, the results in the parent and duplicate samples were less than 5x the RL so laboratory duplicate RPDs were not applicable.

Field Duplicates

Samples MW-113/DUP-REST-01, MW-134/DUP-REST-03, and MW-60/DUP-REST-04 were submitted as the field duplicate pairs.

The RPD for TPH (GC/FID) low fraction (47.9%) was above the acceptance criteria (30%) in field duplicate pair MW-113 and DUP-REST-01. Therefore, the positive results for TPH (GC/FID) low fraction in samples MW-133 and DUP-REST-01 may be considered estimated.

The variability for nitrate-nitrite in field duplicate pair MW-134 and DUP-REST-03 did not meet the acceptance limits as the absolute difference was greater than the RL (nitrate-nitrite was detected greater than five times the RL in sample MW-134 and not detected in the field duplicate sample). Therefore, the positive and nondetect results for nitrate-nitrite in samples MW-134 and DUP-REST-03 may be considered estimated.

The RPD for fluoride (41.1%) was above the acceptance criteria (30%) in field duplicate pair MW-60 and DUP-REST-04. In addition, the variability for benzene and TPH (GC/FID) low fraction in field duplicate pair MW-60 and DUP-REST-04 did not meet the acceptance limits as the absolute differences were greater than the RL. Therefore, the positive results for fluoride, benzene, and TPH (GC/FID) low fraction in samples MW-60 and DUP-REST-04 may be considered estimated.

Lab Report L1231153

Other

RLs for dissolved solids n all samples except the equipment blank were 2-10 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the nitrate-nitrite analyses of samples NCL-34A and MW-108were diluted 100-fold due to sulfide interference. Therefore, the RLs for nitrate-nitrite in these samples were elevated accordingly.

The laboratory noted that the VOC analysis of sample NCL-34A was diluted 20-fold due to elevated concentrations of target and non-target compounds that would have exceeded the

calibration range if not diluted. Therefore, the RLs for VOCs in this sample were elevated accordingly.

The laboratory noted that the VOC analysis of sample MW-108 was diluted 5-fold due to foaming at the time of analysis. Therefore, the RLs for VOCs in this sample were elevated accordingly.

Several samples were analyzed at dilutions for nitrate-nitrite, chloride, fluoride, and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for nitrate/nitrite, chloride, fluoride, and sulfate since these analytes were detected above the RLs in the diluted samples. The RLs for select VOCs in sample MW-49 were elevated accordingly.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the VOC method blank: carbon disulfide, 2-butanone, and naphthalene. Carbon disulfide was detected in sample MW-108 at a concentration less than 10 times the associated method blank concentration. Therefore, this result may include measurement contributions from laboratory sources.

LCS

The LCS %R for naphthalene (137%) was above the laboratory-defined limits (54-135%), in QC batch WG1497262. However, this compound was not detected in the associated samples so there is no impact on data usability.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following sample:

- NCL-44, MW-108: Dissolved solids
- EB-NCL-01: Nitrate-nitrite, chloride, fluoride, sulfate

All criteria were met.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following sample:

- MW-45: Nitrate-nitrite
- MW-18: Fluoride
- NCL-44: Dissolved metals

The %Rs for dissolved manganese in the MS and MSD performed on sample NCL-44 were below the laboratory-defined recovery limits (75-125%). However, the concentration of this analyte in the unspiked sample was greater than four times the spiked concentration; thus, the recoveries of dissolved manganese were not used to evaluate potential matrix effects.

Other

RLs for dissolved solids in all samples except the equipment blank were 2.5-10 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

Several samples were analyzed at dilutions for methyl tert-butyl ether, nitrate-nitrite, chloride, and/or sulfate but the laboratory did not include a sample narrative explaining the

dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for methyl tert-butyl ether, nitrate/nitrite, chloride, and sulfate since these analytes were detected above the RLs in the diluted samples.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: total chromium, carbon disulfide, 2-butanone, and naphthalene. Total chromium in sample MW-8 was detected at a concentration within five times the method blank concentration. Therefore, this result may include measurement contributions from laboratory sources.

Trip Blanks

Carbon disulfide was detected in the trip blank TRIP BLANK-TMD-01. Carbon disulfide was detected in sample MW-46R less than 10 times the concentration in the associated trip blank. Therefore, this sample may include measurement contributions from transport from the field to the laboratory.

LCS

The LCS %R for naphthalene (137%) was above the laboratory-defined limits (54-135%), in QC batch WG1497262. However, this compound was not detected in the associated samples so there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-27, MW-46R: Nitrate-Nitrite
- MW-20: Chloride, fluoride, sulfate

The %Rs of chloride and sulfate in the MS/MSD performed on sample MW-20 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of chloride and sulfate were not used to evaluate potential matrix effects.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-25: Chloride, fluoride, sulfate

All criteria were met.

Other

RLs for dissolved solids in all samples except the equipment blank were 5-40 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the cyanide and nitrate-nitrite analyses of sample MW-86 were diluted 50-fold and 20-fold, respectively, due to sulfide interference. Therefore, the RLs for cyanide and nitrate-nitrite in this sample were elevated accordingly.

The laboratory noted that the following sample analyses were diluted due to due to foaming at the time of analysis. . Therefore, the RLs for analytes listed below in the corresponding sample were elevated accordingly.

- MW-86: TPH (GC/FID) low fraction (50-fold)
- MW-86: VOCs (20-fold)
- MW-84: VOCs (5-fold)
- MW-3, MW-75, MW-78, MW-122: TPH (GC/FID) low fraction (50-fold)
- MW-3, MW-75, MW-77: VOCs (25-fold)

Several samples were analyzed at dilutions for calcium, sodium, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, chloride, fluoride. and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for calcium, sodium, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, chloride, fluoride, and sulfate since these analytes were detected above the RLs in the diluted samples.

