Re: Submittal of the *2020 Annual Discharge Report* and the *2020 Annual Groundwater Monitoring Report* for the HollyFrontier Navajo Refining LLC, Artesia Refinery, Discharge Permit GW-028

Dear Ms. McDill:

Please find attached electronic copies of the *2020 Annual Discharge Report* and the *2020 Annual Groundwater Monitoring Report*, which fulfill requirements of Section 2.E of Discharge Permit GW-028. If you should have any questions or comments regarding this report, please feel free to contact me at (575) 746-5487 or Jason Leik at (214) 970-8902.

Sincerely,

Kawika Tupou
Environmental Manager

Executive Summary

This *2020 Annual Groundwater Monitoring Report* documents groundwater monitoring and recovery activities conducted at the HollyFrontier Navajo Refining LLC (HFNR) Artesia Refinery (refinery) located at 501 East Main Street in Artesia, New Mexico. The refinery is subject to a Post-Closure Care Permit (PCC Permit) issued by the New Mexico Environment Department (NMED) in October 2003 and later modified in December 2010; as well as Discharge Permit GW-028 issued by New Mexico Energy, Minerals and Natural Resources Department Oil Conservation Division (OCD) on May 25, 2017. Both the PCC Permit and Discharge Permit require HFNR to conduct facility-wide groundwater monitoring to evaluate the presence, nature, and extent of groundwater impacts; and to remediate impacted groundwater. This report provides the results of all groundwater monitoring and remedial activities that were conducted to satisfy both the NMED PCC Permit and the OCD Discharge Permit.

The groundwater monitoring program consists of semiannual well gauging and groundwater sampling in accordance with the *2019 Facility-Wide Groundwater Monitoring Work Plan* (2019 FWGMWP) that was submitted to the NMED and OCD in June 2019 and approved on February 17, 2020. Additional sampling was conducted in 2020 in accordance with the December 28, 2018, submittal letter of the "*SWMU / AOC Group 3 Additional Corrective Action Investigation Report – Revision 2* (SWMU/AOC Group 3 Rev 2 transmittal letter) and NMED's subsequent response letter dated March 22, 2019. Remedial activities consist of recovery of phase-separated hydrocarbons (PSH) and impacted groundwater. The groundwater monitoring and remediation program covers the following refinery areas:

- The closed Tetra Ethyl Lead (TEL) Impoundment
- The closed North Colony Landfarm (NCL)
- The inactive Evaporation Ponds (EPs)
- Three Mile Ditch (TMD)
- The impacted vadose zone located beneath the refinery in the following other areas: Field East of Refinery, North Refinery, South Refinery, Reverse Osmosis (RO) Reject Fields, Cross-gradient of Refinery, and Up-gradient of Refinery

The 2020 groundwater monitoring results indicate physical and chemical groundwater conditions are generally consistent with historical data. Groundwater predominantly flows to the east beneath the refinery towards the Pecos River, and to the southeast beneath the EPs. Measurable PSH was present in wells located at or near the EPs, Field East of Refinery, North Refinery, NCL, South Refinery, and TEL areas in 2020, with a maximum measured thickness of 6.26 feet during the first semiannual event and 5.51 feet during the second semiannual event. The presence and distribution of PSH in 2020 was generally consistent with historical data and measured PSH thicknesses are overall stable to decreasing over time despite fluctuations inversely related to groundwater elevations. Groundwater elevations have generally decreased since 2017, with historical minimums observed in many wells with PSH during October 2020. The following constituents of concern (COCs) were detected in groundwater at concentrations in

Released to Imaging: 11/21/2023 10:16:55 AM

exceedance of critical groundwater screening levels (CGWSLs): total petroleum hydrocarbons (TPH) diesel range organics (DRO); select volatile organic compounds (VOCs) including target COCs benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), and naphthalene; select semi-volatile organic compounds (SVOCs); select total metals including target COC arsenic; and water quality parameters chloride, fluoride, sulfate, total dissolved solids (TDS), and nitrate/nitrite. COC concentrations in groundwater are generally stable to decreasing over time despite occasional fluctuations. Certain wells that previously exhibited increasing concentration trends have exhibited stable concentration trends over the most recent sampling events.

PSH and impacted groundwater were continually recovered at the refinery from an automated system of recovery trenches and recovery wells throughout 2020. An estimated 4,375,556 gallons of groundwater and an estimated 224,098 gallons of PSH were recovered through operation of the automated recovery system in 2020. An additional 102 gallons of PSH was manually recovered from wells not connected to the automated system by bailing or pumping on a periodic basis.

.

Released to Imaging: 11/21/2023 10:16:55 AM

1.0 Introduction

On behalf of HollyFrontier Navajo Refining LLC (HFNR), TRC Environmental Corporation (TRC) prepared this 2020 Annual Groundwater Monitoring Report (report) to summarize the results of groundwater monitoring and recovery activities conducted in 2020 at the Navajo Artesia Refinery (refinery) located at 501 East Main Street in Artesia, New Mexico. The location of the refinery is shown on Figure 1. The refinery has been in operation since the 1920s and processes crude oil into asphalt, fuel oil, gasoline, diesel, jet fuel, and liquefied petroleum gas.

The refinery is regulated under the Resource Conservation and Recovery Act (RCRA). In October 2003, the Secretary of the New Mexico Environment Department (NMED) issued a Post-Closure Care Permit (PCC Permit) to HFNR for the Artesia Refinery Facility (United States Environmental Protection Agency [US EPA] ID number NMD048918817). The PCC Permit was modified and reissued in December 2010 (NMED 2010). The PCC Permit authorizes and requires HFNR (the Permittee) to conduct post-closure care at the closed tetra ethyl lead (TEL) surface impoundment and the North Colony Landfarm (NCL) and to take appropriate actions to achieve RCRA closure of the inactive Evaporation Ponds (EPs). These areas and the locations of all existing monitoring and recovery wells are shown on Figure 2.

The PCC Permit requires HFNR to maintain a groundwater monitoring program to evaluate the effectiveness of the corrective action program for groundwater and to meet the requirements of New Mexico Administrative Code (NMAC) 20.4.1.500 (incorporating 40 Code of Federal Regulations Part 264, Subpart F) during the post-closure care period. The PCC Permit also requires HFNR to recover phase-separated hydrocarbon (PSH), where present, from the shallow groundwater.

The refinery is also regulated by the New Mexico Energy, Minerals and Natural Resources Department – Oil Conservation Division (OCD). The OCD issued a renewal to Discharge Permit GW-028 (OCD 2017a) on May 25, 2017 and modifications on June 29, 2017 (OCD 2017b), October 25, 2018 (OCD 2018a), and December 14, 2018 (OCD 2018b). Among other requirements, the Discharge Permit requires semiannual facility-wide groundwater monitoring and submittal of an annual report summarizing the groundwater monitoring and remediation conducted throughout each year.

This report provides the results of all groundwater monitoring and remedial activities that were conducted during 2020 to satisfy both the NMED PCC Permit and the OCD Discharge Permit. The format of this report follows specifications in Appendix E.4 of the PCC Permit.

Groundwater monitoring activities conducted in 2020 consisted of semiannual well gauging and groundwater sampling. The semiannual monitoring events were performed in accordance with the (1) 2019 Facility-Wide Groundwater Monitoring Work Plan (2019 FWGMWP; TRC 2019) that was submitted to the NMED and OCD in June 2019 and approved by the NMED on February 17, 2020 (NMED 2020a) and (2) the December 28, 2018, submittal letter of the "SWMU / AOC Group 3 Additional Corrective Action Investigation Report – Revision 2 (SWMU/AOC Group 3 Rev 2 transmittal letter; HFNR 2018) and NMED's subsequent response letter dated March 22, 2019 (NMED 2019a). Remedial activities conducted in 2020 consisted of recovery of PSH and impacted groundwater and periodic gauging of recovery wells. The

Released to Imaging: 11/21/2023 10:16:55 AM

groundwater monitoring and remediation activities were performed in the following refinery areas of interest:

- The closed TEL Impoundment
- The closed NCL
- The inactive EPs
- Three Mile Ditch (TMD)
- The impacted vadose zone located beneath the refinery in the following other areas:
  - Field East of Refinery
  - North Refinery
  - South Refinery
  - Reverse Osmosis (RO) Reject Fields (North and South)
  - Cross-gradient of Refinery
  - Up-gradient of Refinery

Released to Imaging: 11/21/2023 10:16:55 AM

2.0 Scope of Services

Groundwater monitoring, remedial, and other associated activities performed in 2020 are summarized in this section. The first semiannual groundwater monitoring event was conducted from June 16 to June 18, 2020. The second semiannual groundwater sampling event was conducted from October 6 to October 7, 2020. Routine remedial activities were conducted throughout 2020.

The first semiannual groundwater monitoring event was originally scheduled for the week of April 13, 2020, but was postponed due to the public health emergency and travel restrictions associated with the coronavirus disease of 2019 (COVID-19) pandemic. The event was rescheduled for the week of June 15, 2020. Appropriate notifications were made to the NMED regarding the rescheduling of activities.

2.1 Monitoring Well Installation, Maintenance, and Repairs

Eight monitoring wells (MW-53R, MW-62R, MW-137A, MW-138A, MW-145, MW-146, MW-147, and MW-148) were installed in September 2020, as detailed below. These wells were gauged and sampled (if less than 0.03 feet of PSH measured in well) during the second 2020 semiannual event and will be added to the facility-wide groundwater monitoring program in the 2021 annual update to the FWGMWP in June 2021. Boring logs and well construction details for each well are provided as Appendix A.

- MW-53R was installed on September 23, 2020 along the US Highway 285 right of way, up-gradient of the NCL. MW-53R was installed in the shallow saturated zone as a replacement for MW-53, which was likely destroyed during road construction activities. The replacement well was completed consistent with the former well. MW-53 could not be located to plug and abandon.
- MW-62R, MW-137A, and MW-138A were installed on September 1 to 4, 2020 in the north central portion of the refinery in the North Refinery Area at locations adjacent to existing wells MW-62, MW-137, and MW-138, respectively. The wells were installed in the shallow saturated zone in accordance with the *Nested Well Installation Work Plan for SWMU / AOC Group 3* (Wood 2019) dated December 30, 2019, NMED's subsequent approval with modifications letter dated April 6, 2020 (NMED 2020b), and the subsequent response to NMED comments letter dated June 25, 2020 (HFNR 2020). Well installation and development activities will be documented in a forthcoming report. MW-137A and MW-138A were not sampled during the second 2020 semiannual event due to the presence of PSH at a thickness greater than 0.03 feet.
- MW-145 through MW-148 were installed on September 22 to 24, 2020, down-gradient of the refinery, in the Field East of Refinery. The wells were installed in the shallow saturated zone in accordance with the scope of work that was submitted to the NMED and the OCD in an email on May 21, 2019 (HFNR 2019), and approved with modifications by NMED and OCD in emails on May 29, 2019 (NMED 2019b; OCD

Released to Imaging: 11/21/2023 10:16:55 AM

2019). Well installation, development, and sampling activities are documented in the February 2021 *Downgradient Groundwater Investigation Report* (TRC 2021).

The following well maintenance was performed in 2020:

- Locking J-plugs and locks were replaced on various monitoring wells as required throughout 2020.
- PSH absorbent socks were installed and maintained in various wells including MW-64, MW-65, MW-85, MW-86, MW-99, NCL-34A, KWB-4, KWB-7, KWB-8, KWB-11B, RW-17A, RW-17G, and TEL-3.

2.2 Phase-Separated Hydrocarbon and Water Level Measurements

Synoptic fluid gauging was conducted by Hydrologic Monitoring, LLC (HMI) at the beginning of each semiannual monitoring event in accordance with the 2019 FWGMWP. Wells were gauged to determine the groundwater elevation, flow direction, and gradient, the presence or absence of PSH, and apparent PSH thickness. A decontaminated oil-water interface probe was used to measure depth to PSH (if present), depth to water, and total depth in the monitoring and recovery wells. All measurements were recorded to the nearest 0.01-foot from the surveyed datum marking on each well casing. If the survey datum mark was not visible, measurements were obtained from the northern side of each well riser. Measurements were recorded on the field data sheets for each event.

The first semiannual gauging event was conducted on June 15 to 16, 2020. All wells were gauged within 48 hours in accordance with the 2019 FWGMWP. No rainfall was recorded at the refinery, or at a National Weather Service (NWS) gauging station located approximately 6 miles south of the refinery during the days on which gauging occurred. A total of 0.28 inches of rainfall was recorded at the NWS gauging station during the month of June 2020. Rainfall of 0.02 inches was recorded on June 12, 2020, three days before gauging activities; the remainder occurred after completion of gauging and sampling activities. A copy of the NWS data for June 2020 is provided in Appendix B.

The second semiannual gauging event was conducted on October 6, 2020. All wells were gauged within 48 hours in accordance with the 2019 FWGMWP. No rainfall was recorded at the refinery or the NWS gauging station during the days on which gauging occurred. A total of 0.05 inches of rainfall was recorded at the NWS gauging station during the month of October 2020, all of which occurred after completion of gauging and sampling activities. A copy of the NWS data for October 2020 is provided in Appendix B.

Results of the 2020 semiannual gauging events are summarized in Table 1. Potentiometric surface maps of the shallow saturated zone and valley fill zone are provided as Figures 4 through 7. PSH thickness maps are provided as Figures 8 and 9.

2.3 Groundwater Sample Collection and Handling

Semiannual groundwater sampling was conducted by HMI in accordance with the 2019 FWGMWP. No sample was collected from a well containing PSH with a measured thickness

Released to Imaging: 11/21/2023 10:16:55 AM

greater than or equal to (≥) 0.03 feet in accordance with the 2019 FWGMWP. The following wells were not sampled during each 2020 semiannual event due to the presence of PSH at thicknesses ≥0.03 feet:

- First semiannual event: MW-48, MW-58, MW-65, MW-67, MW-85, MW-92, MW-94, MW-97, MW-107, MW-112, MW-127, MW-128, MW-129, MW-132, MW-133, MW-137, MW-138, KWB-2R, KWB-4, KWB-5, KWB-6, KWB-8, KWB-10R, RW-1, RW-2, RW-5R, RW-6, RW-8, RW-13R, RW-14R, RW-15C, RW-19, RW-20A, RW-20B, RW-22, and TEL-3; and
- Second semiannual event: MW-48, MW-58, MW-65, MW-67, MW-85, MW-91, MW-92, MW-94, MW-99, MW-111, MW-112, MW-127, MW-128, MW-131, MW-132, MW-133, MW-137, MW-137A, MW-138, MW-138A, NCL-34A, KWB-2R, KWB-4, KWB-5, KWB-6, KWB-10R, TEL-1, and TEL-2.

Groundwater was purged and sampled from monitoring and recovery wells with a peristaltic pump and dedicated tubing or a dedicated bladder pump using low-flow methods in accordance with the NMED Hazardous Waste Bureau (HWB) Position Paper “Use of Low-Flow and Other Non-Traditional Sampling Techniques for Compliance Groundwater Monitoring” (NMED 2001). Groundwater was purged and sampled from water supply wells by attaching a decontaminated or dedicated hose barb to the available spigot. The spigot was located at a point before the water supply is introduced into any storage tanks or treatment units. The method by which each well was purged and sampled is provided in Table 2.

A multi-parameter water quality meter with flow-through cell and hand-held turbidity meter were used during the purging process of monitoring and recovery wells to monitor for field water quality parameters (pH, temperature, specific conductance, oxidation-reduction potential [ORP], dissolved oxygen [DO], and turbidity) and demonstrate stabilization. Water quality parameters were recorded approximately every three minutes during purging on a groundwater sampling form. The water quality parameters, depth to water (in non-supply wells only), and a qualitative description of the water quality (e.g., turbidity, sheen, odor) were also recorded during the purging process. Copies of the groundwater sampling forms are provided in Appendix B.

Water supply wells were purged and sampled from a sampling point (i.e., tap or spigot) located at or near the well head or pump house and before the water supply is introduced into any storage tank or treatment unit. The wells were purged at the sample point to remove any standing water from the well casing and surface piping. Grab readings of geochemical parameters including pH, temperature, conductivity, ORP, dissolved oxygen, and turbidity were also collected during the purging process.

The purging process was considered complete and groundwater sampling commenced when at least four of the purge parameters had stabilized. The specified stabilization criteria was +/- 0.2 standard unit for pH, +/- 0.2 degree Celsius for temperature, +/- 0.2 milligrams per liter (mg/L) for DO, +/- 0.02 Siemen per meter for specific conductance, and +/- 20 millivolts for ORP. The final stabilized water quality parameters measured at each well are summarized in Table 2. In addition, other observations of relative water quality (color and odor) are included in Table 2.

Released to Imaging: 11/21/2023 10:16:55 AM

Groundwater samples were collected directly from the dedicated tubing or water supply well sampling point into laboratory-provided sample containers. Care was taken to not overflow the containers and potentially remove preservatives from pre-preserved containers. Samples that were to be analyzed for dissolved metals were field-filtered by attaching a disposable 0.45 micron filter to the tubing and directing the flow through the filter into the sample container.

Sample labels were placed on each container and included the well name, sample name, date and time, sampler's initials, and analytical method(s) to be performed. Glass sample containers were placed in padded packing sleeves to prevent breakage. All samples were placed on wet ice in a shipping container. All groundwater samples collected during the 2020 semiannual events were submitted to Pace Analytical National Center for Testing & Innovation in Mount Juliet, Tennessee under appropriate chain-of-custody documentation for laboratory analyses specified in the 2019 FWGMWP. Shipping containers were sent overnight to the laboratory via Federal Express. Copies of the chain-of- custody forms are included in Appendix C with the analytical data reports.

2.4 Equipment Decontamination Procedures

The oil-water interface probes used to gauge the PSH and water levels were the only equipment that was placed within multiple wells. This equipment was decontaminated between uses at each well to prevent cross-contamination between wells. The probe and the attached measuring tape were washed in a mixture of water and non-phosphate detergent (Alconox™). The equipment was then rinsed with water. Distilled water purchased from a local store was used for washing and rinsing the equipment.

The flow-through cell and probes of the water quality meters used for low-flow purging was also decontaminated between uses at each well. Decontamination of this equipment included submersing the flow-through cell in a mixture of water and non-phosphate detergent (Alconox™), washing the cell with a soft brush, submersing the probe end of the meters in the soapy water mixture, and brushing the end of the probe with a soft brush. The equipment was then rinsed with distilled water purchased from a local store.

Dedicated tubing was used for sample collection from each well; therefore, decontamination of sample collection tubing was not required. The dedicated tubing was left in the well between sampling events, with the upper portion coiled to ensure that the lower portion did not remain in the water column. At the beginning of each sampling event, the tubing was inspected and replaced if staining or mold was observed.

2.5 Investigation-Derived Waste

All purge water and decontamination liquids were temporarily contained. The liquids were disposed daily in the refinery process wastewater system upstream of the oil/water separator. The volumes of purge water collected at each well were recorded on the HMI groundwater sampling forms and copies of these forms are provided in Appendix B.

Released to Imaging: 11/21/2023 10:16:55 AM

Solid wastes generated during sampling activities included disposable gloves, paper towels, plastic bags, and tubing. All solid waste was contained in plastic bags and placed in the refinery trash receptacles for later disposal.

2.6 Exceptions to Groundwater Monitoring Work Plan

The following exceptions to the 2019 FWGMWP occurred during the first semiannual monitoring event conducted from June 16 to June 18, 2020:

- The sampling event occurred in June 2020 instead of April 2020 due to the public health emergency and travel restrictions associated with the coronavirus disease of 2019 (COVID-19) pandemic.
- Wells KWB-3AR and KWB-9 were not gauged or sampled, and well RA-1227 was not sampled because access was denied by the landowner. The landowner has not granted HFNR access to these wells since 2011, but HFNR continues to pursue access.
- Well RW-11 was not sampled because it was dry.
- Well MW-53 was not gauged or sampled because it could not be located (likely destroyed during road construction/landscaping activities).

The following exception to the 2019 FWGMWP occurred during the second semiannual monitoring event conducted from October 6 to October 7, 2020:

- Wells KWB-3AR was not gauged or sampled and KWB-9 was not gauged because access was denied by the landowner. The landowner has not granted HFNR access to these wells since 2011.
- Replacement well MW-53R was gauged and sampled instead of MW-53.
- Well RW-20A was not gauged because a pump installed in the well prevented measurement.
- Well MW-97 was not gauged or sampled because it could not be located due to construction in the area.

Released to Imaging: 11/21/2023 10:16:55 AM

3.0 Regulatory Criteria

Regulatory standards or screening levels used to evaluate the data collected for the groundwater monitoring program are based on the presumption that the shallow groundwater might be used as a source of drinking water. Use of these screening levels are conservative because the shallow groundwater is not a documented source of drinking water. The Critical Groundwater Screening Level (CGWSL) used for each constituent of concern (COC) is the lower value of either the New Mexico Water Quality Control Commission (WQCC) standard from 20.6.2.3103 NMAC (last updated in December 2018) or the Maximum Contaminant Level (MCL) from the United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) (USEPA 2020). For COCs where neither a WQCC standard or MCL exists, the CGWSL is the NMED Groundwater Screening Level listed in the NMED Risk Assessment Guidance for Investigations and Remediation updated in February 2019 and revised in June 2019 (NMED 2019c). If no NMED Groundwater Screening Level value is available, then the CGWSL is the USEPA Tap Water RSL value (USEPA 2020).

Available regulatory screening levels and the applicable CGWSL for each COC is presented in Table 3. The CGWSL for each COC is also provided for comparison in the analytical data summary tables, as discussed later in this report.

The 2020 TPH diesel range organics (DRO) groundwater data, in all areas except the EPs, was screened against the groundwater screening level for “unknown oil” included in Table 6-4 of the 2019 guidance document (NMED 2019c). The 2020 TPH DRO groundwater data for the EPs was screened against the groundwater screening level for “Diesel #2/New Crankcase Oil” in Table 6-4 of the 2019 NMED guidance document, consistent with the approved investigation report for the EPs (Arcadis 2015a). The 2020 TPH gasoline range organics (GRO) groundwater data was screened against the screening value for “gasoline,” established in 2019, on Table 6-4 of the 2019 NMED guidance document (NMED 2019c).

An evaluation of background (or baseline) groundwater quality was conducted between July 2014 and June 2015 for the purpose of determining the concentrations of COCs that may be present hydraulically up- and cross-gradient of refinery operations. The evaluation was performed according to an approved work plan (Arcadis 2014) and a report summarizing the evaluation was submitted to NMED and OCD in September 2015 (Arcadis 2015b). The background groundwater investigation included statistical evaluation of COCs and calculation of upper tolerance limits, where a statistically valid set of data was available. HFNR requested to use the background groundwater evaluation to develop alternative screening standards for specific COCs where the background data set demonstrates that the COCs are present above the WQCC standards or MCLs. Alternative standards development is pending further discussion and approval from OCD and NMED and so they are not included in this report. However, it should be noted that concentrations of manganese, chloride, fluoride, sulfate, nitrate/nitrite, and TDS that exceed the screening levels using the WQCC standards or USEPA MCLs may not exceed up-gradient concentrations.

Released to Imaging: 11/21/2023 10:16:55 AM

4.0 Monitoring Results

Results of the 2020 semiannual groundwater monitoring events are summarized in this section.

4.1 Groundwater Gauging Results

Well gauging was conducted from June 15 and 16, 2020, and on October 6, 2020. Depth to water measurements, depth to PSH (if present) measurements, and groundwater elevations are presented in Table 1. For wells with PSH present, the groundwater elevation was corrected for the presence of PSH (with a specific gravity of 0.8). Groundwater potentiometric surface maps based on the 2020 semiannual gauging results for the shallow saturated zone and the valley fill zone are presented in Figures 4 through 7.

The 2020 gauging results indicate groundwater predominantly flows eastward beneath the refinery towards the Pecos River, with localized variations in both the shallow saturated zone and the valley fill zone. The groundwater flow direction beneath the EPs is generally to the southeast. The 2020 gauging results are consistent with historical results. Groundwater mounding was observed around wells MW-114 and MW-115 during both semiannual gauging events, despite cessation of discharge of RO reject water to the RO Reject Fields in January 2019. Localized groundwater sinks were observed around various recovery wells during both semiannual gauging events due to active groundwater pumping at those recovery wells.