Released to Imaging: 11/21/2023 10:16:55 AM

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: nitrate-nitrite, tetrachloroethene, and total sodium. The analytes listed below were detected in the corresponding samples at concentrations within five times the method blank concentration for inorganic analytes and within 10 times the method blank concentration for organic analytes. Therefore, these results may include measurement contributions from laboratory sources.

- Nitrate-nitrite: MW-3, MW-22A, OCD-1R, OCD-3
- Total sodium: EB-EP-04
- Tetrachloroethene: OCD-3

Equipment Blanks

Total sodium was detected in the equipment blank sample. However, the result for total sodium in the equipment blank was less than five times the concentration detected in the associated method blank; therefore, the result for total sodium in the equipment blank was probably the result of laboratory method blank contamination and did not affect any associated field samples.

LCS

The LCS %R for dissolved solids (79.8%) was below the laboratory-defined limits (85-115%) in QC batch WG1498158. Therefore, the positive and nondetect results for dissolved solids in samples MW-11A, OCD-5, DUP-EP-02, DUP-EP-03, and EB-EP-04 may be biased low.

The LCS %Rs for chlorobenzene (128%) and tetrachloroethene (135%) were above the laboratory-defined limits (80-121% and 72-132%, respectively) in QC batch WG1497524. However, since these compounds were not detected in the samples from this QC batch, there is no impact on data usability.

The LCS %Rs for n-butylbenzene (68%), sec-butylbenzene (74.6%), and 1,3,5-trimethylbenzene (75.2%) were below the laboratory-defined limits (73-125%, 75-125%, and 76-122%, respectively) in QC batch WG1497747. Therefore, the nondetect results for n-butylbenzene, sec-butylbenzene, and 1,3,5-trimethylbenzene in samples from this QC batch, MW-1R, MW-2A, MW-10, MW-11A, MW-15, MW-76, MW-78, MW-82, MW-83, MW-123, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, and DUP-EP-02, may be biased low.

The LCS %R for tetrachloroethene (158%) was above the laboratory-defined limits (72-132%) in QC batch WG1497747. Therefore, the positive result for tetrachloroethene in sample OCD-3 may be biased high.

The LCS/LCSD RPD for bromomethane (29.5%) was above the laboratory-defined limit (25%) in QC batch WG1498067. However, since this compound was not detected in the sample in this QC batch, no data interpretation issues were noted.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-3, OCD-2A: Nitrate-Nitrite
- MW-22A, MW-80, DUP-EP-03: Chloride, fluoride, sulfate
- OCD-2A: Dissolved metals
- MW-10, MW-122: Total metals

The %Rs of chloride and sulfate in the MS and/or MSD performed on samples MW-80, MW-22A, and DUP-EP-03 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of these analytes in the unspiked sample were greater than four times the spiked concentrations; thus, the recoveries of chloride and sulfate were not used to evaluate potential matrix effects.

The %Rs of total manganese in the MS and MSD performed on sample OCD-2A were outside of the laboratory-defined recovery limits (75-125%). However, the concentration of this analyte in the unspiked sample was greater than four times the spiked concentration; thus, the recoveries of total manganese were not used to evaluate potential matrix effects.

The %Rs of total calcium, manganese, and sodium in the MS and/or MSD performed on samples MW-10 and MW-122 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of these analytes in the unspiked samples were greater than four times the spiked concentrations; thus, the recoveries of total calcium, manganese, and sodium were not used to evaluate potential matrix effects.

Surrogate Recoveries

The surrogates recovered below the laboratory control limits in the 20-fold diluted TPH (GC/FID) high fraction analyses of samples MW-76, MW-77, MW-78, MW-84, and MW-86. However, there is no impact on data usability due to this issue since the samples were diluted $\geq$10-fold.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-11A, MW-81, MW-122, OCD-2A: Dissolved solids
- MW-79, MW-80, OCD-5, DUP-EP-02: Nitrate-Nitrite
- MW-78, MW-82, EB-EP-04: Chloride, fluoride, sulfate

The RPD (45.2%) for dissolved solids in the duplicate analysis performed on sample MW-11A exceeded the acceptance criteria used in this evaluation (20%). Therefore, the positive result for dissolved solids in sample MW-11A may be considered estimated.

Field Duplicates

Samples MW-22A/DUP-EP-02 and MW-3/DUP-EP-03 were submitted as the field duplicate pairs. All criteria were met.

Other

RLs for dissolved solids in all samples except sample TEL-3 were 1.33-2 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids . There is no impact on data usability since dissolved solids results were detected above the RLs in the affected samples.

Several samples were analyzed at dilutions for VOCs, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, chloride, and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for select VOCs, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, chloride, and sulfate since these analytes were detected above the RLs in the diluted samples.

The laboratory noted that the TPH (GC/FID) low fraction analysis of sample TEL-4 was diluted 10-fold due to foaming at the time of analysis. Therefore, the RL for TPH (GC/FID) low fraction in this sample was elevated accordingly.

The laboratory noted that the VOC analysis of sample TEL-4 was diluted 5-fold due to matrix interference. Therefore, the RLs for VOCs in this sample were elevated accordingly.

The laboratory noted that the cyanide analysis of sample MW-49 was diluted 5-fold due to sulfide interference. Therefore, the RL for cyanide in this sample was elevated accordingly.

Standard Conditions

The laboratory indicated that the pH was outside of the requirement ($\leq$2) for samples TEL-4, MW-49, and DUP-TEL-4 for TPH (GC/FID) high fraction. However, since these samples were prepared for TPH (GC/FID) high fraction less than seven days day after collection, there is no adverse impact on the data usability.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Equipment Blanks

Dissolved solids was detected in the equipment blank, EB-TEL-01. Dissolved solids was detected in the associated samples at concentrations greater than five times the equipment blank concentration; therefore, there is no impact on data usability.

LCS/LCSD

The %Rs for bromomethane (164%) and trichloroethene (125%) in the LCS were above the laboratory-defined limits (10-160% and 78-124%, respectively) in QC batch WG1560650. These compounds were not detected in the associated sample, TEL-3; therefore, there is no impact on data usability.

The RPDs for acetone (31.4%) and 2-butanone (20.1%) in the LCS/LCSD were above the laboratory-defined limits (27% and 20%, respectively) in QC batch WG1560663. These compounds were not detected in the associated samples, DUP-TEL-01, EB-TEL-01, and TRIP BLANK-TEL-01; therefore, there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- TEL-3: Nitrate-nitrite
- TEL-4: Total metals

The %R of nitrate-nitrite MS performed on sample TEL-3 (87.6%) was below the laboratory-defined recovery limits (90-110%); thus, the nondetect results for nitrate-nitrite in samples TEL-4, TEL-3, MW-49, and DUP-TEL-01 may be biased low.

The %Rs for total calcium, manganese, and sodium were outside of the acceptance limits (75-125%) in the MS and/or MSD performed on sample TEL-4. However, the concentrations of, total calcium, manganese, and sodium in the unspiked sample were greater than four times the concentrations spiked; thus, the recoveries of these analytes were not used to evaluate potential matrix effects.

The %R of total nickel in the MSD performed on sample TEL-4 (66.8%) was below the laboratory-defined recovery limits (75-125%). Although total nickel was not reported in the parent sample, this result is indicative of a potential low bias in other project samples. Thus, the positive result for total nickel in sample MW-49 may be biased low.

Laboratory Duplicates

Laboratory duplicate analysis was performed on sample EB-TEL-01 for chloride, fluoride, and sulfate. All criteria were met.

Field Duplicates

Samples TEL-4/DUP-TEL-01 were submitted as the field duplicate pair. The RPD (68%) for total chromium did not meet the acceptance limits (<30%). Therefore, the positive results for total chromium in samples TEL-4 and DUP-TEL-01 may be considered estimated.

Lab Report L1271284

Other

RLs for dissolved solids in several samples were two times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume either due to elevated concentrations of dissolved solids . There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

Several samples were analyzed at dilutions for TPH (GC/FID) high fraction, VOCs, chloride, sulfate, fluoride, and/or nitrate-nitrite but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted due to the presence of the target

analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for select VOCs, TPH (GC/FID) high fraction, chloride, sulfate, and fluoride since these analytes were detected above the RLs in the diluted samples. The RLs for select VOCs in sample MW-108 were elevated accordingly.

The laboratory noted that the VOC analysis of sample MW-55 was diluted 10-fold due to foaming at the time of analysis. Therefore, the RLs for VOCs in this sample were elevated accordingly.

A discrepancy was noted with select laboratory sample IDs that were handwritten on the chain-of-custody versus the actual laboratory sample IDs that were logged in by the laboratory for all samples except MW-45. The samples were analyzed for the requested analyses so there is no impact on data usability due to this issue.

Standard Conditions

The laboratory indicated that VOC analysis for the trip blank, TRIP BLANK-NCL-01, was performed using a vial with headspace. Therefore, the nondetect results for all VOCs in this sample are potentially biased low.

Holding Times

All samples submitted for dissolved solids analysis were prepared slightly outside of the 7-day holding time. However, since all samples were prepared for dissolved solids on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: dissolved solids, chloride, total vanadium, and trichloroethene. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum method blank concentration for inorganic analytes; affected analytes were detected in the corresponding samples greater than 10 times the method blank concentrations for organic analytes. Therefore, these results may include measurement contributions from laboratory sources.

- Chloride: NCL-49, DUP-NCL-01, EB-NCL-01

Equipment Blanks

Dissolved solids, chloride*, and TPH (GC/FID) high fraction were detected in the equipment blank, EB-NCL-01. Dissolved solids was detected in the corresponding samples at concentrations greater than five times the equipment blank concentration so there is no impact on data usability. The analyte listed below was detected in the corresponding samples at concentrations within 10 times the method blank concentration for organic analytes. Therefore, these results may include measurement contributions from laboratory sources.

- TPH (GC/FID) high fraction: NCL-49, DUP-NCL-01, MW-53R

*Chloride was detected in the equipment blank sample at a concentration less than five times the associated method blank concentration; therefore, the equipment blank result for chloride was

probably the result of laboratory method blank contamination and did not affect any associated field samples.

LCS/LCSD

The LCS/LCSD RPDs for acetone (31.4%) and 2-butanone (20.1%) were above the laboratory-defined limits (27% and 20%, respectively), in QC batch WG1560663. However, since these compounds were not detected in the sample associated with this QC batch, there is no impact on data usability.

The LCS %R for trichloroethene (145%) was above the laboratory-defined limits (78-124%), in QC batch WG1560666. However, since this compound was not detected in the samples associated with this QC batch or since trichloroethene was reported in a different QC batch for the associated samples, there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-45, MW-54A: Nitrate-nitrite
- MW-108: Chloride, fluoride
- EB-NCL-01: Chloride, fluoride, sulfate

The %R of nitrate-nitrite in the MS performed on sample MW-54A (118%) was above the laboratory-defined recovery limits (90-110%). Thus, the positive results for nitrate-nitrite in samples NCL-32, NCL-49, and DUP-NCL-01 may be biased high.

Surrogate Recoveries

The surrogate recovered above the laboratory control limits in the 10-fold diluted TPH (GC/FID) high fraction analysis of sample NCL-33. However, there is no impact on data usability due to this issue since the sample was diluted $\geq$10-fold.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- NCL-44: Nitrate-nitrite
- MW-55: Cyanide
- MW-108, EB-NCL-01: Chloride, fluoride, sulfate

All criteria were met.