4.2 Phase-Separated Hydrocarbons

The presence of PSH and measured apparent in-well PSH thicknesses are shown on Figures 8 and 9 for the 2020 first and second semiannual events, respectively. Consistent with previous results, PSH is present in four general areas at the refinery: isolated wells in the north portion of the refinery (North Refinery Area, NCL, and the TEL Surface Impoundment), isolated wells in the southwestern portion of the refinery (South Refinery Area), in a segmented area across multiple wells in the southeastern portion of the refinery (South Refinery Area) extending east through the field owned by HFNR east of the refinery (Field East of Refinery) and Bolton Road, and one isolated area on the western end of the EPs near the former discharge point into Pond 1.

Plots presenting apparent in-well PSH thicknesses and groundwater elevations over time for wells that have historically contained measurable PSH are provided in Appendix D. PSH thicknesses across all areas of interest are generally stable to declining over time. PSH thicknesses generally appear to be inversely affected by fluctuations in groundwater elevations and any recent increases in PSH thicknesses are attributed to reductions in groundwater elevations. Groundwater elevations generally decreased across the facility over the last eight sampling events (April 2017, October 2017, April 2018, October 2018, April 2019, October 2019, June 2020, and October 2020). Groundwater elevation in many wells was measured at a historical minimum in 2020. The reduction in groundwater elevations from 2017 through 2020 is consistent with the occurrence of drought conditions across New Mexico during this time. Apparent in-well PSH thickness fluctuates with the water table because it relates to the

Released to Imaging: 11/21/2023 10:16:55 AM

hydrogeologic conditions and characteristics of the PSH and soil and is therefore a poor indicator of PSH mobility and recoverability.

The presence of PSH within each area of interest is discussed in the following subsections. PSH recovery activities and results are provided in Section 6.0.

4.2.1 North Colony Landfarm – PSH Gauging Results

PSH was detected in NCL well NCL-34A in October 2020 at an estimated thickness of greater than 4.25 feet – the PSH thickness could not be measured because groundwater was not measured above the total depth of the well. PSH was last measured in NCL-34A from March 2011 through March 2013 (at a historical maximum of 5.87 feet in September 2011). PSH presence and thickness in this well directly correlates with reductions in the groundwater elevation observed during these times. The October 2020 groundwater elevation (i.e., below the well total depth) is the historical minimum observed in this well.

4.2.2 Tetra Ethyl Lead Surface Impoundment – PSH Gauging Results

PSH was measured in well TEL-3 at a thickness of 0.06 feet in June 2020. In October 2020, PSH was measured in wells TEL-1 and TEL-2 at thicknesses of 0.66 and 0.38 feet, respectively. PSH was last measured in TEL-1 in 2010. PSH has intermittently been present in TEL-2 since 2007 and TEL-3 since 2008. PSH presence in these wells correlates with reductions in groundwater elevations during those corresponding monitoring periods. The PSH thicknesses measured in in TEL-1, TEL-2, and TEL-3 in 2020 are historical maximums and groundwater elevations have decreased over 11 feet in these wells since at least April 2017 to historical minimums in October 2020.

4.2.3 Evaporation Ponds – PSH Gauging Results

PSH was measured in EP well MW-85 at thicknesses of 0.13 feet in June 2020 and 0.57 feet in October 2020. PSH was historically present in EP well MW-86 but was not measured in MW-86 during either 2020 semiannual event. These wells are located near the original discharge point in EP 1 (Pond 1). PSH thicknesses in MW-85 have overall decreased since 2012, despite PSH thickness fluctuations between the gauging events attributable to fluctuations in groundwater elevations.

4.2.4 Three Mile Ditch – PSH Gauging Results

No measurable PSH was present in any wells along the TMD during either 2020 semiannual event.

4.2.5 North Refinery Area – PSH Gauging Results

PSH was measured in wells MW-67, MW-92, MW-94, MW-97, MW-137, MW-138, RW-1, RW-2, and RW-8 in June 2020 at thicknesses ranging from 0.05 feet in MW-67 to 3.87 feet in MW-94. In October 2020, PSH was measured in MW-67, MW-91, MW-92, MW-93, MW-94, MW-137, MW-137A, MW-138, MW-138A, RW-1, RW-2, RW-7, and RW-8 at thicknesses ranging from

Released to Imaging: 11/21/2023 10:16:55 AM

0.04 feet in MW-91 and MW-93, to 5.51 feet in MW-94. PSH thicknesses have generally decreased over time in these wells, except in wells MW-92, MW-93, MW-137, and MW-138 RW-1, and RW-8, which reached historical maximums in 2020. These increased thicknesses are attributed to decreasing groundwater elevations and are not indicative of a new release or PSH migration, as follows:

- PSH thicknesses in wells MW-92, MW-137, and MW-138 increased over each monitoring event conducted since April 2019 to historical maximums of 3.01 feet, 1.56 feet, and 3.07 feet, respectively, in October 2020. Groundwater elevations measured in these wells decreased 6.15 feet, 9.52 feet, and 8.67 feet, respectively, from historical maximums in October 2015 to October 2020.
- PSH was detected for the first time at a measurable thickness (0.04 feet) in MW-93 in October 2020. The presence of measurable PSH in MW-93 in October 2020 is attributed to decreasing groundwater elevations and is not indicative of a new release or PSH migration. Groundwater elevations measured at this well decreased 6.94 feet from a historical maximum in October 2015 to October 2020.
- PSH thicknesses in wells RW-1 and RW-8 increased in 2020 to historical maximums in June 2020 and October 2020, respectively. PSH was detected at a historical maximum of 0.71 feet in RW-1 in June 2020 and 3.55 feet in RW-8 in October 2020. Groundwater elevations measured at these wells decreased 9.78 feet and 10.54 feet, respectively, from historical maximums in October 2015 to October 2020. Active pumping in these wells also contributed to the observed decreases in groundwater elevation and increases in apparent thickness in these wells.

PSH and groundwater are routinely removed from this plume by automated pumping from RW-1R, RW-2R, RW-7R, and/or RW-8R. Measurable volumes of PSH (as measured by the automated recovery system) were recovered from all these recovery wells (see Section 6.0 and Table 5 for details). The recovered PSH is pumped to Tank 49 within the refinery and then to crude tanks for processing.

4.2.6 South Refinery Area – PSH Gauging Results

PSH was measured in wells KWB-2R, KWB-4, KWB-5, KWB-6, MW-48, MW-64, MW-65, MW-107, RW-5R, RW-6, RW-15C, and RW-19 in June 2020 at thicknesses ranging from 0.01 feet in MW-64 to 2.56 feet in KWB-6. In October 2020, PSH was measured in wells KWB-2R, KWB-4, KWB-5, KWB-6, MW-48, MW-65, MW-99, MW-107, RW-5R, RW-6, RW-15C, and RW-19 at thicknesses ranging from 0.04 feet at RW-15C to 3.74 feet at RW-6.

PSH thicknesses have generally decreased over time in most of these wells, except for recent increases in wells KWB-4, KWB-5, KWB-6, MW-99, MW-107, and RW-6. These increased thicknesses are attributed to recent reductions in groundwater elevations or the combined influence of the active recovery system and are not indicative of a new release or PSH migration, as follows:

Released to Imaging: 11/21/2023 10:16:55 AM

- PSH thicknesses in KWB-4. KWB-5, and KWB-6 have overall increased during monitoring events conducted since April 2017, April 2019, and April 2018, respectively. The PSH thicknesses measured in these wells in 2020 are less than the historical maximums. The recent increase in PSH thicknesses in these wells is attributed to reductions in groundwater over the same time.
- Measurable PSH was detected in MW-99 in October 2020 for the first time since March 2014. The October 2020 PSH measurement was a historical maximum of 1.06 feet. Groundwater elevations in MW-99 decreased 6.76 feet from a historical maximum in October 2015 to a historical minimum in October 2020.
- PSH was detected for the first time in MW-107 at a measurable thickness of 1.92 feet in June 2020, and again at a thickness of 1.33 in October 2020. The presence of measurable PSH in MW-107 in 2020 is attributed to decreasing groundwater elevations and is not indicative of a new release or PSH migration. Groundwater elevations in this well have decreased significantly from a historical maximum in October 2015 to a historical minimum in October 2020, as shown in the PSH thickness plots provided in Appendix D. Groundwater elevations decreased 8.02 feet from October 2015 to June 2020; and 8.83 feet from October 2015 to October 2020.
- PSH thicknesses in recovery well RW-6 have overall increased since April 2019, with measured thicknesses of 2.52 feet and 3.74 feet in June 2020 and October 2020, respectively. The 2020 PSH thicknesses were less than the historical maximum of 3.83 feet measured in October 2019. Groundwater elevations in RW-6 have decreased 5.57 feet between a historical maximum in October 2016 to October 2020. The groundwater elevation measured in June 2020 was a historical minimum, but this measurement was likely affected by pumping in the well prior to the gauging event.

PSH and groundwater is routinely removed from this plume by automated pumping from RW-4R, RW-5R, RW-6R, RW-15 (RW-15 recovery trench wells A, B, D, and/or E), and/or RW-19. Measurable volumes of PSH (as measured by the automated recovery system) were recovered from recovery wells RW-5R and RW-6R in 2020 (see Section 6.0 and Table 5 for details). The recovered PSH is pumped to Tank 49 within the refinery and then to crude tanks for processing.

4.2.7 Field East of Refinery – PSH Gauging Results

PSH was measured in wells KWB-8, KWB-10R, MW-58, MW-112, MW-127, MW-128, MW-129, MW-132, MW-133, RW-13R, RW-14R, RW-20A, RW-20B, and RW-22 in June 2020, with thicknesses ranging from 0.09 feet in KWB-8 to 6.26 feet in RW-14R. In October 2020, PSH was measured in wells KWB-10R, MW-58, MW-111, MW-112, MW-127, MW-128, MW-129, MW-131, MW-132, MW-133, RW-13R, RW-14R, RW-20B, and RW-22. PSH was likely present in RW-20A in October 2020, but fluid levels in this recovery well could not be measured because they were below the recovery pump within this recovery well. PSH thicknesses in October 2020 ranged from 0.11 feet in RW-13R to 2.99 feet in KWB-10R.

PSH thicknesses have generally decreased over time in most of these wells, except for recent increases in wells KWB-10R, MW-58, MW-111, MW-127, MW-128, MW-129, MW-131, and RW-

Released to Imaging: 11/21/2023 10:16:55 AM

22. These increases are attributed to recent reductions in groundwater elevations or the combined influence of the active recovery system, and are not indicative of a new release or PSH migration, as follows:

- PSH thicknesses have increased during each monitoring event conducted since October 2018 in well KWB-10R, April 2019 in wells MW-127 and MW-128, and October 2019 in wells MW-58 and MW-129. The October 2020 PSH measurements in these wells are historical maximums: 2.99 feet in KWB-10R, 0.95 feet in MW-58, 1.92 feet in MW-127, 2.14 feet in MW-128, and 1.09 feet in MW-129. Groundwater elevations in these wells have decreased between 5.37 feet in MW-129 and 9.43 feet in MW-127from historical maximums in November 2014 to historical minimums in October 2020.
- PSH was detected for the first time in MW-111 at a measurable thickness (0.25 feet) in October 2020. The presence of measurable PSH in MW-111 in October 2020 is attributed to decreasing groundwater elevations and is not indicative of a new release or PSH migration. Groundwater elevations measured at this well decreased 7.55 feet from a historical maximum in November 2014 to the historical minimum in October 2020.
- PSH thicknesses in MW-131 increased to a historical maximum of 1.63 feet in October 2020. Groundwater elevations in MW-131 decreased 7.32 feet from a historical maximum in November 2014 to a historical minimum in October 2020.
- PSH thicknesses increased in recovery well RW-22 to a historical maximum of 5.69 feet in June 2020 but decreased to 0.88 feet in October 2020. Groundwater elevations and PSH thicknesses in this well have historically fluctuated between gauging events and is affected by recovery system pumping. Despite seasonal fluctuations, groundwater elevations in RW-22 have decreased 8.35 feet from a historical maximum in November 2014 to October 2020.

PSH thicknesses fluctuate in the wells with active PSH recovery and wells located nearby. PSH and groundwater is routinely removed from this plume by automated pumping from RW-12R, RW-13R, RW-14R, RW-20, and/or RW-22. Measurable volumes of PSH (as measured by the automated recovery system) were recovered from wells RW-13R, RW-14R, and RW-22 in 2020. The recovered PSH is pumped to Tank 49 within the refinery and then to crude tanks for processing.

4.2.8 Cross-Gradient and Up-Gradient Areas – PSH Gauging Results

No measurable PSH was present in any wells located up-gradient or cross-gradient of the refinery during either 2020 semiannual event. The up-gradient wells are only gauged on an annual basis.

4.2.9 RO Reject Fields – PSH Gauging Results

No measurable PSH was present in any wells located within the North or South RO Reject Fields during either 2020 semiannual event.

Released to Imaging: 11/21/2023 10:16:55 AM

5.0 Chemical Analytical Data

The chemical laboratory analyses and results of groundwater samples collected at the refinery in 2020 are summarized in this section.

5.1 Sample Laboratory Analyses

Groundwater samples collected during the 2020 semiannual sampling events were submitted for laboratory analysis of one or more of the following COCs by the associated analytical methods in accordance with the 2019 FWGMWP:

- TPH DRO by Method 8015 Modified
- TPH GRO by Method 8015 Modified
- Volatile organic compounds (VOCs) by Method 8260
- Metals by Methods 6010/6020 or 7470 (arsenic, barium, chromium, iron, lead, manganese, and selenium in all wells that were analyzed for metals; boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium were additionally analyzed in select wells)
  - Total metals were analyzed during both the first and second semiannual events
  - Dissolved metals were analyzed during the first semiannual event (for the same list of metals as the total metal list)
- Cyanide by Method 4500
- Major cations and anions by Methods 6020 or 300 (calcium, chloride, fluoride, potassium, sodium, and sulfate)
- Nitrates/nitrites (as nitrogen) by Method 300
- Total dissolved solids (TDS) by Method 2540

The specific analytical suite for each groundwater sample was in accordance with Table 1 of the approved 2019 FWGMWP. Laboratory analytical reports are provided in Appendix C.

In accordance with the SWMU/AOC Group 3 Rev 2 transmittal letter dated December 28, 2018, and NMED's subsequent response letter dated March 22, 2019, groundwater samples collected from select wells in the vicinity of solid waste management units (SWMUs) 20 and 22 (North Refinery wells) were analyzed for semi-volatile organic chemicals (SVOCs) by EPA Method 8270. One well (KWB-6) with historical detections of 1,2-dichloroethane was scheduled be analyzed for EDB by EPA Method 8011; however, PSH at a thickness ≥0.03 feet was measured in this well during both 2020 semiannual events and no groundwater samples were collected.

Released to Imaging: 11/21/2023 10:16:55 AM

5.2 Data Validation

Laboratory analytical results were reviewed and validated following the guidelines of the PCC Permit. The data validation and a discussion of any data quality exceptions are provided in Appendix E. Data qualifier flags were added to the data based on the data validation results and are summarized in tabulated form in Appendix C.

Although some data quality exceptions were noted, the analytical results are generally usable for the intended purpose.

5.3 Laboratory Analytical Results

Laboratory analytical results of all wells sampled in 2020, and during at least the three previous sampling events, are summarized in Tables 4A through 4D, as follows:

- Table 4A – GRO, DRO, and select VOCs (VOCs detected above the CGWSL in more than one well in 2020)
- Table 4B – Total Metals
- Table 4C – Water quality parameters (TDS, nitrate/nitrite, major cations, major anions) and Cyanide
- Table 4D – SVOCs (detected in at least one well in either 2019 or 2020)

Analytical results of the 2020 monitoring events and the three prior sampling events are included in the tables as required by the PCC Permit. The timeframe required to provide data for the three prior sampling events varies by well because wells are sampled semiannually, annually, or biennially. Wells that are sampled on a biennial basis are sampled during odd calendar years and therefore were not sampled during April 2020. For consistency of the timeframe summarized in the analytical results tables, no data prior to 2013 is included for the wells that are sampled biennially or were not sampled during this timeframe for whatever reason (e.g., PSH present at a thickness ≥0.03 feet, lack of well access, etc.). Analytical results in Tables 4A through 4D are organized by the major area of interest in which each well is located. The applicable CGWSL is provided at the top of each data table and exceedances of the CGWSL are highlighted in yellow. Analytical results of all detected COCs are summarized in tables organized by well in numeric order that are included in Appendix C.

Plots of historical concentrations of target COCs are provided in Appendix D for wells with historical exceedances of CGWSLs. These plots are organized by well within major areas of interest and include concentration plots for the following target COCs: GRO, DRO, benzene, ethylbenzene, toluene, total xylenes, methyl tert-butyl ether (MTBE), naphthalene, and arsenic.

Figures 10 through 19 present the extent of the CGWSL exceedance areas of the following target COCs for both the first and second semiannual 2020 sampling events: DRO, arsenic, benzene, naphthalene, and MTBE.

Released to Imaging: 11/21/2023 10:16:55 AM

Figures 20 through 29 depict the extent of CGWSL exceedance areas of the following water quality parameters for both the first and second semiannual 2020 events in accordance with the Discharge Permit requirements: chloride, fluoride, sulfate, nitrate/nitrite, and TDS.

The 2020 analytical results in each major area of interest are summarized in the following subsections.

5.3.1 North Colony Landfarm – Analytical Results

Groundwater monitoring is ongoing beneath and near the closed NCL. Groundwater samples were collected from the NCL wells listed below during the 2020 semiannual sampling events:

- First Semiannual Event (12 wells): MW-18, MW-45, MW-54A, MW-55, MW-56, MW-108, NCL-31, NCL-32, NCL-33, NCL-34A, NCL-44, and NCL-49.
- Second Semiannual Event (10 wells): MW-45, MW-53R, MW-54A, MW-55, MW-108, NCL-31, NCL-32, NCL-33, NCL-44, and NCL-49.

Groundwater samples collected from these NCL area wells were analyzed for DRO, VOCs, the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium), and water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite). In addition, the groundwater sample collected from MW-55 was analyzed for GRO and groundwater samples from MW-18, MW-45, and MW-55 were analyzed for cyanide and the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium).

Analytical results of groundwater samples collected from wells located in and near the NCL in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, NCL

In 2020, groundwater samples were collected from wells located in and near the NCL for analysis of TPH DRO and GRO. TPH results that exceeded their respective CGWSL in NCL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
NCL	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	12	12	7.21 (NCL-33)
	TPH-GRO	**0.0101**	1	1	0.140 (MW-55)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	10	9	8.54 (NCL-33)
	TPH-GRO	**0.0101**	1	1	0.635 (MW-55)

Released to Imaging: 11/21/2023 10:16:55 AM

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in NCL area wells sampled during both 2020 semiannual events.

As shown in the COC concentration plots included in Appendix D, DRO concentrations in NCL wells MW-18, MW-45, MW-53, MW-54A, MW-56, MW-108, NCL-31, NCL-32, NCL-33, NCL-34A, and NCL-44 have overall increased since 2011, but have exhibited a stable to decreasing trend over at least the four most recent sampling events. DRO concentrations in these wells will be reviewed again in 2021.

DRO concentrations at well MW-55 overall increased since 2011 but were stable from October 2018 through June 2020. DRO concentrations at MW-55 increased from 0.95 mg/L in June 2020 to 1.34 mg/L in October 2020, which is the historical maximum for this well. DRO concentrations in this well will be reviewed again in 2021.

GRO concentrations in MW-55 have exhibited an overall increasing trend since April 2017, with a historical maximum concentration of 0.635 mg/L reported in October 2020. GRO concentrations in this well will be reviewed again in 2021.

Volatile Organic Compounds, NCL

In 2020, groundwater samples were collected from wells located in and near the NCL for analysis of VOCs. VOC results that exceeded their respective CGWSL in NCL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
NCL	*First Semiannual Event (June 2020)*				
	Benzene	**0.00500**	12	2	1.10 (NCL-34A)
	MTBE	**0.100**	12	1	0.228 (MW-55)
	Second Semiannual Event (October 2020)				
	Benzene	**0.00500**	10	1	0.100 (MW-108)
	MTBE	**0.100**	10	1	0.299 (MW-55)

As summarized above and highlighted in Table 4A, benzene and MTBE were detected in exceedance of their respective CGWSLs in NCL area wells during at least one 2020 sampling event. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 VOC results in groundwater beneath and near the NCL were generally consistent with historical results, with exceptions listed below. As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in wells located in and near the NCL are overall stable to declining, except MTBE in wells MW-45 and MW-55 as discussed below. MTBE concentrations in these wells will be reviewed again in 2021.

- MTBE concentrations in MW-45 have exhibited an increasing trend since April 2016 but remain well below the CGWSL of 0.100 mg/L. MTBE concentrations in MW-45 increased to 0.0124 mg/L in October 2020, which is the historical maximum for this well.

Released to Imaging: 11/21/2023 10:16:55 AM

- MTBE concentrations in MW-55 have exhibited an increasing trend since April 2015 and have exceeded the CGWSL since the second 2019 semiannual event. MTBE concentrations increased from 0.106 mg/L in October 2019 to 0.228 mg/L in June 2020 to 0.299 mg/L, which is the historical maximum for this well.

Wells MW-45 and MW-55 are located approximately 1,480 feet and 550 feet, respectively, down-gradient of the NCL. MTBE concentrations in wells located in the immediate vicinity of the NCL remain stable and below the CGWSL, including wells NCL-33 and NCL-34A which are located on the down-gradient boundary of the NCL. Therefore, the presence of MTBE in wells MW-45 and MW-55 is not associated with the NCL.

Total Metals, NCL

Groundwater samples were collected from wells located in and near the NCL for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium). In addition, groundwater samples collected from wells MW-18, MW-45, and MW-55 were analyzed for the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium). Total metal results that exceeded their respective CGWSL in NCL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
NCL	*First Semiannual Event (June 2020)*				
	Arsenic	**0.0100**	12	2	0.0305 (NCL-44)
	Boron	**0.750**	3	2	2.52 (MW-18)
	Iron	**1.00**	12	4	3.52 (NCL-33)
	Manganese	**0.200**	12	6	2.24 (NCL-31)
	Uranium	**0.0300**	3	2	0.0549 (MW-55)
	Second Semiannual Event (October 2020)				
	Arsenic	**0.0100**	10	2	0.0211 (NCL-44)
	Iron	**1.00**	10	2	4.03 (NCL-33)
	Manganese	**0.200**	10	6	2.15 (NCL-31)
	Uranium	**0.0300**	2	1	0.0364 (MW-55)

As summarized above and highlighted in Table 4B, arsenic, boron, iron, manganese, and uranium were detected in exceedance of their respective CGWSLs in NCL wells during at least one 2020 sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The total metal results in groundwater beneath and near the NCL were generally consistent with or less than historical results, except uranium in MW-18. Uranium concentrations in MW-18 increased from 0.0283 mg/L in April 2019 to 0.0451 mg/L in June 2020. Uranium has fluctuated above and below the CGWSL of 0.0300 mg/L in this well over time. Concentrations of target COC arsenic in wells located in and near the NCL are overall stable to declining, as shown in the COC concentration plots included in Appendix D.

Released to Imaging: 11/21/2023 10:16:55 AM

Cyanide, NCL

Groundwater samples collected from wells MW-18 during the first 2020 semiannual event and MW-45 and MW-55 during both 2020 semiannual events were analyzed for cyanide. Cyanide was detected above the method detection limit, at a J-flagged (estimated concentration) of 0.00225 J mg/L, in well MW-45 in June 2020, but the concentration was below the method detection limit in October 2020. Cyanide was not detected above the above the CGWSL of 0.200 mg/L in groundwater samples collected from any NCL well during the June 2020 or October 2020 sampling events.

Water Quality Parameters, NCL

In 2020, groundwater samples were collected from wells located in and near the NCL for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]).