Field Duplicates

Samples NCL-49 and DUP-NCL-01 were submitted as field duplicate pair. All criteria were met.

Lab Report L1271297

Sample identifiers cross-referenced to laboratory identifications are presented below.

Lab ID	Sample ID
L1271297-01	MW-21
L1271297-02	MW-46R
L1271297-03	TRIP BLANK-TMD-01
L1271297-04	NP-1

Other

RLs for dissolved solids in samples MW-21 and MW-46R were 2-5 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentrations of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

Samples MW-21 and MW-46R were analyzed at dilutions for VOCs, nitrate-nitrite, chloride, and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for select VOCs, nitrate-nitrite, chloride, and sulfate since these analytes were detected above the RLs in the diluted samples. The RLs for select VOCs in sample MW-21 were elevated accordingly.

Standard Conditions

The laboratory indicated that VOC analysis for the trip blank, TRIP BLANK-TMD-01, was performed using a vial with headspace. Therefore, the nondetect results for all VOCs in this sample are potentially biased low.

A discrepancy was noted with the nonconformance (NCF) circled on the chain-of-custody (COC). The laboratory indicated during this review that the NCF was due to missing sample containers for sample NP-1. Sample NP-1 was received by the laboratory one day after the remaining samples; since this sample arrived in good condition, the NCF notation was later removed from the COC by the laboratory.

Holding Times

Samples MW-21 and MW-46R were prepared slightly outside of the 7-day holding time for dissolved solids analysis. However, since all samples were prepared for dissolved solids analysis on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

Chloride was detected in the method blank. Chloride was detected in sample MW-46R at a concentration within five times the method blank concentration. Therefore, this result may include measurement contributions from laboratory sources.

Other

The laboratory noted that the VOC analysis of sample MW-75 was diluted 25-fold due to elevated concentrations of non-target analytes. Therefore, the RLs for VOCs in this sample were elevated accordingly.

RLs for dissolved solids in all samples except the equipment blanks were 4-50 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that the TPH (GC/FID) low fraction and/or VOC analyses of select samples were diluted due to foaming at the time of analysis. Therefore, the RLs for TPH (GC/FID) low fraction and/or VOCs in these samples were elevated accordingly.

- MW-86 (200-fold): TPH (GC/FID) low fraction
- MW-86 (20-fold): VOCs
- MW-120 (5-fold): VOCs
- MW-84 (10-fold): VOCs
- MW-3, MW-122 (50-fold): TPH (GC/FID) low fraction

Several samples were analyzed at dilutions for nitrate-nitrite, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, calcium, sodium, chloride, fluoride, and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for nitrate-

nitrite, TPH (GC/FID) high fraction, calcium, sodium, chloride, fluoride, and sulfate since these analytes were detected above the RLs in the diluted samples. The RLs for TPH (GC/FID) low fraction were elevated accordingly in select samples.

Standard Conditions

The laboratory indicated that the pH was outside of the requirement (<2) for sample MW-86 for TPH (GC/FID) high fraction. However, since this sample was prepared for TPH (GC/FID) high fraction analysis less than seven days day after collection, there is no adverse impact on the data usability.

Holding Times

Samples MW-5A, MW-7A, MW-18A, MW-79, MW-120, MW-121, MW-124, OCD-5, OCD-8A, DUP-EP-01, DUP-EP-02, EB-EP-01, EB-EP-02, EB-EP-03, and EB-EP-04 were prepared slightly outside of the 7-day holding time. However, since these samples were prepared for dissolved solids analysis on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: total vanadium, total sodium, cis-1,2-dichloroethene, carbon disulfide, TPH (GC/FID) low fraction, and TPH (GC/FID) high fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum method blank concentration for inorganic analytes and within 10 times the method blank concentrations for organic analytes. Therefore, these results may include measurement contributions from laboratory sources.

- TPH (GC/FID) low fraction: MW-3, MW-7A, MW-87, MW-88, OCD-1R, OCD-2A, OCD-3, OCD-4
- cis-1,2-Dichloroethene: OCD-6
- Carbon disulfide: MW-70
- TPH (GC/FID) high fraction: MW-18A, MW-87, MW-124, EB-EP-01, EB-EP-02, EP-EB-03, EP-EB-04

Equipment Blanks

The following analytes were detected in the equipment blank samples, EB-EP-01, EB-EP-02, EP-EB-03, and EP-EB-04: Dissolved solids, nitrate-nitrite, chloride, sulfate, and/or TPH (GC/FID) high fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum equipment blank concentration for inorganic analytes. Therefore, these samples may include measurement contributions from the field.

- Nitrate-nitrite: MW-2A, MW-3, MW-22A, OCD-1R, DUP-EP-03
- Chloride: MW-2A, MW-3, MW-4A, MW-5A, MW-7A, MW-10, MW-22A, MW-74, MW-75, MW-76, MW-79, MW-83, MW-84, MW-86, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-7AR, DUP-EP-01, DUP-EP-02, DUP-EP-03

- Sulfate: MW-2A, MW-3, MW-4A, MW-7A, MW-10, MW-22A, MW-75, MW-76, MW-83, MW-121, MW-122, MW-123, OCD-1R, DUP-EP-01, DUP-EP-02, DUP-EP-03

*Note that the results for TPH (GC/FID) high fraction in the equipment blanks were less than 10 times the concentration detected in the associated method blank; therefore, the results for TPH (GC/FID) high fraction in the equipment blanks were probably the result of laboratory method blank contamination and did not affect any associated field samples.

LCS/LCSD

The LCS %Rs for carbon tetrachloride (128%) and 1,1,1-trichloroethane (126%) were above the laboratory-defined limits (68-126% and 73-124%, respectively) in QC batch WG1560682. However, since these compounds were not detected in the samples in this QC batch, there is no impact on data usability.