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from various wells in and near the NCL, as highlighted in Table 4C. The reported concentrations of these constituents generally exhibit an overall stable trend across the NCL, with some seasonal fluctuations between the first and second semiannual events. Nitrate/nitrite concentrations in NCL-49 have increased over the four most recent sampling events from 3.59 mg/L in October 2018 to 10.1 mg/L in October 2020, which is slightly above the CGWSL of 10.0 mg/L. Nitrate/nitrite concentrations in this well will be reviewed again in 2021.

5.3.2 Tetra Ethyl Lead Surface Impoundment – Analytical Results

Groundwater monitoring beneath the closed TEL surface impoundment is ongoing. Groundwater samples were collected from the following wells during 2020 semiannual events:

- First Semiannual Event (4 wells): MW-49, TEL-1, TEL-2, and TEL-4
- Second Semiannual Event (3 wells): MW-49, TEL-3, and TEL-4.

Groundwater samples collected from these TEL area wells were analyzed for GRO, DRO, VOCs, the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium), and water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite). In addition, groundwater samples collected from MW-49 were analyzed for the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium) and cyanide.

Analytical results of groundwater samples collected from TEL wells in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Released to Imaging: 11/21/2023 10:16:55 AM

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, TEL

In 2020, groundwater samples were collected from wells located in and near the TEL for analysis of TPH DRO and GRO. TPH results that exceeded their respective CGWSL in TEL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TEL	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	4	4	8.16 (TEL-2)
	TPH-GRO	**0.0101**	4	4	5.45 (MW-49)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	3	3	6.36 (TEL-3)
	TPH-GRO	**0.0101**	3	3	5.05 (MW-49)

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in all TEL area wells sampled during both 2020 semiannual events.

DRO and GRO concentrations in all TEL area wells have exhibited a stable trend over at least the four most recent sampling events with occasional fluctuations, as shown in the COC concentration plots included in Appendix D.

Volatile Organic Compounds, TEL

In 2020, groundwater samples were collected from wells located in and near the TEL for analysis of VOCs. VOC results that exceeded their respective CGWSL in TEL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TEL	*First Semiannual Event (June 2020)*				
	Benzene	**0.00500**	4	3	0.600 (MW-49)
	1,2,4-TMB	**0.0560**	4	1	0.115 (MW-49)
	MTBE	**0.100**	4	1	0.148 (MW-49)
	Second Semiannual Event (October 2020)				
	Benzene	**0.00500**	3	2	0.404 (MW-49)
	1,2,4-TMB	**0.0560**	3	2	0.0763 (MW-49)
	MTBE	**0.100**	3	1	0.196 (MW-49)

As summarized above and highlighted in Table 4A, benzene, 1,2,4-trimethylbenzene (1,2,4-TMB), and MTBE were detected in exceedance of their respective CGWSLs in TEL wells during both 2020 sampling events. No other VOC was detected above its respective CGWSL during either semiannual event.

Released to Imaging: 11/21/2023 10:16:55 AM

The 2020 VOC results of groundwater in TEL area wells were consistent with historical results. As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in TEL area wells exhibited stable trends over time despite occasional fluctuations, with the following exceptions:

- MTBE concentrations have overall increased in MW-49 since 2013 after declining between 2009 and 2013. MTBE in this well appeared to be stabilizing between April 2009 and June 2020 (ranging from 0.138 mg/L to 0.160 mg/L) at levels similar to the 2013 maximum (0.160 mg/L), but increased slightly to a historical maximum of 0.196 mg/L in October 2020. MTBE concentrations in MW-49 will be reviewed again in 2021.
- Total xylenes concentrations in TEL-3 increased from 0.0142 mg/L in October 2019 to 0.0505 mg/L in October 2020, which is the historical maximum in this well. However, concentrations in this well remain below the total xylenes CGWSL of 0.620 mg/L. Total xylenes concentrations in this well have fluctuated over time and will be review again in 2021.

Total Metals, TEL

Groundwater samples were collected from wells located in and near the TEL for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium). In addition, groundwater sample collected from MW-49 were analyzed for the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium). Total metal results that exceeded their respective CGWSL in TEL wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TEL	*First Semiannual Event (June 2020)*				
	Arsenic	**0.0100**	4	1	0.0120 (TEL-1)
	Chromium	**0.0500**	4	1	0.125 (TEL-4)
	Manganese	**0.200**	4	1	1.19 (TEL-4 FD)
	Second Semiannual Event (October 2020)				
	Chromium	**0.0500**	3	1	0.106 (TEL-4)
	Manganese	**0.200**	3	2	1.24 V (TEL-4)

FD: Field Duplicate
V: The sample concentration is too high to evaluate accurate spike recoveries.

As summarized above and highlighted in Table 4B, chromium, and manganese were detected in exceedance of their respective CGWSLs in TEL wells during both 2020 sampling events. Arsenic was detected above its CGWSL in one TEL well during the first 2020 semiannual sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 total metal results in TEL wells were generally consistent with historical results. Groundwater concentrations of target COC arsenic in TEL area wells are overall stable to declining, despite occasional fluctuations, as shown in the COC concentration plots included in Appendix D. Arsenic concentrations in TEL-1 overall increased since 2015, but concentrations

Released to Imaging: 11/21/2023 10:16:55 AM

remain below historical maximum concentrations for this well, and concentrations have been stable over the six most recent sampling events.

Cyanide, TEL

Groundwater samples collected from MW-49 during both 2020 semiannual events were analyzed for cyanide. In October 2020, cyanide was detected below the CGWSL of 0.200 mg/L, at an estimated concentration of 0.0121 J mg/L, for the first time since at least April 2018. Concentrations of cyanide will be reviewed again in 2021.

Water Quality Parameters, TEL

Chloride, fluoride, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from various TEL area wells, as highlighted in Table 4C. The reported concentrations of these constituents in 2020 were overall consistent with historical results. Nitrate/nitrite was not detected above the CGWSL in any TEL area well, which is consistent with historical results. No CGWSLs are applicable for calcium, potassium, or sodium. Analytical results of these analytes in all TEL area wells were consistent with historical results.

5.3.3 Evaporation Ponds Analytical – Results

Groundwater monitoring is ongoing beneath the inactive EPs. Analytical results of groundwater samples collected from EP wells in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, EPs

In 2020, groundwater samples were collected from the following EP wells during each semiannual event for analysis of DRO and GRO, unless noted otherwise:

- First Semiannual Event (42 wells): MW-1R (DRO only), MW-2A, MW-3, MW-4A, MW-5A, MW-6A, MW-7A, MW-10, MW-11A, MW-15, MW-18A (DRO only), MW-22A, MW-70, MW-72, MW-73, MW-74, MW-75, MW-76, MW-77, MW-78, MW-79, MW-80, MW-81, MW-82, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.
- Second Semiannual Event (31 wells): MW-2A, MW-3, MW-4A, MW-5A, MW-7A, MW-10, MW-18A (DRO only), MW-22A, MW-70, MW-74, MW-75, MW-76, MW-79, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.

Released to Imaging: 11/21/2023 10:16:55 AM

TPH results that exceeded their respective CGWSL in EP wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Evaporation Ponds	*First Semiannual Event (June 2020)*				
	TPH-GRO	**0.0101**	40	28	2.88 J (MW-77)
	TPH-DRO-EP	**0.0167**	42	33	93.9 (MW-86)
	Second Semiannual Event (October 2020)				
	TPH-GRO	**0.0101**	30	23	4.06 JB (MW-3)
	TPH-DRO-EP	**0.0167**	31	31	80.2 (MW-86)

J: Indicates an estimated value
B: Analyte was also detected in the associated method blank.

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in EP wells sampled during both 2020 semiannual events.

As shown in the COC concentration plots included in Appendix D, DRO and GRO concentrations in EP wells are overall stable over time despite occasional fluctuations, with the following exceptions:

- DRO concentrations in EP wells MW-3, MW-4A, MW-5B, MW-5C, MW-6A, MW-6B, MW-18A, MW-18B, MW-22B, MW-73 through MW-78, MW-80 through MW-84, OCD-7AR, and OCD-8A have exhibited an overall increasing trend since approximately 2011. However, DRO concentrations have exhibited a stable to decreasing trend over the four to twelve most recent sampling events in these wells. DRO concentrations in these wells will be reviewed again in 2021.
- DRO and GRO concentrations have been overall increasing in OCD-5 since October 2016. GRO concentrations increased from 0.912 mg/L in October 2019 to 1.09 mg/L in June 2020, which is the historical maximum for this well. GRO decreased in October 2020 to 0.724 mg/L. DRO has exhibited a stable trend over the three most recent sampling events. DRO and GRO concentrations in OCD-5 will be reviewed again in 2021.
- GRO concentrations increased from April 2019 to June 2020 in wells EP wells MW-77, MW-81, and MW-82, However, the June 2020 concentrations remain below the historical maximum for each well except for MW-77, which increased to a historical maximum of 2.88 J mg/L.

Apparent GRO concentration increases shown on the COC concentration plots included in Appendix D for EP wells MW-78, MW-84, MW-86, and MW-122 in 2020 are attributed to elevated detection limits. GRO was not detected in these wells in 2020 above the plotted elevated detection limits of 1.57 mg/L (MW-78 and MW-122), 6.28 mg/L (MW-86) and 3.14 mg/L (MW-84).

Released to Imaging: 11/21/2023 10:16:55 AM

Volatile Organic Compounds, EPs

In 2020, groundwater samples collected from the following EP wells during each semiannual event were analyzed for VOCs:

- First Semiannual Event (42 wells): MW-1R, MW-2A, MW-3, MW-4A, MW-5A, MW-6A, MW-7A, MW-10, MW-11A, MW-15, MW-18A, MW-22A, MW-70, MW-72, MW-73, MW-74, MW-75, MW-76, MW-77, MW-78, MW-79, MW-80, MW-81, MW-82, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.
- Second Semiannual Event (31 wells): MW-2A, MW-3, MW-4A, MW-5A, MW-7A, MW-10, MW-18A, MW-22A, MW-70, MW-74, MW-75, MW-76, MW-79, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.

VOC results that exceeded their respective CGWSL in EP wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Evaporation Ponds	*First Semiannual Event (June 2020)*				
	Benzene	**0.00500**	42	1	0.0242 (MW-86)
	Methylene chloride	**0.00500**	42	2	0.018 J (MW-3)
	TCE	**0.00500**	42	1	0.022 (MW-6A)
	First Semiannual Event (October 2020)				
	Benzene	**0.00500**	31	1	0.0313 (MW-86)

J: Indicates an estimated value

As summarized above and highlighted in Table 4A, benzene and trichloroethene (TCE) were detected in exceedance of their respective CGWSLs in an EP well during at least one 2020 sampling event. Additionally, methylene chloride was detected in two EP wells (MW-3 and MW-6A) at estimated concentrations above the CGWSL in June 2020, but the results are not considered confirmed exceedances as methylene chloride is a common laboratory contaminant and it was not detected in the field duplicate collected from MW-3. The methylene chloride results are summarized and highlighted in Appendix C. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of VOCs in groundwater samples collected from EP wells were generally consistent with historical results with exceptions listed below. As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in EP wells are stable to declining over time, with the following exceptions:

- Well MW-86 was not sampled between April 2008 and October 2019 due to the presence of PSH at a thickness ≥0.03 feet. Benzene was detected in MW-86 at 0.0242 mg/L in June 2020 and 0.0313 mg/L in October 2020, which are the first exceedances of benzene above the CGWSL in any EP well since at least October 2018. However, this well was sampled once after installation in March 2007 and benzene exceeded the

Released to Imaging: 11/21/2023 10:16:55 AM

CGWSL at a concentration of 0.022 mg/L. Benzene concentrations in this well will be reviewed again in 2021.

- TCE was detected in MW-6A in June 2020 at a concentration of 0.0217 mg/L. This is the first detection of TCE in this well since at least April 2017. TCE concentrations in this well will be reviewed again in 2021.

Total Metals, EPs

In 2020, groundwater samples were collected from the following EP wells during each semiannual event for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium):

- First Semiannual Event (42 wells): MW-1R, MW-2A, MW-3, MW-4A, MW-5A, MW-6A, MW-7A, MW-10, MW-11A, MW-15, MW-18A, MW-22A, MW-70, MW-72, MW-73, MW-74, MW-75, MW-76, MW-77, MW-78, MW-79, MW-80, MW-81, MW-82, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.
- Second Semiannual Event (31 wells): MW-2A, MW-3, MW-4A, MW-5A, MW-7A, MW-10, MW-18A, MW-22A, MW-70, MW-74, MW-75, MW-76, MW-79, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.

In addition, groundwater samples collected from wells MW-18A, MW-86, and OCD-8A were analyzed for the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium). Total metal results that exceeded their respective CGWSL in EP wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Evaporation Ponds	First Semiannual Event (June 2020)				
	Arsenic	**0.0100**	42	23	0.270 (MW-75)
	Boron	**0.750**	3	2	1.88 (MW-18A)
	Chromium	**0.0500**	42	2	0.126 (MW-78)
	Iron	**1.00**	42	29	9.81 (OCD-7AR)
	Manganese	**0.200**	42	41	4.60 (MW-79)
	Selenium	**0.0500**	42	1	0.151 (MW-74)
	Second Semiannual Event (October 2020)				
	Arsenic	**0.0100**	31	18	0.320 (MW-75)
	Boron	**0.750**	3	2	1.98 (MW-18A)
	Iron	**1.00**	31	20	10.4 (OCD-7AR)
	Manganese	**0.200**	31	29	4.98 (MW79)

As summarized above and highlighted in Table 4B, arsenic, boron, chromium, iron, manganese, and selenium were detected in exceedance of their respective CGWSLs in EP wells during at

Released to Imaging: 11/21/2023 10:16:55 AM

least one 2020 sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater samples collected from EP wells were generally consistent with historical results, with the following exceptions:

- Arsenic concentrations in MW-7A increased from 0.0178 mg/L in June 2020 to 0.0373 mg/L in October 2020, which is below the historical maximum for this well. Arsenic concentrations in this well have fluctuated occasionally over time and will be reviewed again in 2021.
- Arsenic concentrations in MW-78 increased from 0.00686 mg/L in April 2019 to 0.0237 mg/L in October 2020, which is below the historical maximum for this well. Arsenic concentrations in this well have fluctuated occasionally over time and will be reviewed again in 2021.
- Arsenic concentrations in MW-84 increased over the four most recent sampling events from 0.0809 mg/L in April 2019 to 0.187 mg/L in October 2020, which is the historical maximum for this well. Arsenic concentrations in this well have fluctuated occasionally over time and will be reviewed again in 2021.
- Iron concentrations have fluctuated up to two orders of magnitude in many EP wells over time. Iron concentrations in EP wells during the 2020 semiannual sampling events were generally consistent with historical results except in MW-18A, MW-78, MW-82, and OCD-1R. Iron concentrations in these wells increased during the June 2020 semiannual event to the first CGWSL exceedance since at least April 2018. Concentrations in both wells decreased to below the CGWSL in October 2020.

Concentrations of target COC arsenic in EP wells are overall stable despite occasional fluctuations, except in wells discussed above, as shown in the COC concentration plots included in Appendix D.

Cyanide, EPs

Groundwater samples collected from EP wells MW-18A, MW-86, and OCD-8A during both 2020 semiannual events were analyzed for cyanide. Cyanide was detected below the CGWSL in well MW-86 during the October 2020 sampling event at an estimated concentration of 0.00261 J mg/L. Cyanide was not detected above the method detection limit or the CGWSL in groundwater samples collected from any other EP wells during either semiannual event..

Water Quality Parameters, EPs

In 2020, groundwater samples were collected from the following EP wells during each semiannual event for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]):

- First Semiannual Event (42 wells): MW-1R, MW-2A, MW-3, MW-4A, MW-5A, MW-6A, MW-7A, MW-10, MW-11A, MW-15, MW-18A, MW-22A, MW-70, MW-72, MW-73, MW-

Released to Imaging: 11/21/2023 10:16:55 AM

74, MW-75, MW-76, MW-77, MW-78, MW-79, MW-80, MW-81, MW-82, MW-83, MW-84, MW-86, MW-87, MW-88, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-2A, OCD-3, OCD-4, OCD-5, OCD-6, OCD-7AR, and OCD-8A.

- Second Semiannual Event (26 wells): MW-2A, MW-3, MW-4A, MW-5A, MW-7A, MW-10, MW-11A, MW-18A, MW-22A, MW-74, MW-75, MW-76, MW-79, MW-83, MW-84, MW-86, MW-120, MW-121, MW-122, MW-123, MW-124, OCD-1R, OCD-5, OCD-6, OCD-7AR, and OCD-8A .

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from various EP wells, as highlighted in Table 4C. The reported concentrations of these constituents in 2020 were overall consistent with historical results.

5.3.4 Three Mile Ditch – Analytical Results

Groundwater monitoring is ongoing along the inactive TMD. Analytical results of groundwater samples collected from TMD wells in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, TMD

In 2020, groundwater samples were collected from the following TMD wells during each semiannual event for analysis of DRO:

- First Semiannual Event (11 wells): MW-8, MW-16, MW-20, MW-21, MW-25, MW-26, MW-27, MW-46R, MW-68, MW-71, and MW-89.
- Second Semiannual Event (2 wells): MW-21 and MW-46R.

In addition, groundwater samples collected from wells MW-8 and MW-21 were analyzed for GRO. TPH results that exceeded their respective CGWSL in TMD wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TMD	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	11	3	0.218 (MW-89)
	TPH-GRO	**0.0101**	2	2	0.300 (MW-8)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	2	2	0.163 (MW-21)
	TPH-GRO	**0.0101**	1	1	0.492 (MW-21)

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in TMD wells sampled in at least one 2020 semiannual event.

Released to Imaging: 11/21/2023 10:16:55 AM

As shown in the COC concentration plots included in Appendix D, DRO concentrations have exhibited an overall increasing trend since 2013 in TMD wells MW-8, MW-16, MW-20, MW-21, MW-25, MW-26, MW-27, MW-68, and MW-89. However, the DRO concentrations in these wells have exhibited a stable to decreasing trend over at least the five most recent sampling events. DRO concentrations in these wells will be reviewed again in 2021.

As shown in the COC concentration plots included in Appendix D, GRO concentrations have exhibited an overall increasing trend since 2014 in TMD wells MW-8 and MW-21. Reported GRO concentrations in 2020 increased in well MW-8 from 0.127 mg/L in April 2019 to 0.300 mg/L in June 2020 but remain below the historical maximum of 0.585 mg/L observed in April 2017. GRO concentrations increased in well MW-21 from 0.229 mg/L in October 2019 to 0.284 mg/L in June 2020 to 0.492 mg/L in October 2020, which is the historical maximum for this well. GRO concentrations in both these wells will be reviewed again in 2021.

Volatile Organic Compounds, TMD

In 2020, groundwater samples collected from the following TMD wells during each semiannual event were analyzed for VOCs:

- First Semiannual Event (12 wells): MW-8, MW-16, MW-20, MW-21, MW-25, MW-26, MW-27, MW-46R, MW-68, MW-71, MW-89, and NP-1.
- Second Semiannual Event (3 wells): MW-21, MW-46R, and NP-1.

VOC results that exceeded their respective CGWSL in TMD wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TMD	*First Semiannual Event (June 2020)*				
	MTBE	**0.100**	12	3	0.216 (NP-1)
	Second Semiannual Event (October 2020)				
	MTBE	**0.100**	3	2	0.243 (MW-21)

As summarized above and highlighted in Table 4A, MTBE was detected in exceedance of its CGWSL in TMD wells during both 2020 sampling events. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 VOC results for groundwater samples collected from TMD wells were generally consistent with historical results. As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in TMD wells are overall stable, except for MTBE in wells MW-8, MW-21, and NP-1, which are discussed below:

- MTBE concentrations in MW-8 increased over the five most recent sampling events and exceeded the CGWSL for the first time in June 2020 at a concentration of 0.149 mg/L, which is the historical maximum for this well.

Released to Imaging: 11/21/2023 10:16:55 AM

- MTBE concentrations in MW-21 have exhibited an overall increasing trend since October 2013 and exceeded the CGWSL during both 2020 semiannual sampling events. Concentrations decreased slightly from 0.217 mg/L in October 2019 to 0.128 mg/L in June 2020 but increased to 0.243 mg/L in October 2020, which is the historical maximum for this well.
- MTBE concentrations in NP-1 have overall increased since November 2014 but have exhibited a stable to decreasing trend since 2017 despite seasonal fluctuations.

MTBE concentrations in these wells will be reviewed again in 2021.

Total Metals, TMD

In 2020, groundwater samples were collected from the following TMD wells during each semiannual event for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium):

- First Semiannual Event (11 wells): MW-8, MW-16, MW-20, MW-21, MW-25, MW-26, MW-27, MW-46R, MW-68, MW-71, and MW-89.
- Second Semiannual Event (2 wells): MW-21 and MW-46R.

In addition, the groundwater sample collected from TMD well MW-71 during the first 2020 semiannual event was analyzed for the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium). Total metal results that exceeded their respective CGWSL in TMD wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
TMD	*First Semiannual Event (June 2020)*				
	Manganese	**0.200**	11	5	0.906 (MW-25)
	Selenium	**0.0500**	11	2	0.0626 (MW-8)
	Uranium	**0.0300**	1	1	0.0698 (MW-71)

As summarized above and highlighted in Table 4B, manganese, selenium and uranium were detected in exceedance of their respective CGWSLs in TMD wells during the first 2020 sampling event. Total metals were not detected above the CGWSL during the second 2020 sampling event No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater samples collected from TMD wells were generally consistent with historical results, with the following exceptions:

- Selenium concentrations in TMD wells MW-8, MW-27, and MW-68 have increased over the four most recent sampling events conducted from April 2019 through June 2020. Selenium concentrations remain below the CGWSL in MW-27 and MW-68. Selenium exceeded the CGWSL in June 2020 for the first time since at least April 2017, at a concentration of 0.0626 mg/L.

Released to Imaging: 11/21/2023 10:16:55 AM

- Selenium concentrations in MW-21 were detected above the CGWSL in June 2020 for the first time since at least April 2018, at a concentration of 0.0521 mg/L, which is the historical maximum for this well since at least April 2018. Selenium concentrations decreased in October 2020 to 0.0429 mg/L, which is below the CGWSL.

Concentrations of target COC arsenic in TMD wells are overall stable, as shown in the COC concentration plots included in Appendix D.

Cyanide, TMD

Cyanide was not detected above the method detection limit or the CGWSL in the groundwater sample collected from TMD well MW-71 during the first 2020 semiannual event.

Water Quality Parameters, TMD

In 2020, groundwater samples were collected from the following TMD wells during each semiannual event for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]):

- First Semiannual Event (12 wells): MW-8, MW-16, MW-20, MW-21, MW-25, MW-26, MW-27, MW-46R, MW-68, MW-71, MW-89, and NP-1.
- Second Semiannual Event (2 wells): MW-21 and MW-46R.

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from TMD wells, as highlighted in Table 4C. The reported concentrations of these constituents in 2020 were consistent with historical results, with the following exceptions:

- Chloride concentrations in MW-8 increased over the four most recent sampling events from 334 mg/L in April 2017 to 599 mg/L in June 2020.
- Chloride concentrations in MW-68 exceeded the CGWSL in June 2020 for the first time since at least April 2017. Chloride concentrations increased from 145 mg/L in April 2019 to 354 mg/L in June 2020.

5.3.5 North Refinery Area – Analytical Results

Groundwater monitoring is ongoing in the northern portion of the active refinery (i.e., North Refinery Area). Groundwater samples were collected from the following North Refinery Area wells listed below during the 2020 semiannual sampling events:

- First Semiannual Event (22 wells): MW-23, MW-29, MW-39, MW-40, MW-41, MW-42, MW-43, MW-59, MW-60, MW-61, MW-62, MW-90, MW-91, MW-93, MW-95, MW-96, MW-98, RW-7, RW-9, RW-10, RW-16B, and RW-17A.
- Second Semiannual Event (11 wells): MW-23, MW-29, MW-39, MW-43, MW-60, MW-61, MW-62, MW-62R, MW-90, MW-96, and MW-98.