The LCS %R for trans-1,3-dichloropropene (77.2%) was below the laboratory-defined limits (78-124%) in QC batch WG1560699. This compound was not detected in the associated samples, MW-83, OCD-1R, OCD-2A, and DUP-EP-03 and may be biased low.

The LCS %Rs for bromomethane (185%) and trichloroethene (133%) were above the laboratory-defined limits (10-160% and 78-124%, respectively), in QC batch WG1560700. However, since these compounds were not detected in the samples in this QC batch, there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-75, MW-7A, DUP-EP-03: Nitrate-nitrite
- OCD-8A: Cyanide
- MW-121, MW-123, EB-EP-01: Chloride, fluoride, sulfate
- MW-18A: Total mercury
- MW-2A, OCD-6, MW-87: Total metals

The %Rs of nitrate-nitrite in the MS and MSD performed on sample MW-7A (89.2%/88.4%) and the MS performed on sample DUP-EP-03 (86.2%) were below the laboratory-defined recovery limits (90-110%); therefore, the positive and nondetect results for nitrate-nitrite in all groundwater samples in this laboratory report except MW-75 may be biased low.

The %Rs of sulfate and chloride in the MS and MSDs performed on samples MW-121 and MW-123 were outside of the laboratory-defined recovery limits (80-120%). However, the concentrations of these analytes in the unspiked samples were greater than four times the spiked concentrations; thus, the recoveries of sulfate and chloride were not used to evaluate potential matrix effects.

The %Rs of total manganese and total sodium in the MS and/or MSD performed on sample MW-2A were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of total manganese and total sodium in the unspiked sample were greater than four

times the concentration spiked; thus, the recoveries of total manganese and total sodium were not used to evaluate potential matrix effects.

The %Rs of total calcium, total manganese, and total sodium in the MS and MSDs performed on samples OCD-6 and MW-87 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of total calcium, total manganese, and total sodium in the unspiked samples were greater than four times the concentration spiked; thus, the recoveries of total calcium, total manganese, and total sodium were not used to evaluate potential matrix effects.

Surrogate Recoveries

The surrogate recovered outside of the laboratory control limits in the 20-fold diluted TPH (GC/FID) high fraction analyses of samples MW-84 and MW-86, and the 10-fold diluted TPH (GC/FID) high fraction analysis of sample MW-75. However, there is no impact on data usability due to this issue since the samples were diluted ≥10-fold.

The surrogate recovered above the laboratory control limits in the TPH (GC/FID) low fraction analysis of sample MW-2A. However, there is no impact on data usability due to this issue since TPH (GC/FID) low fraction was not detected in sample MW-2A.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-5A, MW-7A: Dissolved solids
- MW-5A, MW-86, OCD-8A, EB-EP-01: Nitrate-nitrite
- MW-121, MW-123, EB-EP-01: Chloride, fluoride, sulfate

All criteria were met.

Field Duplicates

Samples MW-7A/DUP-EP-01, MW-22A/DUP-EP-02, and MW-3/DUP-EP-03 were submitted as the field duplicate pairs. All criteria were met in the field duplicate pair MW-22A/DUP-EP-02.

The RPDs for total arsenic (43.4%) and total iron (48.9%) in field duplicate pair MW-7A/DUP-EP-01 did not meet the acceptance limits (<30%). Therefore, the positive results for total arsenic and total iron in samples MW-7A and DUP-EP-01 may be considered estimated.

The results for TPH (GC/FID) low fraction and sulfate were <5x the RL in field duplicate pair, MW-3/DUP-EP-03. The absolute differences were greater than the RL. Therefore, the positive results for TPH (GC/FID) low fraction and sulfate in samples MW-3 and DUP-EP-03 may be considered estimated.

Other

The laboratory noted that the VOC analyses of samples MW-23, MW-43, MW-61, MW-62, MW-96, MW-98, and MW-106 were diluted 10-fold, 50-fold, 50-fold, 20-fold, 250-fold, 50-fold, and 200-fold, respectively, due to elevated concentrations of target and non-target analytes. Therefore, the RLs for VOCs in these samples were elevated accordingly.

RLs for dissolved solids in several samples were 1.33-3.33 times higher than the associated method blank but the laboratory did not include a sample narrative explaining the elevated RLs. The samples were likely prepared at a reduced volume either due to the elevated concentration of dissolved solids. There is no impact on data usability since dissolved solids results were above the RLs in the affected samples.

The laboratory noted that sample KWB-8 was diluted 20-fold for nitrate-nitrite due to sulfide interference. Therefore, the RL for nitrate-nitrite in this sample was elevated accordingly.

Several samples were analyzed at dilutions for nitrate-nitrite, VOCs, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, cyanide, metals, chloride, fluoride, and/or sulfate but the laboratory did not include a sample narrative explaining the dilutions. The samples were likely diluted either due to matrix interference and/or the presence of target and/or non-target analytes which would have exceeded the calibration range if undiluted. There is no impact on data usability for nitrate-nitrite, TPH (GC/FID) low fraction, TPH (GC/FID) high fraction, chloride, fluoride, and sulfate since these analytes were detected above the RLs in the diluted samples. The RLs for cyanide and select metals were elevated accordingly in select samples.

Standard Conditions

The laboratory indicated that the pH was outside of the requirement (<2) for the following sample analyses. However, since these samples were prepared for the analyses listed below less than seven days day after collection, there is no adverse impact on the data usability.

- TPH (GC/FID) low fraction: MW-43, MW-62R, MW-96, MW-106, MW-109
- TPH (GC/FID) high fraction: MW-23, MW-39, MW-43, MW-96, MW-102, MW-106, MW-109, KWB-8

The laboratory indicated that metals containers were not received for samples RA-4798 and RA-4196. Therefore, aliquots for metals analyses were prepared and preserved by the laboratory using volume from unpreserved containers provided for other analyses of these two samples. Since the samples were preserved for metals by the laboratory more than 24 hours after collection, the positive results for metals in samples RA-4798 and RA-4196 are potentially biased low.