Released to Imaging: 11/21/2023 10:16:55 AM

Groundwater samples collected from these North Refinery Area wells were analyzed for DRO, GRO (except for RW-16B), VOCs, the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium), and water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite). In addition, groundwater samples collected from wells MW-43 and MW-60 were analyzed for cyanide and the expanded total metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium).

Analytical results of groundwater samples collected from wells located within the North Refinery Area in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, North Refinery Area

In 2020, groundwater samples were collected from North Refinery Area wells for analysis of TPH DRO and GRO. TPH results that exceeded their respective CGWSL in North Refinery Area wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
North Refinery	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	22	22	13.0 (MW-23)
	TPH-GRO	**0.0101**	21	21	36.2 (MW-91)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	11	11	17.9 (MW-23)
	TPH-GRO	**0.0101**	11	11	71.6 (MW-96)

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in all North Refinery Area wells sampled during both 2020 semiannual events.

As shown in the COC concentration plots included in Appendix D, DRO concentrations in North Refinery Area wells MW-29, MW-41, MW-59, MW-67, MW-91, MW-92, MW-95, MW-96, RW-7, RW-9, RW-10, RW-16 and RW-17 have exhibited an overall increasing trend since approximately 2010-2014. However, the DRO concentrations have exhibited a stable to decreasing trend over at least the six most recent sampling events in all of these wells except MW-29, MW-41, MW-59, RW-7, and RW-16. DRO concentrations in MW-29, MW-41, RW-7, and RW-16 in 2020 were less than historical maximum concentrations. DRO concentrations increased to a historical maximum of 2.97 mg/L in well MW-59 during the first 2020 semiannual event (this well is only sampled on an annual basis). DRO concentrations in the remaining North Refinery Area wells were overall stable over time.

GRO analytical results in groundwater samples collected from North Refinery Area wells in 2020 were generally consistent with historical results except in well MW-59, MW-91, MW-95, and MW-96, as follows:

Released to Imaging: 11/21/2023 10:16:55 AM

- GRO concentrations in MW-59 increased from 0.0605 mg/L in April 2019 to 0.302 mg/L in June 2020, which is the historical maximum for this well.
- GRO concentrations in MW-91 increased from 13.8 mg/L in April 2019 to 34.8 B mg/L in October 2019 to 36.2 mg/L in June 2020, which is the historical maximum for this well.
- GRO concentrations in MW-96 increased from 25.7 mg/L in October 2019 to 30.4 mg/L in June 2020 to 71.6 mg/L in October 2020, which is the historical maximum for this well.

GRO concentrations in these wells will be reviewed again in 2021. As shown in the COC concentration plots included in Appendix D, GRO concentrations in all other North Refinery Area wells are overall stable over time with occasional fluctuations.

Volatile Organic Compounds, North Refinery Area

In 2020, groundwater samples were collected from North Refinery Area wells for analysis of VOCs. VOC results that exceeded their respective CGWSL in North Refinery Area wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
North Refinery	*First Semiannual Event (June 2020)*				
	Benzene	**0.00500**	22	10	4.12 (MW-91)
	Toluene	**1.00**	22	1	6.95 (MW-91)
	Ethylbenzene	**0.700**	22	2	1.85 (MW-91)
	o-Xylene	**0.193**	22	1	0.649 (MW-91)
	Total Xylenes	**0.620**	22	3	2.50 (MW-91)
	MTBE	**0.100**	22	1	37.6 (MW-96)
	Naphthalene	**0.0300**	22	6	0.255 (MW-98)
	1,2,4-TMB	**0.0560**	22	6	0.646 (MW-98)
	1,3,5-TMB	**0.0600**	22	3	0.110 (MW-98)
	Second Semiannual Event (October 2020)				
	Benzene	**0.00500**	11	7	9.06 (MW-43)
	Ethylbenzene	**0.700**	11	1	0.788 (MW-98)
	Total Xylenes	**0.620**	11	4	1.88 (MW-98)
	MTBE	**0.100**	11	1	40.5 (MW-96)
	Naphthalene	**0.0300**	11	6	0.207 (MW-98)
	1,2,4-TMB	**0.0560**	11	5	0.371 (MW-98)
	1,3,5-TMB	**0.0600**	11	2	0.0820 (MW-98)

As summarized above and highlighted in Table 4A, benzene, toluene, ethylbenzene, o-xylene, total xylenes, MTBE, naphthalene, 1,2,4-TMB, and 1,3,5-trimethylbenzene (1,3,5-TMB) were detected in exceedance of their respective CGWSLs in North Refinery Area wells during at least one 2020 semiannual sampling event. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 VOC results in groundwater samples collected from North Refinery Area wells were generally consistent with historical results with exceptions listed below. As shown in the COC

Released to Imaging: 11/21/2023 10:16:55 AM

concentration plots included in Appendix D, concentrations of target VOCs in North Refinery Area wells have exhibited an overall stable trend over time despite occasional fluctuations, with the following exceptions:

- Benzene and MTBE concentrations in MW-41 increased over the three to four most recent sampling events but remain below their respective historical maximums in this well. Benzene increased from not detected above the method detection limit in April 2018 to 0.00758 mg/L in April 2019 to 0.0173 mg/L in June 2020. MTBE increased from 0.00380 mg/L in April 2017 to 0.0254 mg/L in June 2020.
- Benzene, ethylbenzene, toluene, MTBE, and naphthalene concentrations have overall increased in MW-43 since 2012. However, concentrations of these target VOCs have exhibited a stable to decreasing trend since October 2015. Benzene, ethylbenzene, toluene, MTBE, and naphthalene concentrations in MW-43 have decreased or remained stable during both semiannual sampling events in 2020.
- MTBE and naphthalene concentrations in MW-59 increased from not detected above the method detection limit in April 2019 to 0.00350 mg/L and 0.00202 J mg/L, respectively, in June 2020. This is the first time these VOCs have been detected above the method detection limit in this well and is the historical maximum concentration; however, both concentrations remain below the CGWSL.
- MTBE concentrations in MW-62 increased over the four most recent sampling events from not detected above the method detection limit of 0.00734 mg/L in April 2019 to 0.0836 mg/L in October 2020, which is the historical maximum in this well. MTBE concentrations have fluctuated over time in this well and remain below the CGWSL.
- Ethylbenzene, toluene, and total xylenes have generally increased in MW-91 over the four most recent sampling events. Ethylbenzene and toluene concentrations during the June 2020 sampling event remain below historical maximum concentrations in this well. The June 2020 total xylenes concentration of 2.50 mg/L is the historic maximum concentration reported in this well. MW-91 was not sampled in October 2020 due to the presence of PSH at a thickness ≥0.03 feet.
- Benzene concentrations in MW-93 increased from 0.673 mg/L in April 2019 to 1.21 mg/L in June 2020 but remains below the historical maximum of 2.70 mg/L in April 2009. Benzene is overall stable to decreasing in this well over time.
- MTBE concentrations in RW-9 increased from 0.00439 mg/L in April 2019 to 0.0674 mg/L in June 2020, which is the historic maximum for this well. However, MTBE concentrations remain below the CGWSL.

Total Metals, North Refinery Area

In 2020, groundwater samples were collected from North Refinery Area wells for analysis of total metals. Total metal results that exceeded their respective CGWSL in North Refinery Area wells are summarized in the table below:

Released to Imaging: 11/21/2023 10:16:55 AM

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
North Refinery	*First Semiannual Event (June 2020)*				
	Arsenic	**0.0100**	22	5	0.0426 (MW-62)
	Barium	**2.00**	22	1	9.81 (MW-23)
	Boron	**0.750**	2	1	0.781 (MW-43)
	Iron	**1.00**	22	2	2.57 (RW-7)
	Manganese	**0.200**	22	7	0.857 (MW-41)
	Selenium	**0.0500**	22	1	0.0922 (RW-16B)
	Second Semiannual Event (October 2020)				
	Arsenic	**0.0100**	11	3	0.079 (MW-62R)
	Barium	**2.00**	11	1	12.3 (MW-23)
	Boron	**0.750**	2	1	0.770 (MW-43)
	Iron	**1.00**	11	1	2.90 (MW-29)
	Manganese	**0.200**	11	4	1.09 (MW-62R)

As summarized above and highlighted in Table 4B, arsenic, barium, boron, iron, manganese, and selenium were detected in exceedance of their respective CGWSLs in North Refinery wells during at least one 2020 semiannual sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater samples collected from North Refinery Area wells were generally consistent with historical results, with the following exceptions:

- Barium concentrations in MW-23 increased from 9.81 mg/L in June 2020 to 12.3 mg/L in October 2020, which is the historical maximum since at least April 2018
- Arsenic concentrations in MW-29 have overall increased since April 2019 but appear to be stabilizing over the last three sampling events. Arsenic concentrations have occasionally fluctuated above and below the CGWSL over time in this well and remain below the historical maximum of 0.0429 mg/L in April 2008.
- Arsenic concentrations in MW-41 increased from 0.00673 mg/L in April 2019 to 0.0107 mg/L in June 2020, which is the first exceedance of the CGWSL since April 2012, but below the historical maximum concentration of 0.0195 mg/L in December 2006.
- Arsenic concentrations in MW-62 have overall increased since October 2018and have exceeded the CGWSL during the last three sampling events. Arsenic concentrations were reported at 0.0426 mg/L in June 2020 and 0.0451 mg/L in October 2020, which is the historical maximum reported in this well. Arsenic concentrations have occasionally fluctuated above and below the CGWSL in this well over time and will be reviewed again in 2021.
- Arsenic, iron, and manganese concentrations in MW-62R exceeded their respective CGWSLs in October 2020. As this well was installed in September 2020, the October

Released to Imaging: 11/21/2023 10:16:55 AM

semiannual event was the first groundwater data collected for this well. Total metals concentrations in this well will be reviewed again in 2021.

- Manganese concentrations in MW-93 in June 2020 exceeded the CGWSL for the first time since April 2017, at a concentration of 0.208 mg/L. This is the historical maximum for this well since at least April 2017.
- Arsenic concentrations in RW-16 increased over the three most recent sampling events from 0.009922 mg/L in April 2018 to 0.0267 mg/L in June 2020, which is the historical maximum for this well. Arsenic concentrations in this well will be reviewed again in 2021. Iron concentrations in RW-16 increased from 0.0160 J mg/L in April 2019 to 1.10 mg/L in June 2020, which is the first CGWSL exceedance in this well since at least April 2017. Iron concentrations have fluctuated above and below the CGWSL across the facility over time.

As shown in the COC concentration plots included in Appendix D, concentrations of target COC arsenic in North Refinery Area wells have fluctuated above and below the CGWSL over time in wells MW-23, MW-29, MW-39, MW-41 through MW-43, MW-60, MW-62, MW-67, MW-90, MW-93, RW-1, RW-2, RW-7, and RW-16. Arsenic concentrations are overall stable to declining, despite occasional fluctuating, with the exceptions noted above.

Cyanide, North Refinery Area

Groundwater samples collected from North Refinery Area wells MW-43 and MW-60, during the 2020 semiannual events were analyzed for cyanide. Cyanide was not detected above the method detection limit of the CGWSL in groundwater samples collected from these wells.

Water Quality Parameters, North Refinery Area

In 2020, groundwater samples were collected from North Refinery Area wells for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]).

No CGWSLs are applicable for calcium, potassium, or sodium. Nitrate/nitrite did not exceed the CGWSL in any of the North Refinery Area wells during both 2020 semiannual events. Chloride, fluoride, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from various North Refinery Area wells, as highlighted in Table 4C. The reported concentrations of these constituents were generally consistent with historical results except sulfate concentrations in MW-95 exceeded the CGWSL for the first time since at least April 2017. Sulfate concentrations increased from 561 mg/L in April 2019 to 682 mg/L in June 2020. Water quality parameter concentrations have fluctuated over time in this well.

Released to Imaging: 11/21/2023 10:16:55 AM

5.3.6 South Refinery Area – Analytical Results

Groundwater monitoring is ongoing in the southern portion of the active refinery (i.e., South Refinery Area). Analytical results of groundwater samples collected from wells located within the South Refinery Area in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, South Refinery Area

Groundwater samples were collected from the following South Refinery Area wells during each 2020 semiannual event for analysis of DRO and GRO, unless noted otherwise:

- First Semiannual Event (16 wells): MW-28, MW-50 (DRO only), MW-52, MW-64, MW-66, MW-99, MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-109, MW-110, MW-139, and RW-4 (DRO only).
- Second Semiannual Event (13 wells): MW-28, MW-50 (DRO only), MW-52, MW-64, MW-66, MW-101, MW-102, MW-104, MW-105, MW-106, MW-109, MW-110, and MW-139.

TPH results that exceeded their respective CGWSL in South Refinery Area wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
South Refinery	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	16	16	14.6 (MW-106)
	TPH-GRO	**0.0101**	14	13	102 (MW-64)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	13	13	16.5 (MW-106)
	TPH-GRO	**0.0101**	12	11	94.8 (MW-64)

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in South Refinery Area wells sampled during both 2020 semiannual events.

As shown in the COC concentration plots included in Appendix D, DRO concentrations in South Refinery Area wells MW-28, MW-50, MW-99, MW-101, MW-104, MW-106, and RW-4 have exhibited an overall increasing trend since approximately 2011 with occasional fluctuations. However, DRO concentrations have exhibited a stable to decreasing trend in these wells over at least the five most recent sampling events, in wells other than MW-101. DRO concentrations in MW-101 increased slightly from 4.85 mg/L in June 2020 to 6.07 mg/L in October 2020, which is the historical maximum for this well. DRO concentrations in these wells will be reviewed again in 2021.

As shown in the COC concentration plots included in Appendix D, GRO concentrations in South Refinery Area wells have exhibited a stable trend over time despite occasional fluctuations,

Released to Imaging: 11/21/2023 10:16:55 AM

except in MW-48 and MW-101. GRO concentrations in MW-48 exhibited an overall increasing trend between 2014 and 2018 but was stable to decreasing between April 2018 and October 2019. MW-48 was not sampled in 2020 due to the presence of PSH at a thickness ≥0.03 feet. GRO concentrations in MW-101 increased from 0.553 mg/L in June 2020 to 5.37 mg/L in October 2020. GRO concentrations in these wells will be reviewed again in 2021.

Volatile Organic Compounds, South Refinery Area

Groundwater samples were collected from the following South Refinery Area wells during each 2020 semiannual event for analysis of VOCs:

- First Semiannual Event (17 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-99, MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-109, MW-110, MW-139, RA-313, and RW-4.
- Second Semiannual Event (13 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-101, MW-102, MW-104, MW-105, MW-106, MW-109, MW-110, and MW-139.

VOC results that exceeded their respective CGWSL in North Refinery Area wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
South Refinery	*First Semiannual Event (April 2020)*				
	Benzene	**0.00500**	17	11	27.5 (MW-64)
	Toluene	**1.00**	17	1	9.93 (MW-64)
	Ethylbenzene	**0.700**	17	1	1.76 (MW-64)
	o-Xylene	**0.193**	17	1	1.03 (MW-64)
	Total Xylenes	**0.620**	17	1	4.29 (MW-64)
	MTBE	**0.100**	17	5	1.62 (MW-66)
	Naphthalene	**0.0300**	17	2	0.167 (MW-66)
	1,2,4-TMB	**0.0560**	17	4	0.453 J (MW-64)
	1,3,5-TMB	**0.0600**	17	1	0.076 J (MW-64)
	Second Semiannual Event (October 2020)				
	Benzene	**0.00500**	13	9	27.2 (MW-64)
	Toluene	**1.00**	13	1	8.09 (MW-64)
	Ethylbenzene	**0.700**	13	1	1.55 (MW-64)
	o-Xylene	**0.193**	13	1	0.794 (MW-64)
	Total Xylenes	**0.620**	13	1	3.1 (MW-64)
	MTBE	**0.100**	13	5	1.9 (MW-66)
	Naphthalene	**0.0300**	13	3	0.127 J (MW-102)
	1,2,4-TMB	**0.0560**	13	4	0.252 (MW-64)

J: Indicates an estimated value

As summarized above and highlighted in Table 4A and Appendix C, benzene, toluene, ethylbenzene, o-xylene, total xylenes, MTBE, naphthalene, 1,2,4-TMB, and 1,3,5-TMB were detected in exceedance of their respective CGWSLs in South Refinery Area wells during at

Released to Imaging: 11/21/2023 10:16:55 AM

least one 2020 sampling event. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of VOCs in groundwater samples collected from South Refinery Area wells were generally consistent with historical results with exceptions listed below.

- Benzene, ethylbenzene, naphthalene, o-xylene, toluene, and total xylenes increased in MW-101 in October 2020. Benzene concentrations increased from 0.000430 J mg/L in October 2019 to 0.00438 mg/L in June 2020 to 2.32 mg/L in October 2020, which is below the historical maximum but the first exceedance of the CGWSL since April 2017. Ethylbenzene increased from not detected above the method detection limit in October 2019 to 0.000302 J mg/L in June 2020 to 0.0180 mg/L in October 2020, which is below the historical maximum and the CGWSL. Naphthalene, o-xylene, toluene, and total xylenes increased from not detected above their respective detection limits in June 2020 to 0.0180 mg/L, 0.0000814 J mg/L, 0.00858 mg/L, and 0.0779 mg/L, respectively, which are each below their respective CGWSLs.
- 1,2,4-TMB and 1,3,5-TMB concentrations in MW-101 increased from not detected above their respective method detection limit in June 2020 to 0.0254 mg/L and 0.00284 mg/L, respectively, in October 2020, which are the first detections of 1,2,4-TMB and 1,3,5-TMB in this well since at least April 2018.
- Ethylbenzene concentrations in MW-105 increased from 0.0282 J mg/L in June 2020 to 0.584 mg/L in October 2020, which is below the historical maximum and CGWSL. Ethylbenzene has fluctuated above and below the CGWSL in this well over time.
- Benzene concentrations increased in MW-106 from 9.39 mg/L in June 2020 to 14.9 mg/L in October 2020, which is slightly below the historical maximum of 15.0 mg/L in September 2009. Benzene concentrations have been generally stable in this well since 2015 and will be reviewed again in 2021.

As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in South Refinery Area wells have exhibited overall stable trends over time despite occasional fluctuations, with the exceptions listed above.

Total Metals, South Refinery Area

In 2020, groundwater samples were collected from the following South Refinery Area wells during each semiannual event for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium):

- First Semiannual Event (16 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-99, MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-109, MW-110, MW-139, and RW-4.
- Second Semiannual Event (13 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-101, MW-102, MW-104, MW-105, MW-106, MW-109, MW-110, and MW-139.

Released to Imaging: 11/21/2023 10:16:55 AM

In addition, groundwater samples collected from South Refinery Area wells MW-28, MW-52, and MW-66 were also analyzed for the expanded metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium) during both 2020 semiannual events. Total metals results that exceeded their respective CGWSL in South Refinery Area wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
South Refinery	*First Semiannual Event (June 2020)*				
	Arsenic	**0.0100**	16	5	0.0735 (MW-101)
	Barium	**1.00**	16	3	8.69 (MW-102)
	Boron	**0.750**	3	2	1.32 (MW-28)
	Iron	**1.00**	16	1	3.42 (MW-101)
	Manganese	**0.200**	16	7	1.92 (MW-110)
	Second Semiannual Event (October 2020)				
	Arsenic	**0.0100**	13	6	0.0386 (MW-110)
	Barium	**1.00**	13	3	8.81 (MW-102)
	Boron	**0.750**	3	2	1.32 (MW-28)
	Iron	**1.00**	13	1	1.75 (MW-101)
	Manganese	**0.200**	13	6	2.01 (MW-110)

As summarized above and highlighted in Table 4B, arsenic, barium, boron, iron, and manganese were detected in exceedance of their respective CGWSLs in South Refinery Area wells during both 2020 sampling events. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater in South Refinery Area wells were generally consistent with historical results, with the following exceptions:

- Arsenic concentrations in MW-106 increased over the four most recent sampling events from 0.00725 mg/L in April 2019 to 0.0255 mg/L in October 2020, which is the historical maximum for this well. Arsenic concentrations in this well will be reviewed again in 2021.
- Barium concentrations in MW-105 increased from 0.983 mg/L in June 2020 to 8.29 mg/L in October 2020, which is the maximum concentration in this well since at least April 2018. Barium has fluctuated above and below the CGWSL in this well.

Concentrations of target COC arsenic in South Refinery Area wells are overall stable with occasional fluctuations, as shown in the COC concentration plots included in Appendix D. Arsenic concentrations have fluctuated above and below the CGWSL over time in wells KWB-6, MW-28, MW-48, MW-52, MW-65, MW-66, MW-99, MW-104 through MW-107, MW-109, and MW-110.

Cyanide, South Refinery Area

Groundwater samples collected from South Refinery Area wells MW-28, MW-52, and MW-66 were analyzed for cyanide during both 2020 semiannual events. Cyanide was not detected

Released to Imaging: 11/21/2023 10:16:55 AM

above the method detection limit or the CGWSL in groundwater samples collected from these wells.

Water Quality Parameters, South Refinery Area

In 2020, groundwater samples were collected from the following South Refinery Area wells during each semiannual event for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]):

- First Semiannual Event (17 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-99, MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-109, MW-110, MW-139, RA-313, and RW-4.
- Second Semiannual Event (13 wells): MW-28, MW-50, MW-52, MW-64, MW-66, MW-101, MW-102, MW-104, MW-105, MW-106, MW-109, MW-110, and MW-139.

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples collected from at least one South Refinery Area well as highlighted in Table 4C. The reported concentrations of these constituents exhibit an overall stable trend with occasional fluctuations across the South Refinery Area, with the following exceptions:

- Nitrate/nitrite concentrations in MW-50 increased from 1.53 mg/L in October 2019 to 74.6 mg/L in June 2020 to 78.5 mg/L in October 2020. The 2020 results were the first exceedances of the CGWSL of 10.0 mg/L since at least April 2018
- Nitrate/nitrite concentrations in MW-52 have overall increased since April 2018 and continue to exceed the CGWSL in 2020; however, concentrations have generally stabilized during the past four semiannual sampling events since April 2019.

5.3.7 Field East of Refinery – Analytical Results

Groundwater monitoring is ongoing in the Field East of Refinery located between the refinery and the EPs. Analytical results of groundwater samples collected from wells located within the Field East of Refinery in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, Field East of Refinery

Groundwater samples were collected from the following wells located within the Field East of Refinery during each 2020 semiannual event for analysis of DRO and GRO, unless noted otherwise:

- First Semiannual Event (17 wells): KWB-1A (DRO only), KWB-7 (DRO only), KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-111, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-131, MW-134, MW-135, and RW-12R (DRO only).

Released to Imaging: 11/21/2023 10:16:55 AM

- Second Semiannual Event (15 wells): KWB-1A (DRO only), KWB-7 (DRO only), KWB-8 (DRO only), KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-134, and MW-135.

TPH results that exceeded their respective CGWSL Field East of Refinery wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Field East of Refinery	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	17	10	7.29 (KWB-7)
	TPH-GRO	**0.0101**	14	8	8.68 (MW-131)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	15	11	6.8 (KWB-8)
	TPH-GRO	**0.0101**	12	8	3.3 (MW-113)

As summarized above and highlighted in Table 4A, DRO and GRO were detected in exceedance of their respective CGWSLs in Field East of Refinery wells sampled during both 2020 semiannual events.

As shown in the COC concentration plots included in Appendix D, DRO analytical results in groundwater samples collected from wells located in the Field East of Refinery in 2020 were overall consistent with historical results, with the following exceptions:

- DRO concentrations in wells KWB-1A, KWB-1C, KWB-7, KWB-11A, MW-58 and MW-125 have overall increased since approximately 2011-2013 with occasional fluctuations. However, DRO concentrations have stabilized in these wells over at least the three most recent sampling events except in KWB-7, KWB-11B, and MW-58. Well MW-58 was not sampled in 2020 due to the presence of PSH at a thickness ≥0.03 feet. DRO concentrations in KWB-7 increased to a historical maximum of 7.29 mg/L in June 2020 but decreased to 1.05 mg/Lin October 2020, which is consistent with historical results. DRO concentrations in KWB-11B increased from not detected above the method detection limit of 0.0247 mg/L in October 2019 to 0.0514 mg/L in June 2020 to 0.0956 mg/L in October 2020, which is below the historical maximum for this well. DRO concentrations in these wells will be reviewed again in 2021.