Holding Times

Samples RA-4798 and RA-4196 were analyzed 17 days after the 14-day holding time for benzene due to carryover in the original analyses. **Due to this significant holding time exceedance (>2x the holding time), the nondetect results for benzene in samples RA-4798 and RA-4196 collected on 10/6/20 are not useable for project objectives.** Due to this issue, these samples were re-collected on 11/6/20 and submitted in report L1283074. The nondetect results for

benzene in samples RA-4798 and RA-4196 collected on 11/6/20 in report L1283074 should be used for project objectives.

Samples MW-23, MW-29, MW-39, MW-50, MW-57, MW-61, MW-62, MW-64, MW-90, MW-98, MW-101, MW-102, MW-104, MW-105, MW-106, MW-113, MW-118, MW-119, MW-126A, MW-126B, MW-134, MW-135, MW-136, MW-139, KWB-1A, KWB-7, KWB-8, KWB-11A, KWB-11B, KWB-12A, KWB-12B, RA-4196, RA-4798, DUP-REST-01, DUP-REST-02, DUP-REST-03, DUP-REST-05, EB-REST-01, EB-REST-02, EB-REST-03, and EB-REST-05 were prepared slightly outside of the 7-day holding time. However, since these samples were prepared for dissolved solids analysis on the 7th day after collection, there is no adverse impact on the data usability.

Laboratory Method Blanks

The following analytes were detected in the method blanks: dissolved solids, total sodium, total manganese, benzene, carbon disulfide, and TPH (GC/FID) high fraction. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum method blank concentration for inorganic analytes and within 10 times the method blank concentrations for organic analytes. Therefore, these results may include measurement contributions from laboratory sources.

- Dissolved solids: EB-REST-01
- Total manganese: MW-61, MW-62, MW-116, MW-119, MW-136, KWB-12A
- Benzene: DUP-REST-04, EB-REST-01, EB-REST-04, TRIP BLANK-REST-03
- Carbon disulfide: MW-29, MW-113, MW-135, KWB-7, KWB-8, KWB-11A, KWB-11B, RA-4196, RA-4798, DUP-REST-01, DUP-REST-04, EB-REST-01, EB-REST-04, TRIP BLANK-REST-03
- TPH (GC/FID) high fraction: MW-57, MW-115, MW-116, MW-117, MW-118, MW-119, MW-125, MW-126A, MW-126B, MW-134, MW-135, MW-136, KWB-1A, EB-REST-04

Equipment Blanks

The following analytes were detected in the equipment blank samples, EB-REST-01, EB-REST-02, EP-REST-03, EP-REST-04, and/or EP-REST-05: Dissolved solids**, chloride, sulfate, benzene**, carbon disulfide**, toluene, and/or TPH (GC/FID) high fraction**. The analytes listed below were detected in the corresponding samples at concentrations within five times the maximum equipment blank concentration for inorganic analytes and within 10 times the maximum equipment blank concentration for organic analytes. Therefore, these samples may include measurement contributions from the field.

- Chloride: MW-28, MW-29, MW-50, MW-52, MW-60, MW-61, MW-90, MW-98, MW-102, MW-106, MW-114, MW-115, MW-116, MW-117, MW-118, MW-119, MW-125, MW-126A, MW-126B, MW-130, MW-134, MW-135, MW-136, MW-139, KWB-1A, KWB-8, KWB-12A, KWB-12B, RA-4798, RA-4196, KWB-11A, KWB-11B, DUP-REST-05

- Sulfate: MW-23, MW-29, MW-43, MW-52, MW-60, MW-66, MW-90, MW-96, MW-98, MW-102, MW-105, MW-106, MW-114, MW-130, MW-139, KWB-11A, KWB-11B
- Toluene: MW-28, MW-39, MW-43, MW-62R, MW-66, MW-90, MW-102, MW-105, MW-106, MW-109, MW-113
- TPH (GC/FID) high fraction: MW-52, MW-57*, MW-115*, MW-116*, MW-117*, MW-118*, MW-119*, MW-125*, MW-126A*, MW-126B*, MW-134*, MW-135*, MW-136*, KWB-1A*, KWB-11A, KWB-11B, DUP-REST-03, DUP-REST-05

*This result was also less than 10 times the associated method blank concentration.

**Note that the results for benzene and carbon disulfide in equipment blank samples EB-REST-01 and EB-REST-04, dissolved solids in equipment blank sample EB-REST-01, and TPH (GC/FID) high fraction in equipment blank sample EB-REST-04 were less than 10 times the concentration detected in the associated method blank; therefore, the results for benzene, carbon disulfide, and/or TPH (GC/FID) high fraction in these equipment blanks were probably the result of laboratory method blank contamination and did not affect any associated field samples.

Trip Blanks

Benzene and carbon disulfide were detected in one of the trip blank samples, TRIP BLANK-REST-03. However, the results for benzene and carbon disulfide in the trip blank were less than 10 times the concentration detected in the associated method blank; therefore, the results for these analytes in the trip blank were probably the result of laboratory method blank contamination and did not affect any associated field samples.

LCS/LCSD

The LCS %R for trans-1,3-dichloropropene (77.2%) was below the laboratory-defined limits (78-124%), in QC batch WG1560699. This compound was not detected in the associated samples, MW-28, MW-52, MW-60, MW-64, MW-66, MW-102, MW-105, MW-109, MW-110, MW-114, MW-115, MW-116, MW-125, and MW-130, and may be biased low.

The LCS %Rs for bromomethane (185%) and trichloroethene (133%) were above the laboratory-defined limits (10-160% and 78-124%, respectively), in QC batch WG1560700. However, since these compounds were not detected in the samples in this QC batch, there is no impact on data usability.

The LCS %R for trichloroethene (126%) was above the laboratory-defined limits (78-124%), in QC batch WG1560784. However, since this compound was not detected in the samples associated with this QC batch, there is no impact on data usability.

The LCS %R for naphthalene (146%) was above the laboratory-defined limits (54-135%), in QC batch WG1560896. However, since this compound was not detected in the samples associated with this QC batch, there is no impact on data usability.

MS/MSDs

MS and/or MS/MSD analyses were performed on the following samples:

- MW-50, MW-52, MW-64, MW-139, KWB-12A, RA-4196: Nitrate-nitrite
- KWB-1A, KWB-7: Cyanide
- MW-52, MW-66, MW-96, MW-126A, EB-REST-05, RA-4798: Chloride, fluoride, sulfate
- MW-29, MW-119: Total metals
- KWB-12A: TPH (GC/FID) low fraction

The %Rs of nitrate-nitrite in the MSD performed on sample MW-52 and the MS performed on sample MW-50 were outside of the laboratory-defined recovery limits (90-110%). However, the concentrations of nitrate-nitrite in the unspiked samples were greater than four times the concentration spiked; thus, the recoveries of nitrate-nitrite were not used to evaluate potential matrix effects.

The %Rs of sulfate in the MS and/or MSDs performed on samples MW-52, MW-126A, and RA-4798 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of sulfate in the unspiked samples were greater than four times the concentration spiked; thus, the recoveries of sulfate were not used to evaluate potential matrix effects.

The %Rs of nitrate-nitrite in the MS and MSD performed on sample RA-4196 89.9%/83.5%), the MSD performed on sample MW-64 (85.2%), and the MS performed on sample KWB-12A (87.6%), and the RPD in the MS/MSD performed on sample MW-64 (22.5%) were outside of the laboratory-defined limits (90-110% and 20%, respectively); therefore, the positive and nondetect results for nitrate-nitrite in all groundwater samples in this laboratory report except MW-50, MW-52, and MW-139 may be uncertain.

The %Rs of cyanide in the MS and MSD performed on sample KWB-7 (87.7%/84.9%) were outside of the laboratory-defined limits (90-110%); therefore, the positive and nondetect results for cyanide in samples MW-28, MW-43, MW-52, MW-60, MW-66, MW-136, DUP-REST-04, DUP-REST-05, KWB-7, KWB-8, KWB-11A, KWB-11B, KWB-12A, and KWB-12B may be biased low.

The %R of chloride in the MSD performed on sample MW-66 (79.9%) was outside of the laboratory-defined limits (80-120%); therefore, the positive results for chloride in all groundwater samples in this laboratory report except MW-52, MW-96, MW-126A, and RA-4798 may be biased low.

The %R of sulfate in the MS performed on sample MW-96 (66.2%) was outside of the laboratory-defined limits (80-120%); therefore, the positive results for sulfate in all groundwater samples in this laboratory report except MW-52, MW-66, MW-126A, and RA-4798 may be biased low.

The %Rs of total calcium and sodium in the MS and MSD performed on sample MW-119 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of total calcium and sodium in the unspiked sample were greater than four times the concentration spiked; thus, the recoveries of total calcium and sodium were not used to evaluate potential matrix effects.

The %Rs of total calcium, manganese, and sodium in the MS and/or MSD performed on sample MW-29 were outside of the laboratory-defined recovery limits (75-125%). However, the concentrations of total calcium, manganese, and sodium in the unspiked sample were greater than four times the concentration spiked; thus, the recoveries of total calcium, manganese, and sodium were not used to evaluate potential matrix effects.

Surrogate Recoveries

The surrogate recovered outside of the laboratory control limits in the 10-fold diluted TPH (GC/FID) high fraction analyses of samples MW-23, MW-62R, and MW-102. However, there is no impact on data usability due to this issue since the samples were diluted ≥10-fold.

Laboratory Duplicates

Laboratory duplicate analysis was performed on the following samples:

- MW-50, MW-117, MW-125, MW-139, KWB-8, KWB-11A, KWB-11B, KWB-12A, DUP-REST-03: Dissolved solids
- MW-60, MW-61, MW-62R, MW-102, KWB-8: Nitrate-nitrite
- MW-64, MW-66, MW-96, MW-113, MW-130, EB-REST-05: Chloride, fluoride, sulfate

The RPD for dissolved solids in the duplicate analysis performed on sample MW-117 (5.53%) exceeded the laboratory-defined control limit (5%). However, this RPD was less than the acceptance criteria used in this evaluation (20%); thus precision was deemed acceptable and no data interpretation issues were noted.

The RPDs for chloride in the duplicate analysis performed on sample EB-REST-05 (200%) and sulfate in the duplicate analysis performed on sample MW-96 (25%) exceeded the laboratory-defined control limit (15%). However, since the results were <5x the RL in the parent and duplicate samples, no data interpretation issues were noted.

Field Duplicates

Samples MW-113/DUP-REST-01, MW-104/DUP-REST-02, MW-134/DUP-REST-03, MW-60/DUP-REST-04, and KWB-12B/DUP-REST-05 were submitted as the field duplicate pairs. All criteria were met in samples MW-134/DUP-REST-03.

The results for total iron were <5x the RL in sample MW-113 and nondetect in the field duplicate, DUP-REST-01; the absolute difference was greater than the RL. Therefore, the positive and nondetect results for total iron in samples MW-113 and DUP-REST-01 may be considered estimated.

The results for carbon disulfide were <5x the RL in the field duplicate pair MW-104 and DUP-REST-02; the absolute difference was greater than the RL. Therefore, the positive results for carbon disulfide in samples MW-104 and DUP-REST-02 may be considered estimated.