- DRO concentrations in KWB-8 increased to 6.8 mg/L in October 2020, which is the historical maximum for this well. However, this well has only been sampled four times since installation and was most previously sampled in October 2017, due to the presence of PSH presence at a thickness ≥0.03 feet from April 2018 through June 2020. DRO concentrations in this well will be reviewed again in 2021.

GRO analytical results in groundwater samples collected from wells located in the Field East of Refinery in 2020 were overall consistent with historical results, as shown in the COC concentration plots included in Appendix D, with the following exceptions:

- GRO concentrations in well KWB-11A have overall increased since 2012 but have generally stabilized over the twelve most recent sampling events (i.e., since October

Released to Imaging: 11/21/2023 10:16:55 AM

2014). GRO concentrations in June 2020 increased to a historical maximum of 0.444 mg/L but decreased to 0.0992 J mg/L in October 2020.

- GRO concentrations in MW-111 increased from 1.37 mg/L in October 2019 to 3.86 mg/L in June 2020, which is the historical maximum for this well. This well was not sampled in October 2020 due to the presence of PSH at a thickness ≥0.03 feet.
- GRO concentrations in wells MW-113 have overall increased since 2015. However, concentrations are stabilizing over the four most recent sampling events despite fluctuations. GRO concentrations decreased from 4.54 mg/L in October 2019 to 1.30 mg/L in June 2020 and increased slightly to 3.30 mg/L in October 2020. DRO concentrations will be reviewed again in 2021.

Volatile Organic Compounds, Field East of Refinery

Groundwater samples were collected from the following wells located in the Field East of Refinery during each 2020 semiannual event for analysis of VOCs:

- First Semiannual Event (20 wells): KWB-1A, KWB-7, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-111, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-131, MW-134, MW-135, RA-4196, RA-4798, RW-12R, and RW-18A.
- Second Semiannual Event (21 wells): KWB-1A, KWB-7, KWB-8, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-134, MW-135, MW-145, MW-146, MW-147, MW-148, RA-4196, and RA-4798.

VOC results that exceeded their respective CGWSL in Field East of Refinery wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Field East of Refinery	*First Semiannual Event (June 2020)*				
	1,2,4-TMB	**0.0560**	20	2	0.110 (MW-131)
	Benzene	**0.00500**	20	5	0.907 (MW-131)
	MTBE	**0.100**	20	2	2.91 (MW-131)
	O-Xylene	**0.193**	20	1	0.242 (MW-131)
	Total Xylenes	**0.620**	20	1	0.786 (MW-131)
	Second Semiannual Event (October 2020)				
	1,2,4-TMB	**0.0560**	21	2	0.833 (KWB-8)
	1,3,5-TMB	**0.0600**	21	1	0.191 J (KWB-8)
	Benzene	**0.00500**	21	3	17.8 (KWB-8)
	Ethylbenzene	**0.700**	21	1	2.89 (KWB-8)
	Naphthalene	**0.0300**	21	1	0.539 (KWB-8)
	Toluene	**1.00**	21	1	1.08 (KWB-8)
	Total Xylenes	**0.620**	21	1	4.19 (KWB-8)

As summarized above and highlighted in Table 4A, benzene, MTBE, naphthalene, o-xylene, toluene, total xylenes, 1,2,4-TMB, and 1,3.5-TMB were detected in exceedance of their

Released to Imaging: 11/21/2023 10:16:55 AM

respective CGWSLs in Field East of Refinery wells during at least one 2020 sampling event. No other VOC was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of VOCs in groundwater samples collected from wells located in the Field East of Refinery were generally consistent with historical results with exceptions listed below. As shown in the COC concentration plots included in Appendix D, concentrations of target VOCs in wells located in the Field East of Refinery have wells have exhibited stable to fluctuating trends over time, with the following exceptions:

- Benzene, naphthalene, toluene, total xylenes, and 1,2,4-TMB concentrations in KWB-7 increased in June 2020 but decreased to concentrations consistent with historical trends in October 2020. June 2020 concentrations of benzene, naphthalene, toluene, and total xylenes were below each respective historical maximum. The 1,2,4-TMB concentration of 0.0876 mg/L in June 2020 was the first exceedance of the CGWSL and maximum in this well since at least October 2017; 1,2,4-TMB decreased to below the CGWSL at 0.00287 mg/L in October 2020. VOC concentrations in this well will be reviewed again in 2021.
- Benzene, ethylbenzene, naphthalene, toluene, total xylenes, 1,2,4-TMB, and 1,3,5-TMB concentrations overall increased in KWB-8 from October 2016 to the following concentrations in October 2020: 17.8 mg/L (benzene), 2.89 mg/L (ethylbenzene), 0.539 J mg/L (naphthalene), 1.08 mg/L (toluene), 4.19 mg/L (total xylenes), 0.833 mg/L (1,2,4-TMB), and 0.191 J mg/L (1,3,5-TMB). . The October 2020 results for these VOCs were the historical maximum for this well except for toluene. However, this well has only been sampled four times since installation and has not been sampled since October 2017 due to the presence of PSH at a thickness ≥0.03 feet from April 2018 through June 2020. VOC concentrations in this well will be reviewed again in 2021.
- Benzene concentrations increased in KWB-11B increased from not detected above the method detection limit in June 2020 to 0.00192 mg/L in October 2020, which is below the CGWSL but the first detection above the method detection limit and historical maximum for this well. MTBE concentrations in KWB-11B increased over the four most recent sampling events from 0.000774 J mg/L in April 2019 to 0.00156 mg/L in October 2020, which is two orders of magnitude below the CGWSL but the historical maximum for this well.
- Benzene concentrations increased in RW-12R from 0.0764 mg/L in April 2019 to 0.154 mg/L in June 2020, which is the first exceedance of the CGWSL in this will since 2017 but below the historical maximum for this well.
- Benzene, ethylbenzene, total xylenes, and 1,3,5-TMB concentrations in MW-111 increased over at least the three most recent sampling events conducted from October 2018 to June 2020. Benzene increased over the five most recent sampling events, from 0.0216 J mg/L in April 2018 to 0.439 mg/L in June 2020. Ethylbenzene increased over the four most recent sampling events, from not detected above the method detection limit in October 2018 to 0.0408 mg/L in June 2020. Total xylenes increased over the four most recent sampling events, from not detected above the method detection limit in

Released to Imaging: 11/21/2023 10:16:55 AM

October 2018 to 0.0148 J mg/L in June 2020. 1,3,5-TMB increased from not detected above the method detection limit in April 2019 to 0.00436 J mg/L in June 2020. Each is the respective historical maximum concentration for this well. MW-111 was not sampled in October 2020 due to the presence of PSH at a thickness ≥0.03 feet. Benzene concentrations in this well will be reviewed again in 2021.

- Benzene, ethylbenzene, toluene, total xylenes, and naphthalene concentrations in MW-113 have overall increased since April 2019. Concentrations of each of these VOCs decreased from October 2019 to June 2020 and increased in October 2020. However, concentrations of these VOCs remain below their respective historical maximums and October 2019 concentrations. VOC concentrations in this well will be reviewed again in 2021.
- MTBE was detected above the method detection limit for the first time in MW-126A in June 2020 and October 2020. MTBE concentrations increased from not detected above a method detection limit in October 2019 to 0.000248 J mg/L in June 2020 to 0.000502 mg/L in October 2020, which is the historical maximum for this well but several orders of magnitude below the CGWSL.
- MTBE concentrations in MW-130 has overall increased over the five most recent sampling events since October 2018. MTBE concentrations increased from 0.000976 J mg/L in October 2018 to 0.00424 mg/L in June 2020, which is the historical maximum in this well, but decreased to 0.00328 mg/L in October 2020. MTBE concentrations remain at least an order of magnitude below the CGWSL.
- Naphthalene, toluene, and total xylenes concentrations in MW-131 have overall increased since October 2016 but remain below their respective historical maximum concentrations reported in April 2014. Concentrations of o-xylenes and 1,2,4-TMB have overall increased in this well since April 2017 but decreased between October 2019 and June 2020. MW-131 was not sampled in October 2020 due to the presence of PSH at a thickness ≥0.03 feet.
- Benzene was detected above the method detection limit for the first time in MW-135 in October 2020. Benzene concentrations increased from not detected above the method detection limit in June 2020 to 0.00250 mg/L in October 2020, which is the historical maximum for this well but at least an order of magnitude below the CGWSL.
- MTBE was detected in newly installed wells MW-145 and MW-148 at concentrations of 0.000507 J mg/L and 0.000183 J mg/L, respectively, which are several orders of magnitude below the CGWSL. No other VOC was detected above the method detection limit in these wells.

Total Metals, Field East of Refinery

In 2020, groundwater samples were collected from the following wells located in the Field East of Refinery during each 2020 semiannual event for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium):

Released to Imaging: 11/21/2023 10:16:55 AM

- First Semiannual Event (18 wells): KWB-1A, KWB-7, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-111, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-131, MW-134, MW-135, RW-12R, and RW-18A.
- Second Semiannual Event (15 wells): KWB-1A, KWB-7, KWB-8, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-134, and MW-135.

In addition, groundwater samples collected from wells KWB-1A, KWB-7, KWB-11A, KWB-11B, KWB-12A and KWB-12B during both 2020 semiannual events and well KWB-8 during the second 2020 semiannual event were analyzed for the expanded metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium). Total metals results that exceeded their respective CGWSL in Field East of Refinery wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Field East of Refinery	*First Semiannual Event (June 2020)*				
	Arsenic	**0.0100**	18	3	0.0241 (MW-131)
	Barium	**2.00**	18	1	2.39 (MW-131)
	Chromium	**0.0500**	18	1	0.0557 (RW-12R)
	Iron	**1.00**	18	5	9.23 (MW-111)
	Manganese	**0.200**	18	9	2.57 (KWB-7)
	Second Semiannual Event (October 2020)				
	Arsenic	**0.0100**	15	1	0.0157 (MW-57)
	Iron	**1.00**	15	4	6.56 (MW-57)
	Manganese	**0.200**	15	7	2.15 (KWB-7)

As summarized above and highlighted in Table 4B, arsenic, barium, chromium, iron, and manganese were detected in exceedance of their respective CGWSLs in Field East of Refinery wells during at least one 2020 sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 groundwater analytical results of total metals in wells located in the Field East of Refinery were generally consistent with historical results, with the following exceptions:

- Arsenic, cobalt, chromium, iron, lead, and nickel concentrations in KWB-8 increased in October 2020 to historical maximums for this well since at least October 2016. However, only iron exceeded the CGWSL in this well in October 2020. There is limited historical data for this well due to the historical presence of PSH. Total metals concentrations in this well will be reviewed again in 2021.
- Iron concentrations have fluctuated up to an order of magnitude in Field East of Refinery wells over time. Iron concentrations in 2020 were generally consistent with historical results wells except in MRW-18A. Iron concentrations in well RW-18A increased from 0.0191 J mg/L in April 2019 to 3.06 mg/L in June 2020, which is the only CGWSL exceedance in this well since at least April 2017.

Released to Imaging: 11/21/2023 10:16:55 AM

As shown in the COC concentration plots included in Appendix D, concentrations of target COC arsenic in wells located in the Field East of Refinery are overall stable, except in KWB-8, as discussed above. Arsenic concentrations have fluctuated above and below the CGWSL over time in wells KWB-7, KWB-11A, MW-57, MW-58, MW-111, MW-127, and MW-135.

Cyanide, Field East of Refinery

Groundwater samples collected from wells KWB-1A, KWB-7, KWB-11A, KWB-11B, KWB-12A and KWB-12B during both 2020 semiannual events and well KWB-8 during the second 2020 semiannual event were analyzed for cyanide. Cyanide was detected in both the parent and duplicate sample collected from well KWB-12B during the October 2020 sampling event at concentrations of 0.00596 mg/L and 0.0565 mg/L, respectively, which are least an order of magnitude below the CGWSL of 0.200 mg/L. Cyanide was not detected above the method detection limit or the CGWSL in groundwater samples collected from any other Field East of Refinery wells during either semiannual event.

Water Quality Parameters, Field East of Refinery

In 2020, groundwater samples were collected from the following wells located in the Field East of Refinery during each semiannual event for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]):

- First Semiannual Event (20 wells): KWB-1A, KWB-7, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-111, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-131, MW-134, MW-135, RA-4196, RA-4798, RW-12R, and RW-18A.
- Second Semiannual Event (17 wells): KWB-1A, KWB-7, KWB-8, KWB-11A, KWB-11B, KWB-12A, KWB-12B, MW-57, MW-113, MW-125, MW-126A, MW-126B, MW-130, MW-134, MW-135, RA-4196, and RA-4798 .

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples from at least one well within the Field East of Refinery as highlighted in Table 4C. The reported concentrations of these constituents exhibit an overall stable trend, with some seasonal fluctuations between the first and second historical semiannual events, with the following exceptions:

- Sulfate concentrations increased in KWB-8 from 417 mg/L in October 2017 to 1,660 mg/L in October 2020. However, this well has not been sampled since October 2017 due to the presence of PSH at a thickness ≥0.03 feet from April 2018 through June 2020.
- Nitrate/nitrite concentrations in KWB-12B increased from 7.15 mg/L (duplicate sample) in October 2019 to 11.5 mg/L in the parent sample in June 2020 (duplicate sample concentration was 8.27 mg/L).Nitrate/nitrite concentrations in KWB-12B decreased to 6.35 mg/L (parent sample) and 7.25 mg/L (duplicate sample) in October 2020.

Released to Imaging: 11/21/2023 10:16:55 AM

5.3.8 Areas Cross-Gradient and Up-Gradient of Refinery – Analytical Results

Groundwater monitoring is ongoing in areas both cross-gradient and up-gradient of the refinery. Cross-gradient wells KWB-13 (located south of the refinery), and RA-3156 (located southeast of the refinery); and up-gradient wells UG-1, UG-2, UG-3R, and UG-4 (all located to the west of the refinery), were sampled during the first 2020 semiannual event. Cross-gradient well MW-136 (located north of the refinery) was sampled during both 2020 semiannual events. Analytical results of groundwater samples collected from cross-gradient and up-gradient wells in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, Areas Cross-gradient and Up-gradient of Refinery

In 2020, groundwater samples were collected from the following cross-gradient and up-gradient wells during each semiannual event for analysis of DRO and GRO, unless noted otherwise:

- First Semiannual Event (six wells): KWB-13 (DRO only), MW-136, UG-1, UG-2, UG-3R, and UG-4.
- Second Semiannual Event (one well): MW-136.

TPH results that exceeded their respective CGWSL in cross-gradient and up-gradient wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Cross- & Up-Gradient	First Semiannual Event (June 2020)				
	TPH-GRO	**0.0101**	5	2*	0.326 V3 (MW-136)
	TPH DRO	**0.0858**	6	1	0.0924 J (MW-136)
	Second Semiannual Event (October 2020)				
	TPH-GRO	**0.0101**	1	1	0.0320 J (MW-136)
	TPH DRO	**0.0858**	1	1	0.0873 JB (MW-136)

* Method detection limit exceeded CGWSL
J: Indicates an estimated value.
B: Analyte was also detected in the associated method blank.
V3: Biased high due to matrix interference

As shown in Table 4A, GRO and DRO were detected at concentrations in exceedance of the CGWSL during both 2020 semiannual events. As shown in the COC concentration plots included in Appendix D, DRO and GRO concentrations in cross-gradient and up-gradient wells are generally stable over time despite occasional fluctuations, with the following exceptions:

- GRO was detected above the method detection limit for the first time in up-gradient well UG-3R in June 2020 at 0.0421 J mg/L, which is above the CGWSL.
- GRO concentrations in cross-gradient well MW-136 increased from not detected above the method detection limit in April 2019 to 0.0731 JB mg/L in October 2019 to 0.326

Released to Imaging: 11/21/2023 10:16:55 AM

mg/L in June 2020, which is the historical maximum for this well, and decreased to 0.0320 J mg/L in October 2020. The anomalously high result in June 2020 is likely biased high, as the internal standard exhibited poor recovery due to sample matrix interference.

- DRO concentrations in cross-gradient well MW-136 increased from 0.0254 mg/L in October 2019 to 0.0924 J mg/L in June 2020 and 0.0873 JB mg/L in October 2020. The 2020 results were the first exceedances of the CGWSL since October 2017, but they were less than the historical maximum. The October 2020 result may be attributable to laboratory source contributions as DRO was detected in the associated laboratory method blank.

Volatile Organic Compounds, Areas Cross-Gradient and Up-Gradient of Refinery

In 2020, groundwater samples collected from the following cross-gradient and up-gradient wells during each semiannual event were analyzed for VOCs:

- First Semiannual Event (seven wells): KWB-13, MW-136, RA-3156, UG-1, UG-2, UG-3R, and UG-4.
- Second Semiannual Event (one well): MW-136.

No VOCs were detected above their respective CGWSL during either 2020 semiannual event, as shown in Table 4A. The 2020 VOC results for groundwater samples collected from cross-gradient and up-gradient wells were consistent with historical results, except in cross-gradient wells KWB-13 and MW-136, as follows:

- Benzene and ethylbenzene concentrations in KWB-13 increased from not detected above the method detection limits in April 2019 to 0.000205 J mg/L and 0.00234 J mg/L, respectively, in June 2020. However, the 2020 results were less than the method detection limits during previous events and are at least an order of magnitude below their respective CGWSL.
- MTBE was detected above the method detection limit for the first time in MW-136 in October 2020 at 0.000122 J mg/L, which is several orders of magnitude below the CGWSL.

Total Metals, Areas Cross-Gradient and Up-Gradient of Refinery

In 2020, groundwater samples were collected from the following cross-gradient and up-gradient wells during each semiannual event for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium) and the expanded metals list (boron, cadmium, cobalt, mercury, nickel, uranium, and vanadium):

- First Semiannual Event (six wells): KWB-13, MW-136, UG-1, UG-2, UG-3R, and UG-4.
- Second Semiannual Event (one well): MW-136

Released to Imaging: 11/21/2023 10:16:55 AM

Total metal results that exceeded their respective CGWSL in cross-gradient and up-gradient wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
Cross- & Up-Gradient	*First Semiannual Event (June 2020)*				
	Boron	**0.750**	6	1	1.02 (UG-4)
	Iron	**1.00**	7	1	4.41 (KWB-13)
	Uranium	**0.0300**	6	3	0.0639 (MW-136)
	Second Semiannual Event (October 2020)				
	Uranium	**0.0300**	1	1	0.0558 (MW-136)

As summarized above and highlighted in Table 4B, boron, iron, and uranium were detected in exceedance of their respective CGWSLs in cross-gradient and up-gradient wells during at least one 2020 sampling event. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater samples collected from cross-gradient and up-gradient wells were generally consistent with historical results, with the following exceptions:

- Arsenic, barium, cobalt, chromium, iron, lead, manganese, nickel, and vanadium concentrations increased over the four most recent sampling events conducted since April 2017. However, concentrations of all these metals except for iron remain below their respective CGWSL. Iron concentrations have historically exceeded the CGWSL in this well and have fluctuated across the facility.
- Uranium concentrations in UG-1 have increased slightly over the four most recent sampling events from 0.0262 mg/L in April 2017 to 0.0385 mg/L in June 2020. Uranium exceeded the CGWSL of 0.0300 mg/L in April 2019 and June 2020.

Concentrations of target COC arsenic in cross-gradient and up-gradient wells are overall stable despite occasional fluctuations, as shown in the COC concentration plots included in Appendix D.

Cyanide, Areas Cross-Gradient and Up-Gradient of Refinery

Cyanide was not detected above the CGWSL in groundwater samples collected from cross-gradient and up-gradient wells during either 2020 semiannual event.

Water Quality Parameters, Areas Cross-Gradient and Up-Gradient of Refinery

In 2020, groundwater samples were collected from the following cross-gradient and up-gradient wells during each semiannual event for analysis of water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite [as nitrogen]):

- First Semiannual Event (seven wells): KWB-13, MW-136, RA-3156, UG-1, UG-2, UG-3R, and UG-4.

Released to Imaging: 11/21/2023 10:16:55 AM

- Second Semiannual Event (one well): MW-136.

No CGWSLs are applicable for calcium, potassium, or sodium. Chloride, fluoride, nitrate/nitrite, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in cross-gradient and up-gradient wells, as highlighted in Table 4C. The reported concentrations of these constituents in 2020 were consistent with historical results, except nitrate/nitrite in cross-gradient well MW-136. Nitrate/nitrite concentrations in MW-136 increased from 2.38 mg/L in October 2019 to 13.2 mg/L in June 2020 to 14.4 mg/L in October 2020, which is the historical maximum for this well and the first exceedance of the CGWSL since April 2018.

5.3.9 RO Reject Fields – Analytical Results

The reject water from HFNR's RO system was historically discharged to agricultural fields located north of the refinery in accordance with the Discharge Permit, but discharge ceased in January 2019. These areas are referred to as the North and South RO Reject Fields. Groundwater samples were collected from the following six wells during both 2020 semiannual events:

- North RO Reject Field wells: MW-117, MW-118, and MW-119
- South RO Reject Field wells: MW-114, MW-115, and MW-116

Groundwater samples collected from these wells were all analyzed for GRO, DRO, the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium), and water quality parameters (calcium, chloride, fluoride, potassium, sodium, sulfate, TDS, and nitrate/nitrite).

Analytical results of groundwater samples collected from RO Reject Field wells in 2020 indicate COCs are present in groundwater above their respective CGWSLs, as highlighted in Tables 4A through 4C and discussed in the following subsections.

Total Petroleum Hydrocarbons – Diesel Range Organics and Gasoline Range Organics, RO Reject Discharge Fields

In 2020, groundwater samples were collected from wells located in and near the RO Reject Discharge Fields for analysis of TPH DRO and GRO. TPH results that exceeded their respective CGWSL in RO Reject Field wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
North & South RO Fields	*First Semiannual Event (June 2020)*				
	TPH-DRO	**0.0858**	6	3	0.436 (MW-114)
	Second Semiannual Event (October 2020)				
	TPH-DRO	**0.0858**	6	5	0.663 (MW-114)

As summarized above and highlighted in Table 4A, DRO was detected in exceedance its CGWSL in RO Reject Field wells sampled during both 2020 semiannual events.

Released to Imaging: 11/21/2023 10:16:55 AM

As shown in the COC concentration plots included in Appendix D, DRO concentrations in RO Reject Field wells increased over at least one 2020 semiannual sampling event, as follows:

- DRO concentrations in North RO Reject Field wells MW-117 and MW-119 increased from not detected above the method detection limit to exceeding the CGWSL in both June and October 2020. DRO concentrations in MW-117 increased from not detected above the method detection limit in October 2019 to 0.109 mg/L in June 2020 and then decreased slightly to 0.0997 JB mg/L in October 2020. The DRO results in MW-117 during the 2020 events were less than the historical maximum. DRO concentrations in MW-119 increased from not detected above the method detection limit in October 2019 to 0.376 mg/L in June 2020, which is the historical maximum concentration for this well. DRO concentrations then decreased slightly to 0.215 B mg/L in October 2020. However, the reported concentrations in MW-117 and MW-119 in October 2020 may be attributable to laboratory contributions as DRO was detected in the associated laboratory method blanks.
- DRO in well North RO Reject well MW-118 increased from not detected above the method detection limit in June 2020 to 0.0817 JB mg/L in October 2020, which is the historical maximum reported for this well. However, the reported increase is likely attributable to laboratory contributions as DRO was detected in the associated laboratory method blank.
- DRO concentrations in South RO Reject Field wells MW-114 and MW-115 increased from not detected above the method detection limit or below the CGWSL to exceeding the CGWSL in both June and October 2020 (MW-114) or October 2020 (MW-115). DRO concentrations in MW-114 increased from 0.0374 J mg/L in October 2019 to 0.436 mg/L in June 2020 to 0.663 mg/L in October 2020, which is the historical maximum for this well. DRO concentrations in MW-115 increased from not detected above the method detection limit in October 2019 to 0.0430 J mg/L in June 2020 to 0.222 B mg/L in October 2020, which is the historical maximum for this well. However, the reported increase in MW-115 in October 2020 is likely attributable to laboratory contributions as DRO was detected in the associated laboratory method blank.
- DRO concentrations in South RO Reject Field well MW-116 continue to fluctuate above and below the CGWSL.