The results for nitrate-nitrite were <5x the RL in sample MW-60 and nondetect in the field duplicate, DUP-REST-04; the absolute difference was greater than the RL. Therefore, the positive

and nondetect results for nitrate-nitrite in samples MW-60 and DUP-REST-04 may be considered estimated.

The results for fluoride were <5x the RL in sample MW-60 and >5x the RL in the field duplicate, DUP-REST-04; the absolute difference was greater than the RL. Therefore, the positive results for fluoride in samples MW-60 and DUP-REST-04 may be considered estimated.

The results for cyanide were <5x the RL in sample KWB-12B and >5x the RL in the field duplicate, DUP-REST-05; the absolute difference was greater than the RL. Therefore, the positive results for cyanide in samples KWB-12B and DUP-REST-05 may be considered estimated.

Lab Report L1283074

Sample identifiers cross-referenced to laboratory identifications are presented below.

Sample ID	Lab ID
L1283074-01	RA-4196
L1283074-02	RA-4798
L1283074-03	EB-02
L1283074-04	DUP-02*
L1283074-05	TB-02

*Field duplicate of RA-4798

Data Review Checklist	Yes	No	Not applicable

Laboratory Method Blanks

Carbon disulfide was detected in the method blank. However, there is no impact on data usability since carbon disulfide was not detected in the associated samples.

MS/MSDs

MS/MSD analyses were performed on sample RA-4798 for VOCs. The RPDs for the majority of VOCs were above the laboratory-defined control limits. With the exception of 1,2-dichloroethane, the RPD issues do not have an impact on data usability since the affected compounds were not detected in sample RA-4798; therefore these RPD results are not summarized. The RPD for 1,2-dichloroethane (29%) was above the laboratory-defined control limit (27%). Therefore, the positive result for 1,2-dichloroethane in sample RA-4798 may be considered estimated.

Field Duplicates

Samples RA-4798/DUP-02 were submitted as the field duplicate pair. The results for methyl tert-butyl ether were <5x the RL in the field duplicate pair; the absolute difference was

greater than the RL. Therefore, the positive results for methyl tert-butyl ether in samples RA-4798 and DUP-02 may be considered estimated.

Released to Imaging: 11/21/2023 10:16:55 AM

Appendix C: Data Validation

Data reported by Pace Analytical in Mount Juliet, Tennessee, for the soil samples collected in September 2020 and the groundwater samples collected in October 2020 were reviewed to ensure that reporting analytical results met the data quality requirements contained in the United States Environmental Protection Agency (USEPA) *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA, January 2017), *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA, January 2017), and the individual methods, as applicable. Quality control (QC) data indicate that measurement data are sufficient to meet method quality objectives, reported data are defensible, and QC mechanisms were generally effective in ensuring measurement data reliability within the expected limits of sampling and analytical error.

The following sections discuss the QC issues identified during the data review for each of the data reports listed below.

September 2020 Data Packages	October 2020 Data Packages
L1267156	L1271213

Analytes that were detected in the both the associated blank and sample were evaluated as follows: Corresponding samples at concentrations within five times the maximum blank concentration for inorganic analytes and within 10 times the maximum blank concentrations for organic analytes may include measurement contributions from the laboratory (for method blanks) and/or field (for equipment and trip blanks).

The following criteria were used in evaluation of the field duplicates: When both results are ≥ five times the reporting limit (RL), relative percent differences (RPDs) must be <30%. When one or both results are < five times the RL, the absolute difference must be < the RL.

The following criteria were used in evaluation of laboratory duplicates: When both results are ≥ five times the RL, RPDs must be <20%.

Other

The laboratory noted that the TPH (GC/FID) low fraction data for all soil samples were reported at a 25-fold dilution. The laboratory did not include a sample narrative explaining the dilutions or if the dilutions were due to sample preparation. The results for TPH (GC/FID) low fraction were nondetect in all soil samples.

Laboratory Method Blanks

The following analyte was detected in the method blank: TPH (GC/FID) low fraction. This compound was nondetect in all soil samples, therefore, there was no effect on the reported sample data.

MS/MSDs

MS/MSD analyses were performed on the following samples:

- MW-145 (17): TPH (GC/FID) low fraction, C_{10}-C_{28} diesel range
- MW-147 (20): TPH (GC/FID) low fraction

All criteria were met.

Laboratory Duplicates

Laboratory duplicate analyses were performed on the following samples:

- MW-145 (17): Total solids

All criteria were met.

Released to Imaging: 11/21/2023 10:16:55 AM

Field Duplicates

The calculated relative percent differences (RPDs) between positive detections in field duplicate pair MW-146 (18)/DUP#1 met the acceptance limits.

Lab Report L1271213

Sample identifiers cross-referenced to laboratory identifications are presented below.

Other

Select results were reported below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) by the laboratory.

Equipment Blanks

The following compound was detected in the equipment blank sample, EB-01: benzene. However, since benzene was not detected in the groundwater samples, no data interpretation issues were noted.

Released to Imaging: 11/21/2023 10:16:55 AM

LCS

The LCS %R for acetone (210%) was above the laboratory-defined limits (19-160%), in QC batch WG1559818. However, since acetone was not detected in the samples in this QC batch, no data interpretation issues were noted.

The LCSD %R for tetrachloroethene (136%) was above the laboratory-defined limits (72-132%), in QC batch WG1560531. However, since tetrachloroethene was not detected in the sample in this QC batch, no data interpretation issues were noted.

The LCS/LCSD RPD for acetone (31.6%) was above the laboratory-defined limit (27%) in QC batch WG1560531. However, since acetone was not detected in the sample in this QC batch, no data interpretation issues were noted.

Field Duplicates

The calculated RPD between positive detections in field duplicate pair MW-145/Dup-01 met the acceptance limits.