GRO was not detected in any RO Reject Field well above the method detection limit in either 2020 semiannual event.

Volatile Organic Compounds, RO Reject Discharge Fields

VOCs were not detected above their respective CGWSLs in the six RO Reject Field wells sampled during both 2020 semiannual events. The 2020 VOC results in RO Reject Field wells are consistent with historical results, with the following exceptions:

- MTBE was detected for the first time above the method detection limit in June 2020 and October 2020 in North RO Reject Field well MW-117; however, concentrations remain two orders of magnitude below the CGWSL. MTBE concentrations increased from not

Released to Imaging: 11/21/2023 10:16:55 AM

detected above the method detection limit in October 2019 to 0.000222 J mg/L in June 2020 to 0.00195 mg/L in October 2020.

- MTBE was detected for the first time above the method detection limit in June 2020 and October 2020 in South RO Reject Field wells MW-114 and MW-115; however, concentrations remain at least one order of magnitude below the CGWSL. In well MW-114, MTBE concentrations increased from not detected above the method detection limit in October 2019 to 0.00475 mg/L in June 2020 to 0.0112 mg/L in October 2020. In well MW-115, MTBE concentrations increased from increased from not detected above the method detection limit in October 2019 to 0.00126 mg/L in June 2020 to 0.00364 mg/L in October 2020.

Total Metals, RO Reject Discharge Fields

Groundwater samples were collected from wells located in the North and South RO Reject Fields for analysis of the standard total metals list (arsenic, barium, chromium, iron, lead, manganese, and selenium). Total metal results that exceeded their respective CGWSL in North and South RO Reject Field wells are summarized in the table below:

Area	Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells > CGWSL	Max. Concentration mg/L (Well)
North & South RO Fields	*First Semiannual Event (June 2020)*				
	Manganese	**0.200**	6	1	0.980 (MW-114)
	Second Semiannual Event (October 2020)				
	Manganese	**0.200**	6	1	0.925 (MW-114)

As summarized above and highlighted in Table 4B, manganese was detected in exceedance of its CGWSLs in RO Reject Field wells in one well during both 2020 semiannual events. No other total metal was detected above its respective CGWSL during either semiannual event.

The 2020 analytical results of total metals in groundwater samples collected from RO Reject Field wells were consistent with historical results. Concentrations of target COC arsenic in RO Reject Field wells are overall stable, as shown in the COC concentration plots included in Appendix D.

Cyanide, RO Reject Discharge Fields

Groundwater samples collected from RO Reject Field wells in 2020 were not analyzed for cyanide.

Water Quality Parameters, RO Reject Discharge Fields

Chloride, fluoride, sulfate, and TDS were detected at concentrations in exceedance of their respective CGWSLs in groundwater samples collected from some RO Reject Field wells, as highlighted in Table 4C. The reported concentrations of these constituents in 2020 were generally consistent with historical results. No CGWSLs are applicable for calcium, potassium, or sodium. The 2020 results of these analytes were consistent with historical results.

Released to Imaging: 11/21/2023 10:16:55 AM

5.3.10 Semi Volatile Organic Compounds

In accordance with the SWMU/AOC Group 3 Rev 2 transmittal letter dated December 28, 2018, and NMED's subsequent response letter dated March 22, 2019, groundwater samples from select wells in the vicinity of SWMUs 20 and 22 (North Refinery and TEL wells) were analyzed for SVOCs by EPA Method 8270.

The two required rounds of SVOC analysis were scheduled to be completed during the 2019 semiannual events for wells that are sampled semiannually (MW-23, MW-43, MW-61. MW-62, MW-97, MW-137. MW-138, and TEL-4) and during the first semiannual events in 2019 and 2020 for wells that are sampled annually (MW-93, MW-95, RW-2R). Due to the presence of PSH at thicknesses ≥0.03 feet, groundwater samples were not collected from the following wells in at least one event in 2019 and were to be collected in 2020 in order to satisfy the required two rounds of SVOC sample collection: MW-97, MW-137, MW-138, and RW-2R. However, PSH was measured at a thickness ≥0.03 feet in wells MW-137, MW-138, and RW-2R during both 2020 semiannual events and groundwater samples were not collected for SVOC analysis from these wells. Well MW-97 was not sampled during the first 2020 semiannual event due to the presence of PSH at a thickness ≥0.03 feet and could not be located to gauge or sample during the second 2020 semiannual event due to construction in the area.

Groundwater samples were collected from wells listed below near SWMU 20 and SWMU 22 (North Refinery and TEL wells) during the first 2020 semiannual event for analysis of SVOCs.

- First Semiannual Event (two wells): MW-93 and MW-95.

No groundwater samples were collected for SVOC analysis during the second 2020 semiannual event. SVOC results that exceeded their respective CGWLs are summarized below:

Analyte	CGWSL (mg/L)	No. Wells Sampled	No. Wells >CGWSL	Max. Concentration mg/L (Well)
First Semiannual Event (June 2020)				
1-Methylnaphthalene	0.0300	2	1	0.0340 (MW-93)

As summarized above and highlighted in Table 4D, 1-methylnaphthalene was detected in exceedance of its CGWSLs during the first 2020 semiannual sampling event. No other SVOC was detected above its respective CGWSL.

SVOC sampling will be conducted during the April 2021 sampling event from wells MW-97, MW-137, MW-138, and RW-2R if PSH is not present at thicknesses ≥0.03 feet. All SVOC results will be evaluated in 2021 and recommendations for any future SVOC analysis will be provided in the 2021 annual update to the FWGMWP in June 2021.

5.3.11 Ethylene Dibromide (EDB)

In accordance with the SWMU/AOC Group 3 Rev 2 transmittal letter dated December 28, 2018, and NMED's subsequent response letter dated March 22, 2019, groundwater samples collected from wells with historical detections of 1,2-dichloroethane were analyzed for EDB by EPA Method 8011 in 2019. EDB was analyzed in groundwater samples collected from nine wells

Released to Imaging: 11/21/2023 10:16:55 AM

during one of the 2019 semiannual sampling events and was not detected in any well. Monitoring well KWB-6 had historical detections of 1,2-dichloroethane but was not sampled in 2019 or 2020 due to the presence of PSH at a thickness ≥0.03 feet. Groundwater samples collected from well KWB-6 will be analyzed for EDB in 2021.

Released to Imaging: 11/21/2023 10:16:55 AM

Received by OCD: 6/23/2021 4:05:29 PM

6.0 Remediation System Monitoring

The PCC Permit and Discharge Permit both require recovery of PSH present in the shallow groundwater within and adjacent to the refinery. PSH and impacted groundwater are continually recovered at the refinery from a system of recovery trenches and recovery wells. Additionally, PSH is manually recovered from wells not connected to the recovery system on a periodic basis. A summary of the recovery system, manual recovery activities, and recovery results are summarized in this section.

6.1 Recovery System

The system described below only includes the recovery wells/trenches that have infrastructure installed. Recovery trenches associated with wells RW-9, RW-10, RW-16, RW-17, and RW-18 have not been observed to contain measurable PSH and thus have never been included in a recovery system. RW-11 and RW-12R have not had any measurable PSH since the upgraded system was installed in 2012.

The recovery system consists of automated pumping of PSH and groundwater from recovery wells using dedicated groundwater and PSH pumps (both types of fluid pumps installed in each well). Pumps are installed, operated, and removed from each well based on PSH thicknesses and observed recovery during operation and maintenance (O&M) activities. The pumps are typically operated automatically, with remote data sensing and recording. Recovered PSH is pumped into centralized holding tanks, then pumped to Tank 49, associated with the wastewater treatment system, which then transfers the product to crude tank(s) (Tank 1225 or 437) for processing within the refinery. Recovered groundwater is pumped to the nearest process wastewater sump and directed to the process wastewater treatment system. Thus, recovered PSH is recycled into the refinery process while groundwater is treated to remove residual hydrocarbons.

O&M of the recovery system was conducted throughout 2020 on an approximate weekly basis. O&M activities included gauging recovery wells RW-1R, RW-2R, RW-4R, RW-5R, RW-6R, RW-7R, RW-8R, RW-12R, RW-13R, RW-14R, RW-15, RW-19, RW-20, and RW-22 in order to assess the effectiveness of the recovery system and to determine in which wells to install and operate PSH and groundwater pumps. Recovery system gauging results measured during 2020 O&M activities area summarized in Appendix F. Measurable PSH was not observed in RW-4R and RW-12R during 2020.

6.2 Manual Recovery

PSH was manually removed by bailing or pumping from wells in the Field East of Refinery and South Refinery areas on a periodic basis in 2020. These wells included KWB-8, KWB-10R, MW-111, MW-112, MW-127, MW-128. MW-131, MW-132, and MW-133 in the Field East of Refinery and KWB-4, KWB-5, KWB-6, and MW-107 in the South Refinery. Gauging and manual recovery results are summarized in Table 6.

Released to Imaging: 11/21/2023 10:16:55 AM

Absorbent socks were also installed and replaced throughout 2020 in various area wells including MW-64, MW-65, MW-85, MW-86, MW-99, NCL-34A, KWB-4, KWB-7, KWB-8, KWB-11B, RW-17A, RW-17G, and TEL-3.

6.3 Estimated Volume of Fluids Recovered

Volumes of groundwater and PSH recovered by the recovery system during 2020 are summarized in Table 5 and additional recovery details are provided in Appendix F. An estimated 4,375,556 gallons of groundwater and an estimated 224,098 gallons of PSH were recovered through operation of the automated recovery system in 2020. The majority of recovered PSH during 2020 was from RW-14R (115,839 gallons) and RW-22 (33,299 gallons). Significant volumes of PSH (greater than 5,000 gallons) were also recovered from wells RW-1R, RW-5R, RW-6R, RW-7R, RW-8R, and RW-13R.

Volumes of PSH and groundwater manually recovered during 2020 are summarized in Table 6. An estimated 102 gallons of PSH and 168 gallons of groundwater were manually recovered in 2020. .

Released to Imaging: 11/21/2023 10:16:55 AM

7.0 Conclusions

Conclusions based on the results of groundwater monitoring and remedial activities conducted during 2020 and comparison to historical results are discussed below.

Groundwater flow direction was generally consistent with previous monitoring events with flow predominantly east beneath the refinery and southeast beneath the EPs towards the Pecos River. Localized groundwater sinks are occasionally observed around various recovery wells due to active pumping of groundwater. Mounding at the RO reject fields continues despite cessation of discharge of RO reject water to the RO Reject Fields in January 2019.

The presence and distribution of PSH were generally consistent with previous monitoring results, with some fluctuations. PSH thicknesses across all areas of interest are overall stable to declining over time, with the exception in select wells (KWB-10R, MW-112, MW-127, and MW-128, MW-137, MW-138) located in the Field East of Refinery and North Refinery that are attributed to reductions in groundwater elevations. PSH thicknesses are inversely affected by fluctuations in groundwater elevations, which have generally decreased between 2017 and 2020. Historical minimum groundwater elevations were observed in October 2020 in most of the wells where PSH thicknesses increased during 2020.

Concentrations of COCs in groundwater have generally remained stable over time, although increasing trends were noted in select wells in specific areas of interest. The limited number of increasing COC concentration trends observed since approximately 2011-2014 have generally exhibited stabilizing trends over the most recent sampling events. During 2020 and previous years, the following COCs were detected in groundwater at concentrations in exceedance of their respective CGWSL:

- TPH GRO and DRO
- Select VOCs including target COCs benzene, toluene, ethylbenzene, xylenes, MTBE, and naphthalene
- Select total metals including target COC arsenic
- Water quality parameters chloride, fluoride, sulfate, TDS, and nitrate/nitrite

SVOCs were also detected in groundwater at concentrations in exceedance of their respective CGWLS in samples collected from select wells in the vicinity of SWMUs 20 and 22 (North Refinery wells). SVOC analysis was conducted in 2020 in accordance with the SWMU/AOC Group 3 Rev 2 transmittal letter dated December 28, 2018, and NMED's subsequent response letter dated March 22, 2019.

It should be noted that many of the concentrations of inorganic COCs (manganese, chloride, fluoride, nitrate/nitrite, sulfate, and TDS) depicted as "exceedances" in this report may actually be similar to and reflective of background groundwater concentrations, as detailed in the background evaluation that was submitted to NMED and OCD in September 2015 (Arcadis 2015b).

Released to Imaging: 11/21/2023 10:16:55 AM

The PSH and groundwater recovery system operated throughout 2020. An estimated 4,375,556 gallons of groundwater and an estimated 224,098 gallons of PSH were recovered through operation of the automated recovery system in 2020.

According to the requirements of the updated PCC Permit, an updated FWGMWP will be submitted in June 2021.

Released to Imaging: 11/21/2023 10:16:55 AM

Notes:

[1] Wells screened in the shallow water-bearing zone are typically screened at depths ranging between 5 and 35 ft bgs. The shallow water-bearing zone varies between confined and unconfined conditions. Wells screened in the valley fill zone are typically screened at depths ranging between 35 and 70 ft bgs. The clay lens separating the shallow and valley fill zones is discontinuous in some locations resulting in connectivity between the two zones.

[2] Water elevations corrected for PSH, if present, using a specific gravity of 0.8.

[3] Well not located.

[4] Well converted to flush-mount; new survey data from 9/30/2020.

[5] PSH not measured due to pump interference.

[6] Only PSH present in well.

Definitions:

ft = feet

-- = not applicable

amsl = above mean sea level

bgs = below ground surface

btoc = below top of casing

NCL = North Colony Landfarm

TEL = Tetra Ethyl Lead Surface Impoundment

unknown = screen interval not readily availble

TMD = Three Mile Ditch

PSH = phase separated hydrocarbons

RO = Reverse Osmosis

NM = not measured

TMD = Three Mile Ditch

TOC = Top of Casing

[1] **Purge Methods:**

Low Flow = peristaltic pump with dedicated tubing, purged until parameters stabilized

Bladder = bladder pump with dedicated tubing, purged until parameters stabilized

Grab = irrigation well sample collected from tap or valve

Definitions:

°C = Degrees Celsius

DO = Dissolved Oxygen

mg/L = milligrams per liter

mV = milliVolts

ORP = oxidation/reduction potential

S/m = Siemens per meter

std units = standard pH units

[2] **Potential Explanations of Water Quality Observations:**

"Odor" likely due to the presence of petroleum hydrocarbons

"Cloudy water" likely due to presence of suspended inorganic particles (silt, clay)
Dark, black, brown, yellow, gold, gray, orange, and "rusty" tints likely due to suspended clay/silt particles or microbial activity

"Particles" of varying color likely due to suspended clay/silt particles

"Orange algae" likely due to microbial activity

Table 3 - Groundwater Screening Levels and Selected Critical Groundwater Screening Levels

2020 Annual Groundwater Monitoring Report
HollyFrontier Navajo Refining LLC, Artesia Refinery, Artesia, New Mexico

Analyte	WQCC GW Human Health (20.6.2.3103.A)	WQCC GW Domestic (20.6.2.3103.B)	WQCC GW Irrigation (20.6.2.3103.C)	USEPA MCL	NMED Tap Water (Table A-1)	USEPA Tap Water	NMED TPH (Table 6-4)	CGWSL	CGWSL Source
Other Parameters (mg/L, unless noted otherwise)									
Uranium	3.00E-02			3.00E-02				3.00E-02	WQCC GW Human Health (20.6.2.3103.A)
Polychlorinated Biphenyls	5.00E-04			5.00E-04				5.00E-04	WQCC GW Human Health (20.6.2.3103.A)

Definitions and Notes:

Blank cell indicates no standard is available

CGWSL = Critical Groundwater Screening Level

Heirarchy of selecting the CGWSL is as follows:

1. Lowest of either NM WQCC GW Standard (20.6.2.3103) or USEPA MCL.
2. If no NM WQCC GW Standard or USEPA MCL available, NMED Tap Water value.
3. If no NMED Tap Water value, USEPA Tap Water value, if available.
4. NMED TPH screening for "unknown oil" used for TPH-DRO.
5. NMED TPH screening value for "Diesel #2/New Crankase Oil" applied to TPH DRO samples collected from Evaporation Ponds.

NMAC = New Mexico Administrative Code

NMED = New Mexico Environment Department

NMED Tap Water = NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1, Tap Water Screening Level

NMED TPH = NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table 6-4, TPH Groundwater Screening Levels

mg/L = Milligrams per Liter

pCi/L = PicoCuries per Liter

SVOC = Semivolatile Organic Compound

TPH = Total Petroleum Hydrocarbons

USEPA MCL = United States Environmental Protection Agency Maximum Contaminant Level from "Regional Screening Level (RSL) Summary Table", November 2020

USEPA Tap Water = United States Environmental Protection Agency Tap Water Screening Level from"Regional Screening Level (RSL) Summary Table", November 2020

VOC = Volatile Organic Compound

WQCC = New Mexico Water Quality Control Commission

WQCC GW Domestic = WQCC groundwater standard for domestic exposure, 20.6.2.3103.B NMAC

WQCC GW Human Health = WQCC groundwater standard for human health exposure, 20.6.2.3103.A NMAC

WQCC GW Irrigation = WQCC groundwater standard for irrigation exposure, 20.6.2.3103.C NMAC

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.
---	No applicable CGWSL.

Abbreviations

1,2,4-TMB	1,2,4-Trimethylbenzene
1,3,5-TMB	1,3,5-Trimethylbenzene
CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
cis-1,2-DCE	cis-1,2-Dichloroethene
DRO	Diesel Range Organics
DRO-EP	Diesel Range Organics data from wells located in the Evaporation Ponds area
Dup	Duplicate sample
FD	Field duplicate sample
GRO	Gasoline Range Organics
mg/L	Milligrams per Liter
MTBE	Methyl Tert-Butyl Ether
NMED TPH	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table 6-4 TPH Groundwater Screening Level
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1 Tap Water Screening Level
TCE	Trichloroethene
TPH	Total Petroleum Hydrocarbons
USEPA TW	United States Environmental Protection Agency Tap Water Screening Level, "Regional Screening Levels (RSL) Summary Table", November 2020
WQCC Dom	NMED Groundwater standard for domestic water supply, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
Q	Sample was prepared and/or analyzed past recommended holding time.
V3	Internal standard exhibited poor recovery due to sample matrix interference; analytical result biased high.

Released to Imaging: 11/21/2023 10:16:35 AM

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
NMED TW	NMED Risk Assessment Guidance for Site Investigations and Remediation, February 2019, Rev 2 (6/19/19), Table A-1, Tap Water Screening Level
WQCC Dom	NMED Groundwater standard for domestic exposure, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC
WQCC Irr	NMED Groundwater standard for irrigation exposure, 20.6.2.3103.C NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Released to Imaging: 11/21/2023 10:16:33 AM

Definitions

X	Reported concentration, X, exceeds the CGWSL.
X	Analyte detected above the detection limit at a concentration equal to X.
<x	Analyte not detected at detection limit equal to x.
<x	Analyte not detected at detection limit equal to x, but x exceeds the CGWSL.
	Blank cell indicates a sample was collected from the well during the indicated sampling event, but the analyte was not analyzed.
---	No applicable CGWSL.

Abbreviations

CGWSL	Critical Groundwater Screening Level (see Table 3)
CGWSL Source	Source for CGWSL value (see Table 3)
Dup	Duplicate sample
FD	Field duplicate sample
mg/L	Milligrams per Liter
WQCC Dom	NMED Groundwater standard for domestic exposure, 20.6.2.3103.B NMAC
WQCC HH	NMED Groundwater standard for human health exposure, 20.6.2.3103.A NMAC

Lab Footnote

B	Analyte was also detected in the associated method blank.
J	Indicates an estimated value.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference
P1	Relative percent difference value not applicable for sample concentrations less than 5 times the reporting limit.
Q	Sample was prepared and/or analyzed past recommended holding time.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Empty, or blank, cells indicate that a data observation was not reported.

*Ground Cover: 1=Grass; 2=Fallow; 3=Bare Ground; 4=Brome grass; 5=Sod; 6=Straw mulch; 7=Grass muck; 8=Bare muck; 0=Unknown

"s" This data value failed one of NCDC's quality control tests. "At Obs." = Temperature at time of observation

"T" values in the Precipitation or Snow category above indicate a "trace" value was recorded.

"A" values in the Precipitation Flag or the Snow Flag column indicate a multiday total, accumulated since last measurement, is being used.

Data value inconsistency may be present due to rounding calculations during the conversion process from SI metric units to standard imperial units.

Ms. Julie Speer, P.G.
Project Manager
TRC
505 East Huntland Drive, Suite 250
Austin, Texas 78752

Subject: June 2020 (Spring) Groundwater Monitoring Event
Sitewide Gauging – June 15-16, 2020
Groundwater Sampling – June 15-19, 2020
Navajo Refining Company, Artesia, New Mexico

Dear Ms. Speer:

This document summarizes groundwater monitoring field activities conducted by Hydrologic Monitoring, LLC (HMI) on behalf of TRC at the Navajo Refining Company, Artesia Refinery, Artesia, New Mexico.

Contents

Field Activities Narrative
Table 1: (Gauging Data, GW Field Parameters, Well Inspections, & Analytical Program)
Groundwater Sampling SOP Memo
Daily Job Hazard Analysis (JHA) forms
Groundwater Sampling Forms and Field Instrument Calibration Log
(three (3) emails - forms in order of field-strategy shown in Table 1)
Chain-of-Custody Forms (one email)

Field Activities Narrative

1. Historically conducted in April, the 1H20 event was delayed until June, due to COVID 19 concerns. HMI conducted the *June 2020 (Spring) Groundwater Monitoring Event* (i.e., "SA" and "A" designations, only, in Table 1). Sitewide gauging was conducted June 15-16**,** 2020. Groundwater sampling (142 wells sampled) was conducted June 15-19**,** 2020.

2. Groundwater sampling was conducted in accordance with the Site Sampling and Analysis Plan, EPA guidance, and the attached Memorandum - Low-Flow Groundwater Monitoring Standard Operating Procedures, Navajo Refining Co. - Artesia, New Mexico. Per regulatory request, if measured LNAPL thickness was *less than* 0.03 feet, in any well scheduled for groundwater sampling, LNAPL was removed, and the well was sampled. If LNAPL thickness was equal to, or greater than 0.03 feet, in any well scheduled for sampling, the well was not sampled. Gauging data, groundwater field parameters, and well inspection information is summarized in Table 1. Samples were shipped overnight FedEx, to Pace National, Mt. Juliet, TN. The groundwater sampling process is documented on the attached groundwater sampling forms.

3. Field QA/QC Sampling (per Refinery Area):

   <u>Evaporation Ponds</u>
   Duplicates:
   Dup-EP-01 at MW-7A
   Dup-EP-02 at MW-22A
   Dup-EP-03 at MW-3
   Equipment Blanks:
   EB-EP-01 collected over decontaminated gauging probe after sampling at MW-74
   EB-EP-02 collected over decontaminated gauging probe after sampling at MW-124
   EB-EP-03 collected over decontaminated gauging probe after sampling at MW-5A
   EB-EP-04 collected over decontaminated gauging probe after sampling at MW-79
   Trip Blank-EP-01 (…this intended ID was inadvertently labeled as Trip Blank-EP-04)
   Trip Blank-EP-02
   Trip Blank-EP-03
   Trip Blank-EP-04

   <u>NCL</u>
   Duplicate:
   Dup-NCL-01 at NCL-49
   Equipment Blank:
   EB-NCL-01 collected over decontaminated gauging probe after sampling at NCL-32
   Trip Blank-NCL-01

   <u>TMD</u>
   Trip Blank-TMD-01

TEL
Duplicate:
Dup-TEL-01 at TEL-4
Equipment Blank:
EB-TEL-01 collected over decontaminated gauging probe after sampling at TEL-2
Trip Blank-TEL-01

REST ("rest" of the site)
Duplicates:
Dup-REST-01 at MW-113
Dup-REST-02 at MW-104
Dup-REST-03 at MW-134
Dup-REST-04 at MW-60
Dup-REST-05 at KWB-12B
Equipment Blanks:
EB-REST-01 collected over decontaminated gauging probe after sampling at MW-113
EB-REST-02 collected over decontaminated gauging probe after sampling at MW-104
EB-REST-03 collected over decontaminated gauging probe after sampling at MW-134
EB-REST-04 collected over decontaminated gauging probe after sampling at MW-60
EB-REST-05 collected over decontaminated gauging probe after sampling at KWB-12B
Trip Blank-REST-01
Trip Blank-REST-02
Trip Blank-REST-03
Trip Blank-REST-04

4. Notes:

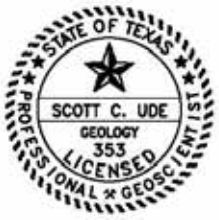
1H20: Per TRC, Pace chain-of-custodies, reference PO # 150726

TRC notes from March 2020:
HMI's daily JHA forms to be included in deliverables package.
Email TRC "Estimated Field Hours" table, pre-event; follow with "Actual Field Hours" table, post-event.
MW-101 recompleted at-grade (due to inside-plant construction) (photo sent to TRC).
MW-129 recompleted at-grade (due to new asphalt loading rack) (photo sent to TRC).
MW-53 (well lost to road construction, was not yet replaced with new well "MW-53R", at 1H20 event).
Irrigation wells may experience upcoming changes, per TRC (TBD, replacements, etc.)
Renewed well-access to the Joy farm property may be upcoming, TBD, per TRC.

Training modules: "24HFNAV HOLLYFRONTIER SITE SPECIFIC ORIENTATION ARTESIA-NM", and an additional "LPS" module – both @ HASC, annually (December-cycle). HMI's DISA 2-yr backgound check/drug/alcohol requirements approved by safety-trailer personnel on 10-3-17 (updated 2019), as reported through HASC system; HMI will maintain its access status.

Per Navajo, purgewater is disposed in the pad sump (inside, then to the left of Main Gate entrance). Alternately, North Bundle Pad sump (fenced area of drums, etc.), notifying FCC control room prior to entrance.
Sitewide well and gate lock combinations: "2-0-1-3" (less often "2-0-0-2").
With suggested telephone notification, FedEx pickup from locked shed (35-25-39 combination) no earlier than approximately 14:00 daily, located across from Artesia Wool Co (access shed-area from "inside" Refinery).
North side of Hwy 82, east of site, gate with cable and combination lock (8810).
POTW bldg, check-in as needed, to borrow a key or get gate unlocked.
HMI borrows Navajo key sets for "Evaporation Ponds" & "TEL" at permitting (return keys upon event completion, each event). Navajo's Mr. Robert Combs, Randy Dade, Richard Orosco, for daily safety review and permit-issuing per team member (typically 8-10 HMI team-members).

Navajo completed well surface completion upgrades in a phased-approach, beginning 2018. HMI's well inspections are documented on respective well gauging and sampling forms. Well inspection items of potential concern (i.e., "Issues") are highlighted in yellow color (see Table 1).



HMI appreciates the opportunity to assist TRC with this project. If you have any questions or would like additional information please feel free to call us at 713.464.5206.

Sincerely,

HYDROLOGIC MONITORING

Scott C. Ude

S = South
SA = Semi-annual (Mar/Apr and Sep/Oct events)
SE = Southeast
SW = Southwest
TMD = Three Mile Ditch
TEL = Tetra Ethyl Lead Impoundment
UG = Upgradient
US285 = U.S. Highway 285
US82 = U.S. Highway 82
VOC = Volatile Organic Compounds
W = West
Y = Yes

= Sampled as part of RO Field Program, 4Q19

Footnotes:

[a] Well const. info. provided where available. TOC & ground surface elevs relative to benchmark G-416. Total depth based on 4/2010 measurements.

[b] PSH was present during March 2012 gw monitoring event or a recovery pump is in place. Note that recovery wells are gauged at least monthly.

[c] Analytical Suite to include the following:

1. Purge parameters to be measured and recorded in the field will include pH, temp, spec. cond., diss. oxy., and oxidation-reduction potential.
2. DRO by Method 8015Mod.
3. GRO by Method 8015Mod.
4. VOCs by Method 8260, to include methyl tert butyl ether (MTBE).
5. Total metals by Method 6010/6020 and/or 7470. Specific metals shown in heading, abbreviations from periodic chart (incl B, Cd, Co, U, per 3-7-16 State request).
6. Dissolved metals - same list as total metals but only analyzed during April event (field filtered by HMI)
7. Cyanide by Method SM4500.
8. Cations/anions to include Calcium, Potassium, and Sodium by Method 6010 or 6020 and Sulfate, Chloride and Fluoride by Method 300.
9. Nitrates/Nitrites as Nitrogen by Method 300.
10. Total Dissolved Solids by Method 2540C.

"-" indicates parameter not required.

Note - samples will not be collected from any well where PSH is measured to be 0.03 feet thick or greater.

[d] Samples to be collected at frequency indicated only if <0.03 feet of PSH is present.

[e] Recovery trenches 11, 15, 16, 17 and 18 have multiple vertical "wells". Gauging & sampling points are: RW #11-0, RW #15C, RW #16B, RW #17A and RW #18A.

= Well with recently gauged LNAPL (light nonaqueous phase liquid)

MW-53R (installed March 2020)replaced the formerly-destroyed MW-53, due to city road construction

Groundwater Monitoring Standard Operating Procedures
Navajo Refining LLC – Artesia, New Mexico

HMI conducts low-flow groundwater sampling in accordance with the site Sampling and Analysis Plan and EPA guidance (including Puls and Barcelona, 1996 EPA Guidance on Low-Flow Groundwater Sampling; REV No. 4, September 19, 2017, and Yeskis & Zavala, 2002, EPA/542:S-02/00, Groundwater Sampling Guidelines for Superfund and RCRA Project Managers).

Groundwater Sampling Methodology

HMI conducts low-flow groundwater sampling using a peristaltic pump and dedicated polyethylene tubing at wells with requisite depths-to-water. At a limited number of wells with depths-to-water greater than peristaltic range, low-flow groundwater sampling is conducted using dedicated or non-dedicated bladder pumps. In 2016, at no cost to TRC, HMI installed HMI-owned bladder pumps in a limited number of wells (approximately four). At such time that HMI no longer conducts routine groundwater monitoring at the site, it respectfully requests the opportunity to recover these dedicated bladder pumps. Sample intakes are set at midscreen, when possible (generally at least two feet from the base of the well). Sample intake depths are permanently marked, ensuring future sampling events consistently monitor the targeted water-bearing interval. During sampling with a peristaltic pump, the sample tube is attached to the pump using a one-foot section of dedicated, flexible silicone tubing (item #5703, Geotech Environmental Equipment, Inc.). A two-foot segment of polyethylene tubing connects the silicone tubing in the pump to the flow-through cell, using a disposable segment of silicone tubing. Purging commences through a sealed flow-through cell at EPA-recommended purge rates (generally 0.1 to 0.2 liters/minute), while well drawdown is monitored. Groundwater field parameter readings are measured at 0.5-liter intervals (generally an equivalent of one cell-volume "turnover"). Field parameters of pH, specific conductivity, temperature, dissolved oxygen, and oxidation-reduction potential are monitored inside the cell. Turbidity is monitored outside the cell. Groundwater field instrumentation is calibrated and recorded daily in accordance with manufacturer specifications.

Purging continues until a requisite volume of groundwater is purged (generally a minimum of 3,000 ml or six flow-through cell volumes), and field parameters have stabilized in accordance with EPA guidance:

Water Quality Parameters (Stabilization Parameters in Accordance with EPA (2002), Groundwater Sampling Guidelines for Superfund and RCRA Project Managers, Yeskis & Zavala, EPA/542:S-02/001)

- pH +/- 0.1 units;
- Temperature -
- Conductivity +/- 3%
- Dissolved Oxygen +/- 0.3 mg/L
- ORP +/- 10%
- Turbidity 10%

Immediately prior to sampling, the input tubing to the flow-through cell is disconnected from the disposable silicone receiving tubing on the input barb on the flow-through cell, and groundwater samples are collected directly into lab-supplied containers. Groundwater samples are placed in iced coolers, and remain in HMI's custody until shipped to ESC Lab Sciences via FedEx-overnight. Peristaltic tubes and/or dedicated bladder pumps may be dedicated in respective wells. Alternatively, dedicated tubing may be retrieved, bagged, labeled, and stored in tubs maintained at HMI. Wells with very limited water column thicknesses may be sampled with disposable bailers. Active recovery well and irrigation wells are sampled using sample ports. The purging and sampling process is documented on groundwater sampling field forms.

Cross-Contamination Prevention Program

Dedicated peristaltic tubing and dedicated bladder pumps are used as possible, to minimize any potential cross-contamination issues during the groundwater monitoring process. Remaining non-dedicated equipment (e.g., electronic gauging probes or non-dedicated bladder pumps, etc.) is properly decontaminated prior to use and between wells. The decontamination procedure may include a combination of chemical and mechanical decontamination. For example, scrubbing with ethyl alcohol (isopropanol) as warranted, followed by scrubbing using an Alconox-water solution, and distilled water rinse. The decontamination procedure for non-dedicated bladder pumps consists of cycling an Alconox-water solution through the pump bladder. Distilled water is cycled through the pump bladder, followed by decontaminating the exterior body of the pump, using the methods outlined above.

HMI Deliverables

HMI provides field documentation of groundwater monitoring activities in a deliverables package that includes a brief narrative, summary table (with gauging data, field parameters, well inspection data, and required analytical scope), groundwater sampling forms, field instrument calibration log, and chain-of-custody forms (by Refinery "Area"), and a groundwater sampling SOP memo.

HMI Groundwater

HYDROLOGIC MONITORING
JOB HAZARD ANALYSIS

Activity: Groundwater Sampling	**Date:** 6/16/20 6/17/20
	Project: Navajo-Artesia GW Samp.
Description of the work: Collect fluid level information and water samples from monitoring wells. NOTE: All site workers have STOP WORK Authorization at any time site conditions change and/or become unsafe	**Site Supervisor:** Scott Ude Scott Ude Scott Ude **Attendees Signatures:** Scott Ude Scott Ude Scott Ude

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
• General Hazards	• Accidents due to lack of training	• All workers will complete Safety Council Basic Plus Training and all site-specific training. • All workers will complete OSHA 40-hr HAZWOPER training with yearly updates. • Workers will be trained prior to performing new activities. • Tailgate safety meetings will be held daily.
	• Head Injury	• ANSI-approved hard hats will be worn at all times, in the manner they were designed (brim forward, no modifications no ball caps, etc.) Bump hats and Cowboy hard hats are not permitted.
	• Hearing Damage	• Workers will wear hearing protection whenever voices must be raised above normal conversational speech or when noise levels exceed 85 decibels due to loud noise sources such as working near heavy equipment.
	• Hand Injury	• Leather gloves will be worn when handling

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
		sharp, rough, or slippery surfaces. • Appropriate gloves for chemicals will be worn per project HASP.
	• Injuries resulting from manual lifting	• Workers will be instructed in safe lifting techniques (keep back straight, bend at knees, keep load close to body, lift smoothly, and do not twist at the waist. • Split heavy loads into smaller loads when possible. • Stretch before doing task • Make sure the path of travel is clear prior to the lift.
	• Foot Injury	• Workers will wear sturdy leather safety-toed boots that reach the ankle at all times. • For wet conditions or for chemical hazards proper water resistant overboots or chemical resistant safety-toed boots must be worn.
	• Eye Injury	• Workers will wear protective eyewear with sideshields that meet ANSI Z-87 at all times. If the worker wears prescription eyeglasses they must meet the same criteria or wear ANSI Z-87 safety over glasses. • Workers must have immediate access to Chemical monogoggles. Retaining rings are not permitted.
	• Slips, trips, and falls	• Walking/working surfaces will be kept free of clutter, debris, and congestion to the greatest extent possible. • Personnel should be aware of wet/muddy surfaces and use caution. Use caution when traversing uneven ground.
	• Injuries associated with insects, snakes, spiders, alligators, and poisonous plants	• Workers will wear snake chaps, leggings or sturdy rubber knee high boots when walking in uncleared, grassy areas. • Workers will avoid walking in areas where snakes or alligators may hide. Always look ahead where you are walking for signs of either. Use caution when moving or lifting objects that could be used for cover. Never reach under or behind objects, or into other areas where snakes or alligators may hide. • Workers will use insect repellant for all types of biting / stinging insects. Use care when opening wells to avoid bites and / or stings. • Workers will always use the buddy system and have a means of contacting emergency

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
		aid if needed by cell phone or Radio. • Workers will immediately wash any areas that were exposed to poisonous plants.
	• Chemical Exposure	• MSDS will be kept onsite in a location that all workers can access. • All workers must know where the emergency rally point is located when an evacuation alarm sounds in the plant. • Workers will sign in and out when they arrive and leave the work area.
	• Heat Stress	• All workers will take routine breaks in a cool, shaded area. • Workers will drink plenty of water throughout the day. • Workers will decrease intake of coffee and caffeinated soft drinks during working hours.
	• Vehicle accidents	• All vehicles must be inspected for safe operation onsite. • Vehicle operators must have a valid driver's license and will be instructed in safe operations while on the site. • Seat belts will be worn by all occupants. • When backing, use the buddy system or get out and look at position of objects. • All vehicles must contain a fire extinguisher, first aid kit, evacuation map, and route to hospital (map/directions). • Drivers will observe and not exceed posted plant speed limits. • Cell phone use is prohibited in a moving vehicle (drivers only) - hands free device not permitted. • Use caution at railroad crossings. • Watch for pedestrians walking into driving lanes.
	• Injury due to inclement weather	• Outdoor work will cease during extreme weather conditions, such as electrical storms, high wind, rain, and dangerous temperatures. • All equipment will be shut down when lightning is visible. • Workers will seek shelter indoors when possible or stay in vehicles.
• Groundwater Sampling	• Collect Measurements and Samples	• All site workers will wear proper PPE to prevent exposure to groundwater.

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
	• Using peristaltic pumps	• All workers using peristaltic pumps should inspect the power cord for damage before and after each use.
	• Fire extinguishers	• Fire extinguishers should be on hand and inspected.
	• Lifting	• All workers should use proper lifting techniques when lifting objects. Mechanical assistance may be used to lift objects weighing over 50 pounds.
	• Drive All Terrain Vehicles	• All workers that will drive All-Terrain Vehicles (ATVs) will follow site specific policies regarding use and operation of ATVs. • In addition, conditions of ATV use will be addressed on Safe Work Permit(s). • All workers will be trained in operating the ATV. • The maximum speed limit is 5 miles per hour. • Read owners manual prior to operating • ATVs are not made for multiple riders. Never carry anyone else on the ATV. • Stay seated at all times while ATV is in motion. • Do not operate the ATV on streets, highways or paved roads. • Driver must have a valid driver's license. • Driver exercise caution when loading and unloading ATV.

Hydrologic Monitoring, LLC (HMI) Job Hazard Analysis (JHA) Job Safety Analysis (JSA) and Personal Protective Equipment (PPE) Assessment	**Task Title:** Mitigating *Exposure to Coronavirus "COVID-19"*		**Date:** HMI Groundwater **New: 4-7-20; Revised:**
	Title: HMI employees, contractors, and visitors	**Supervisor (Print and Sign):**	**Prepared by:** HMI Contractor Safety and Crisis Support
Client Name / Site Location: HF / Artesia & Lovington	**Locations:** HMI-wide	**Business Unit:** All	**Reviewed By:** HMI Committee **Approved By:** HMI Committee

Required or Recommended Personal Protective Equipment:

☐ Hard Hat ☒ Safety Glasses ☐ HiVis Vest ☐ Safety Toe Boots ☒ Gloves: Disposable, Work, etc based on task ☐ Hearing Protection ☒ Other: See below

For certain tasks (see JHA below) the following are required:

- Potable water and soap (preferable) or hand sanitizer with 60%> alcohol
- Paper towels
- Disinfectant wipes
- Tissues
- Nitrile gloves
- Safety glasses or goggles
- Disinfectant spray list of cleaning products to kill Coronavirus

Diluted household bleach solutions can be used in ploce of disinfectant wipes or sprays if appropriate for the surface. Be sure to test the surface for color-fastness prior to use. Follow manufacturer's instructions for application and proper ventilation. Check that the product is not past its expiration date. Never mix household bleach with ammonia or other cleanser. Unexpired household bleach is effective against caranaviruses when properly diluted.

- Prepare a bleach solution by mixing:
  - 5 tablespoons (1/3rd cup) bleach per gallon of water or 4 teaspoons bleach per quart of water

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

This JHA applies to the 2019 Novel Coronavirus (SARS-CoV-2) or the disease known as "COVID-19". The Centers for Disease Control and Prevention (CDC), World Health Organization, (WHO), Occupational Safety and Health Administration (OSHA), and other public health agencies are considering the outbreak of COVID-19 to be a pandemic. It is important that employees, contractors, and visitors take standard precautions recommended by CDC and OSHA. For OSHA's guidance related to Hazard Recognition regarding COVID-19 visit https://www.osha.gov/SLTC/covid-19/hazardrecognition.html.

Risk Assessment: Incomplete information about incubation, infectious period, and transmissibility, as well as evolving circumstances make a definitive risk assessment challenging. In light of this, awareness and operationally informed precautions are warranted. Risk increases with increased exposure to persons potentially infected with COVID-19, warranting enhanced precautions described below. HMI will continue to monitor the situation closely in coordination with appropriate stakeholders and will adjust guidance as appropriate. HMI employees, contractors, and visitors should continue to maintain situational awareness for this outbreak.

Personnel should practice good hygiene, wash hands frequently, and cover their cough or sneeze. Stay away from work if you are ill and contact your health provider for guidance. Avoid unnecessary congregate settings where COVID-19 exposure is more probable. Keep your hands below your chin, and avoid touching mouth, eyes, nose and mucous membranes where contaminated hands can spread the disease to your respiratory system. These basic preventative measures reduce the exposure potential for personnel and slow the spread of communicable diseases.

While most COVID-19 lab confirmed cases do display symptoms, some persons may display mild or no symptoms. Symptoms may appear at different stages of the disease.

Operations/Contractor Work	Risk Category	Hazards	Protective Measures / PPE Guidance
1. Fitness for Duty (working from home or before reporting to work)	**Low**	**1. Being unfit for duty – impacted by illness (e.g coronavirus)**	**1a**. Check that you are fit for duty. If you feel unwell or show signs or symptoms of the coronavirus, do not come to work. Current CDC guidance is that if you have a temperature above 100.4 F [37.8 C], or in close contact with someone suspected of having the coronavirus, then you must stay home. If you have an elevated temperature, do not come to work and contact your healthcare provider. Also, contact your supervisor. By coming to work and onto the project site, employees are self-certifying that they do not have a temperature or show other signs of being unwell and are able to work within the guidelines of the CDC.
2. General Field Work	**Low**	**2a. Working around others** **Signs and Symptoms of** COVID-19 include; • Fever • Cough	**2a**. If experiencing signs or symptoms of COVID-19 infection, such as fever, dry cough, or other flu-like symptoms, do not report to work. If symptoms begin while at work, stop what you are doing immediately and contact your supervisor and an HMI Representative. HMI employees and/or their immediate supervisor are also to contact Human Resources immediately. Personnel and contractors shall maintain at least 6-foot distance from each other. Practice social distancing at tailgate meetings and in break rooms and job trailers.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

		• Extreme Fatigue • Difficulty breathing • Other Flu Like Symptoms	Limit the number of people in job trailers and other confined areas so that this distance can be maintained. If possible, hold meetings outside. If indoors, open window(s) for circulation. Wipe down window handles prior to opening and use gloves to open. Even when practicing social distancing, limit the amount of people in groups to less than 10 people, or fewer if directed by a particular jurisdictional order.
		2b. Encountering frequent touch points and shared equipment	**2b**. Wipe down and disinfect equipment before use with soap and water or alcohol wipes. Wear disposable gloves if possible or regularly wash hands when handling tools or equipment. Replace gloves regularly or wash hands, especially before eating or drinking. Clean hands often with soap and water for at least 20 seconds: • after using the restroom, • after you have been in a public place, • before and after eating, • after blowing your nose, coughing, or sneezing, • after smoking or vaping in designated areas. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands, including around and under fingernails, and rub your hands together until they feel dry. Wear safety glasses and gloves (nitrile or other work gloves) to avoid contact and to reduce touching face, eyes, nose, and mouth. Cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow. Throw used tissues in the trash. Immediately wash or sanitize your hands.
		2c. Eating lunch and bathroom breaks	**2c**. Be sure to wash hands with soap and water whenever a bathroom is nearby. At minimum, do so during bathroom and lunch breaks. Use a paper towel to door handle when exiting bathroom. If using outside toilet facilities (i.e. Porta Johns), wash hands with soap and water or hand sanitizer both before and after opening or closing the door. If wearing nitrile gloves, change gloves prior to using the toilet and remove and dispose of them in a trash receptacle when finished. Use hand sanitizer after you dispose of the gloves. Where possible, personnel are encouraged to pack meals and snacks as needed for the duration of the work day and avoid visiting stores and restaurants. If necessary, modify your schedule to avoid restaurants and public restrooms during peak (i.e., crowded), periods to minimize contact with the public. Use drive-through service for

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

			food pick-up if available. When eating lunch as a group, try to do so outside or in a space with windows open. Wipe down windows prior to opening. Maintain a distance of at least 6 feet and do not share dishes (e.g., bag of chips, communal salad bowl, etc.). Refrain from sharing a field office coffee pot.
3. General Office Work	**Low**	**3a. Working around others**	**3a**. Work from home when possible. Clean hands often with soap and water for at least 20 seconds: • after using the restroom, • after you have been in a public place, • before and after eating, or • after blowing your nose, coughing, or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands, including around and under fingernails, and rub your hands together until your hands feel dry. Cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow. Throw used tissues in the trash. Immediately wash or sanitize your hands. Sit at least six feet apart from others. Change work stations to accommodate this. Even if you are practicing social distancing, you must still limit groups of people to 10 or fewer. Do not hold in-person meetings. After tailgate meetings and/or JHA reviews, supervisors should seek verbal agreement from each attendee and note each acknowledgement rather than passing around for signature. Make hand-sanitizers, sanitizing wipes, and other hygienic supplies readily available. Do not eat or hang out in common areas.
		3b. Encountering frequent "touch points" and handling shared equipment	**3b**. Wipe down keyboards, mouse, phone, headset/headphones, and other "touch points". Limit contact of shared items. Wipe down surfaces before coming into contact with them. Wash hands after handling or wear disposable gloves. In reception areas, use your own pen to sign in and out of offices. Do not eat candy out of candy dishes.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

			Assign someone to clean and disinfect frequently touched surfaces daily. Follow the manufacturer's instructions for cleaning and disinfection products (e.g., concentration, application method, and contact time).
4. Essential Work (deemed by Operations, Project Manager, EHS) where a continued 6 foot distance between persons in not possible.	**Low-Medium**	**4a.**Examples such as Operation and Maintenance tasks, groundwater and potable water monitoring, ballast water sampling, post-closure care services, etc.	4a. Mitigation tactics such as cloth face covers, face shields, gloves, facing away from another person, etc. must be implemented.

Additional Information

Prior to starting work, check that required supplies (i.e., disinfectant spray and wipes, soap, hand sanitizer, nitrile gloves) are available. Request re-supply if stock runs low.

Use alcohol-based hand sanitizer that contains at least 60% alcohol. Wash hands with soap and water whenever available. Remember that soap, including bar soap, is generally available and is considered superior to hand sanitizer or disinfectant wipes and sprays. If disinfectants are unavailable, prepare diluted bleach solution as described on page 1 and use in their place.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

Common touch points and surfaces include but are not limited to:

*Arms on chairs *Table tops *Doorknobs and handles *Countertops *Elevator Buttons *Coffee Pots

*Refrigerator, microwave, dishwasher, toaster handles *Water Dispensers *Cabinet and file drawer knobs and handles

*Phone receivers, keypads *Copier, printer, and fax control buttons *Sink faucets *Light switches

*Shared office supplies such as staplers, paper cutters, scissors, packaging tape dispensers, writing utensils *Vehicle handles, tailgates, etc.

If personnel are showing possible symptoms of or have been in recent direct contact with others showing symptoms of coronavirus, stop work and notify the site supervisor and HR.

Visit the CDC webpage on cleaning and disinfecting procedures: CDC Guidance for Community and Residential Cleaning-Disinfection for Coronavirus

A list of approved disinfectants for use against COVID-19, is available here: US EPA List of Disinfectants Effective Against Coronaviruses.

Empty, or blank, cells indicate that a data observation was not reported.

*Ground Cover: 1=Grass; 2=Fallow; 3=Bare Ground; 4=Brome grass; 5=Sod; 6=Straw mulch; 7=Grass muck; 8=Bare muck; 0=Unknown

"s" This data value failed one of NCDC's quality control tests. "At Obs." = Temperature at time of observation

"T" values in the Precipitation or Snow category above indicate a "trace" value was recorded.

"A" values in the Precipitation Flag or the Snow Flag column indicate a multiday total, accumulated since last measurement, is being used.

Data value inconsistency may be present due to rounding calculations during the conversion process from SI metric units to standard imperial units.

Ms. Julie Speer, P.G.
Sr. Project Manager
TRC
505 East Huntland Drive, Suite 250
Austin, Texas 78752

Subject: October 2020 (Fall) Groundwater Monitoring Event
Sitewide Gauging – October 6, 2020
Groundwater Sampling – October 6-7, 2020
Navajo Refining Company, Artesia, New Mexico

Dear Ms. Speer:

This document summarizes groundwater monitoring field activities conducted by Hydrologic Monitoring, LLC (HMI) on behalf of TRC at the Navajo Refining Company, Artesia Refinery, Artesia, New Mexico.

Contents

Field Activities Narrative
Table 1: (Gauging Data, GW Field Parameters, Well Inspections, & Analytical Program)
Groundwater Sampling SOP Memo
Job Hazard Analysis (JHA) forms
Groundwater Sampling Forms, followed by Field Instrument Calibration Log
(three (3) emails - forms in order of field-strategy, Table 1)
Chain-of-Custody Forms (one email)

Field Activities Narrative

1. Historically-conducted in April, the 1H20 event was delayed until June 2020, due to COVID 19 concerns. HMI conducted the *Fall 2020* groundwater monitoring event in October 2020 (i.e., "SA" designations only, in Table 1). Sitewide gauging was conducted October 6, 2020. Groundwater sampling was conducted October 6-7 with HMI team; 20 cooler-entire project shipped from Roswell, New Mexico FedEx location, October 7, 2020.

2. Groundwater sampling was conducted in accordance with the Site Sampling and Analysis Plan, EPA guidance, and the attached Memorandum - Low-Flow Groundwater Monitoring Standard Operating Procedures, Navajo Refining Co. - Artesia, New Mexico. Per regulatory request, if measured LNAPL thickness was *less than* 0.03 feet, in any well scheduled for groundwater sampling, LNAPL was removed, and the well was sampled. If LNAPL thickness was equal to, or greater than 0.03 feet, in any well scheduled for sampling, the well was not sampled. Gauging data, groundwater field parameters, and well inspection information is summarized in Table 1. Samples were shipped overnight FedEx, to Pace National, Mt. Juliet, TN. The groundwater sampling process is documented on the attached groundwater sampling forms.

3. Field QA/QC Sampling (per Refinery Area):

   Evaporation Ponds
   Duplicates:
   Dup-EP-01 at MW-7A
   Dup-EP-02 at MW-22A
   Dup-EP-03 at MW-3
   Equipment Blanks:
   EB-EP-01 collected over decontaminated gauging probe after sampling at MW-74
   EB-EP-02 collected over decontaminated gauging probe after sampling at MW-124
   EB-EP-03 collected over decontaminated gauging probe after sampling at MW-5A
   EB-EP-04 collected over decontaminated gauging probe after sampling at MW-79
   Trip Blank-EP-01
   Trip Blank-EP-02
   Trip Blank-EP-03
   Trip Blank-EP-04

   NCL
   Duplicate:
   Dup-NCL-01 at NCL-49
   Equipment Blank:
   EB-NCL-01 collected over decontaminated gauging probe after sampling at NCL-32
   Trip Blank-NCL-01

   TMD
   Trip Blank-TMD-01

TEL
Duplicate:
Dup-TEL-01 at TEL-4
Equipment Blank:
EB-TEL-01 collected over decontaminated gauging probe after sampling at TEL-2
Trip Blank-TEL-01

REST ("rest" of the site)
Duplicates:
Dup-REST-01 at MW-113
Dup-REST-02 at MW-104
Dup-REST-03 at MW-134
Dup-REST-04 at MW-60
Dup-REST-05 at KWB-12B
Equipment Blanks:
EB-REST-01 collected over decontaminated gauging probe after sampling at MW-113
EB-REST-02 collected over decontaminated gauging probe after sampling at MW-104
EB-REST-03 collected over decontaminated gauging probe after sampling at MW-134
EB-REST-04 collected over decontaminated gauging probe after sampling at MW-60
EB-REST-05 collected over decontaminated gauging probe after sampling at KWB-12B
Trip Blank-REST-01
Trip Blank-REST-02
Trip Blank-REST-03
Trip Blank-REST-04

4. Notes:

1H20 & 2H20: Per TRC, Pace chain-of-custodies, reference PO # 150726

TRC notes from October 2020:
HMI's daily JHA forms to be included in deliverables package.
Email TRC "Estimated Field Hours" table, pre-event, and followup with "Actual Field Hours" table, post-event.
Pre-2H20 - Wood installed wells MW-137A, MW-138A, and MW-62R inside Refinery; TRC installed MW-145 (+Dup-01, +EB-01), MW-146, MW-147, and MW-148 (East Field/Chase Farms), for VOC only, on separate COC and TRC invoice.
TRC also installed replacement well MW-53R.
Pre-1H20, MW-101 recompleted at-grade (due to in-plant construction), then pre-2H20, MW-101 surrounding area was excavated on all four sides, approximately 4-ft deep; and planned to be refilled, not affecting MW-101, per Navajo (photo).

MW-101 area, 10-6-20

Irrigation wells may experience upcoming changes, per TRC (TBD, replacements, etc.), with possible renewed well-access on the Joy farm property upcoming, per TRC.

Training modules: "24HFNAV HOLLYFRONTIER SITE SPECIFIC ORIENTATION ARTESIA-NM", and additional "LPS" module – both @ HASC, annually (HMI's December-cycle). HMI's DISA 2-yr backgound check/drug/alcohol requirements approved by safety-trailer personnel on 10-3-17 (updated 2019), as reported through HASC system; HMI maintains its access qualifications.
Per Navajo, purgewater is disposed in the pad sump (inside, then to the left, after Main Gate-entrance). Alternately, North Bundle Pad sump (fenced area of drums, etc.), notifying FCC control room prior to entrance.
Sitewide well/gate lock combinations: "2-0-1-3" (less often "2-0-0-2").
With suggested telephone notification, FedEx pickup from locked Artesia Refinery shed (35-25-39 lock combination), no earlier than approximately 14:00 daily, located across from Artesia Wool Co (access shed-area from inside the Refinery).
North side of Hwy 82, east of site, gate with cable and combination lock (8810).
POTW bldg, check-in as needed, to borrow a key or get gate unlocked.
HMI borrows Navajo key sets for "Evaporation Ponds" & "TEL" at permitting; returning upon event completion.
Navajo's Mr. Robert Combs, Randy Dade, Richard Orosco, for daily safety review & permit-issue per team member (typically 8-10 HMI team-).
Navajo completed well surface completion upgrades in a phased-approach, beginning 2018. HMI's well inspections are documented on well gauging and sampling forms. Well inspection items of concern (i.e., "Issues") highlighted in yellow (Table 1).

HMI appreciates the opportunity to assist TRC with this project. If you have any questions or would like additional information please feel free to call us at 713.464.5206.

Sincerely,

HYDROLOGIC MONITORING

NCL = North Colony Landfarm
NE = Northeast
NW = Northwest
OCD = Oil Conservation District
PSH = Phase Separated Hydrocarbon
ROW = right of way
RR = Richey Road
S = South
SA = Semi-annual (Mar/Apr and Sep/Oct events)
SE = Southeast
SW = Southwest
TMD = Three Mile Ditch
TEL = Tetra Ethyl Lead Impoundment
UG = Upgradient
US285 = U.S. Highway 285
US82 = U.S. Highway 82
VOC = Volatile Organic Compounds
W = West
Y = Yes

= Well with recently gauged LNAPL (light nonaqueous phase liquid)

Note - groundwater samples are not collected from any well with LNAPL measured 0.03-ft thick, or greater

At wells scheduled for groundwater sampling (having LNAPL <0.03-ft, will have LNAPL removed), then will be sampled

Groundwater analytical methods can include:

1. Purge parameters to be measured and recorded in the field will include pH, temp, spec. cond., diss. oxy., and oxidation-reduction potential.
2. DRO by Method 8015Mod.
3. GRO by Method 8015Mod.
4. VOCs by Method 8260, to include methyl tert butyl ether (MTBE).
5. Total metals by Method 6010/6020 and/or 7470. Specific metals shown in heading, abbreviations from periodic chart (incl B, Cd, Co, U, per 3-7-16 State request).
6. Dissolved metals - same list as total metals but only analyzed during April event (field filtered by HMI)
7. Cyanide by Method SM4500.
8. Cations/anions to include Calcium, Potassium, and Sodium by Method 6010 or 6020 and Sulfate, Chloride and Fluoride by Method 300.
9. Nitrates/Nitrites as Nitrogen by Method 300.
10. Total Dissolved Solids by Method 2540C.

"-" indicates parameter not required.

Recovery trenches 11, 15, 16, 17 and 18 have multiple vertical "wells". Gauging & sampling points are: RW #11-0, RW #15C, RW #16B, RW #17A and RW #18A.

Groundwater Monitoring Standard Operating Procedures
Navajo Refining LLC – Artesia, New Mexico

HMI conducts low-flow groundwater sampling in accordance with the site Sampling and Analysis Plan and EPA guidance (including Puls and Barcelona, 1996 EPA Guidance on Low-Flow Groundwater Sampling; REV No. 4, September 19, 2017, and Yeskis & Zavala, 2002, EPA/542:S-02/00, Groundwater Sampling Guidelines for Superfund and RCRA Project Managers).

Groundwater Sampling Methodology

HMI conducts low-flow groundwater sampling using a peristaltic pump and dedicated polyethylene tubing at wells with requisite depths-to-water. At a limited number of wells with depths-to-water greater than peristaltic range, low-flow groundwater sampling is conducted using dedicated or non-dedicated bladder pumps. In 2016, at no cost to TRC, HMI installed HMI-owned bladder pumps in a limited number of wells (approximately four). At such time that HMI no longer conducts routine groundwater monitoring at the site, it respectfully requests the opportunity to recover these dedicated bladder pumps. Sample intakes are set at midscreen, when possible (generally at least two feet from the base of the well). Sample intake depths are permanently marked, ensuring future sampling events consistently monitor the targeted water-bearing interval. During sampling with a peristaltic pump, the sample tube is attached to the pump using a one-foot section of dedicated, flexible silicone tubing (item #5703, Geotech Environmental Equipment, Inc.). A two-foot segment of polyethylene tubing connects the silicone tubing in the pump to the flow-through cell, using a disposable segment of silicone tubing. Purging commences through a sealed flow-through cell at EPA-recommended purge rates (generally 0.1 to 0.2 liters/minute), while well drawdown is monitored. Groundwater field parameter readings are measured at 0.5-liter intervals (generally an equivalent of one cell-volume "turnover"). Field parameters of pH, specific conductivity, temperature, dissolved oxygen, and oxidation-reduction potential are monitored inside the cell. Turbidity is monitored outside the cell. Groundwater field instrumentation is calibrated and recorded daily in accordance with manufacturer specifications.

Purging continues until a requisite volume of groundwater is purged (generally a minimum of 3,000 ml or six flow-through cell volumes), and field parameters have stabilized in accordance with EPA guidance:

Water Quality Parameters (Stabilization Parameters in Accordance with EPA (2002), Groundwater Sampling Guidelines for Superfund and RCRA Project Managers, Yeskis & Zavala, EPA/542:S-02/001)

- pH +/- 0.1 units;
- Temperature -
- Conductivity +/- 3%
- Dissolved Oxygen +/- 0.3 mg/L
- ORP +/- 10%
- Turbidity 10%

Immediately prior to sampling, the input tubing to the flow-through cell is disconnected from the disposable silicone receiving tubing on the input barb on the flow-through cell, and groundwater samples are collected directly into lab-supplied containers. Groundwater samples are placed in iced coolers, and remain in HMI's custody until shipped to ESC Lab Sciences via FedEx-overnight. Peristaltic tubes and/or dedicated bladder pumps may be dedicated in respective wells. Alternatively, dedicated tubing may be retrieved, bagged, labeled, and stored in tubs maintained at HMI. Wells with very limited water column thicknesses may be sampled with disposable bailers. Active recovery well and irrigation wells are sampled using sample ports. The purging and sampling process is documented on groundwater sampling field forms.

Cross-Contamination Prevention Program

Dedicated peristaltic tubing and dedicated bladder pumps are used as possible, to minimize any potential cross-contamination issues during the groundwater monitoring process. Remaining non-dedicated equipment (e.g., electronic gauging probes or non-dedicated bladder pumps, etc.) is properly decontaminated prior to use and between wells. The decontamination procedure may include a combination of chemical and mechanical decontamination. For example, scrubbing with ethyl alcohol (isopropanol) as warranted, followed by scrubbing using an Alconox-water solution, and distilled water rinse. The decontamination procedure for non-dedicated bladder pumps consists of cycling an Alconox-water solution through the pump bladder. Distilled water is cycled through the pump bladder, followed by decontaminating the exterior body of the pump, using the methods outlined above.

HMI Deliverables

HMI provides field documentation of groundwater monitoring activities in a deliverables package that includes a brief narrative, summary table (with gauging data, field parameters, well inspection data, and required analytical scope), groundwater sampling forms, field instrument calibration log, and chain-of-custody forms (by Refinery "Area"), and a groundwater sampling SOP memo.

HMI Groundwater

HYDROLOGIC MONITORING
JOB HAZARD ANALYSIS

Activity: Groundwater Sampling	**Date:** 6/16/20 6/17/20 10/6/20 – 10/7/20
	Project: Navajo-Artesia GW Samp.
Description of the work: Collect fluid level information and water samples from monitoring wells. NOTE: All site workers have STOP WORK Authorization at any time site conditions change and/or become unsafe	**Site Supervisor:** Scott Ude Scott Ude Scott Ude **Attendees Signatures:** Scott Ude Scott Ude Scott Ude

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
• General Hazards	• Accidents due to lack of training	• All workers will complete Safety Council Basic Plus Training and all site-specific training. • All workers will complete OSHA 40-hr HAZWOPER training with yearly updates. • Workers will be trained prior to performing new activities. • Tailgate safety meetings will be held daily.
	• Head Injury	• ANSI-approved hard hats will be worn at all times, in the manner they were designed (brim forward, no modifications no ball caps, etc.) Bump hats and Cowboy hard hats are not permitted.
	• Hearing Damage	• Workers will wear hearing protection whenever voices must be raised above normal conversational speech or when noise levels exceed 85 decibels due to loud noise sources such as working near heavy equipment.
	• Hand Injury	• Leather gloves will be worn when handling

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
		sharp, rough, or slippery surfaces. • Appropriate gloves for chemicals will be worn per project HASP.
	• Injuries resulting from manual lifting	• Workers will be instructed in safe lifting techniques (keep back straight, bend at knees, keep load close to body, lift smoothly, and do not twist at the waist. • Split heavy loads into smaller loads when possible. • Stretch before doing task • Make sure the path of travel is clear prior to the lift.
	• Foot Injury	• Workers will wear sturdy leather safety-toed boots that reach the ankle at all times. • For wet conditions or for chemical hazards proper water resistant overboots or chemical resistant safety-toed boots must be worn.
	• Eye Injury	• Workers will wear protective eyewear with sideshields that meet ANSI Z-87 at all times. If the worker wears prescription eyeglasses they must meet the same criteria or wear ANSI Z-87 safety over glasses. • Workers must have immediate access to Chemical monogoggles. Retaining rings are not permitted.
	• Slips, trips, and falls	• Walking/working surfaces will be kept free of clutter, debris, and congestion to the greatest extent possible. • Personnel should be aware of wet/muddy surfaces and use caution. Use caution when traversing uneven ground.
	• Injuries associated with insects, snakes, spiders, alligators, and poisonous plants	• Workers will wear snake chaps, leggings or sturdy rubber knee high boots when walking in uncleared, grassy areas. • Workers will avoid walking in areas where snakes or alligators may hide. Always look ahead where you are walking for signs of either. Use caution when moving or lifting objects that could be used for cover. Never reach under or behind objects, or into other areas where snakes or alligators may hide. • Workers will use insect repellant for all types of biting / stinging insects. Use care when opening wells to avoid bites and / or stings. • Workers will always use the buddy system and have a means of contacting emergency

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
		aid if needed by cell phone or Radio. • Workers will immediately wash any areas that were exposed to poisonous plants.
	• Chemical Exposure	• MSDS will be kept onsite in a location that all workers can access. • All workers must know where the emergency rally point is located when an evacuation alarm sounds in the plant. • Workers will sign in and out when they arrive and leave the work area.
	• Heat Stress	• All workers will take routine breaks in a cool, shaded area. • Workers will drink plenty of water throughout the day. • Workers will decrease intake of coffee and caffeinated soft drinks during working hours.
	• Vehicle accidents	• All vehicles must be inspected for safe operation onsite. • Vehicle operators must have a valid driver's license and will be instructed in safe operations while on the site. • Seat belts will be worn by all occupants. • When backing, use the buddy system or get out and look at position of objects. • All vehicles must contain a fire extinguisher, first aid kit, evacuation map, and route to hospital (map/directions). • Drivers will observe and not exceed posted plant speed limits. • Cell phone use is prohibited in a moving vehicle (drivers only) - hands free device not permitted. • Use caution at railroad crossings. • Watch for pedestrians walking into driving lanes.
	• Injury due to inclement weather	• Outdoor work will cease during extreme weather conditions, such as electrical storms, high wind, rain, and dangerous temperatures. • All equipment will be shut down when lightning is visible. • Workers will seek shelter indoors when possible or stay in vehicles.
• Groundwater Sampling	• Collect Measurements and Samples	• All site workers will wear proper PPE to prevent exposure to groundwater.

Work Activity Sequence	Potential Health and Safety Hazards	Hazard Controls
	• Using peristaltic pumps	• All workers using peristaltic pumps should inspect the power cord for damage before and after each use.
	• Fire extinguishers	• Fire extinguishers should be on hand and inspected.
	• Lifting	• All workers should use proper lifting techniques when lifting objects. Mechanical assistance may be used to lift objects weighing over 50 pounds.
	• Drive All Terrain Vehicles	• All workers that will drive All-Terrain Vehicles (ATVs) will follow site specific policies regarding use and operation of ATVs. • In addition, conditions of ATV use will be addressed on Safe Work Permit(s). • All workers will be trained in operating the ATV. • The maximum speed limit is 5 miles per hour. • Read owners manual prior to operating • ATVs are not made for multiple riders. Never carry anyone else on the ATV. • Stay seated at all times while ATV is in motion. • Do not operate the ATV on streets, highways or paved roads. • Driver must have a valid driver's license. • Driver exercise caution when loading and unloading ATV.

6/16/20 Statewide 6/17/20 Statewide 10/6/20 - 10/7/20 Statewide

Hydrologic Monitoring, LLC (HMI) Job Hazard Analysis (JHA) Job Safety Analysis (JSA) and Personal Protective Equipment (PPE) Assessment	**Task Title:** Mitigating *Exposure to Coronavirus "COVID-19"*		**Date:** HMI Groundwater **New: 4-7-20; Revised:**
	Title: HMI employees, contractors, and visitors	**Supervisor (Print and Sign):**	**Prepared by:** HMI Contractor Safety and Crisis Support
Client Name / Site Location: HF / Artesia & Lovington	**Locations:** HMI-wide	**Business Unit:** All	**Reviewed By:** HMI Committee **Approved By:** HMI Committee

Required or Recommended Personal Protective Equipment:

☐ Hard Hat ☒ Safety Glasses ☐ HiVis Vest ☐ Safety Toe Boots ☒ Gloves: Disposable, Work, etc based on task ☐ Hearing Protection ☒ Other: See below

For certain tasks (see JHA below) the following are required:

- Potable water and soap (preferable) or hand sanitizer with 60%> alcohol
- Paper towels
- Disinfectant wipes
- Tissues
- Nitrile gloves
- Safety glasses or goggles
- Disinfectant spray list of cleaning products to kill Coronavirus

Diluted household bleach solutions can be used in place of disinfectant wipes or sprays if appropriate for the surface. Be sure to test the surface for color-fastness prior to use. Follow manufacturer's instructions for application and proper ventilation. Check that the product is not past its expiration date. Never mix household bleach with ammonia or other cleanser. Unexpired household bleach is effective against coronaviruses when properly diluted.

- Prepare a bleach solution by mixing:
  - 5 tablespoons (1/3rd cup) bleach per gallon of water or 4 teaspoons bleach per quart of water

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

This JHA applies to the 2019 Novel Coronavirus (SARS-CoV-2) or the disease known as "COVID-19". The Centers for Disease Control and Prevention (CDC), World Health Organization, (WHO), Occupational Safety and Health Administration (OSHA), and other public health agencies are considering the outbreak of COVID-19 to be a pandemic. It is important that employees, contractors, and visitors take standard precautions recommended by CDC and OSHA. For OSHA's guidance related to Hazard Recognition regarding COVID-19 visit https://www.osha.gov/SLTC/covid-19/hazardrecognition.html.

Risk Assessment: Incomplete information about incubation, infectious period, and transmissibility, as well as evolving circumstances make a definitive risk assessment challenging. In light of this, awareness and operationally informed precautions are warranted. Risk increases with increased exposure to persons potentially infected with COVID-19, warranting enhanced precautions described below. HMI will continue to monitor the situation closely in coordination with appropriate stakeholders and will adjust guidance as appropriate. HMI employees, contractors, and visitors should continue to maintain situational awareness for this outbreak.

Personnel should practice good hygiene, wash hands frequently, and cover their cough or sneeze. Stay away from work if you are ill and contact your health provider for guidance. Avoid unnecessary congregate settings where COVID-19 exposure is more probable. Keep your hands below your chin, and avoid touching mouth, eyes, nose and mucous membranes where contaminated hands can spread the disease to your respiratory system. These basic preventative measures reduce the exposure potential for personnel and slow the spread of communicable diseases.

While most COVID-19 lab confirmed cases do display symptoms, some persons may display mild or no symptoms. Symptoms may appear at different stages of the disease.

Operations/Contractor Work	Risk Category	Hazards	Protective Measures / PPE Guidance
1. Fitness for Duty (working from home or before reporting to work)	**Low**	**1. Being unfit for duty – impacted by illness (e.g coronavirus)**	**1a**. Check that you are fit for duty. If you feel unwell or show signs or symptoms of the coronavirus, do not come to work. Current CDC guidance is that if you have a temperature above 100.4 F [37.8 C], or in close contact with someone suspected of having the coronavirus, then you must stay home. If you have an elevated temperature, do not come to work and contact your healthcare provider. Also, contact your supervisor. By coming to work and onto the project site, employees are self-certifying that they do not have a temperature or show other signs of being unwell and are able to work within the guidelines of the CDC.
2. General Field Work	**Low**	**2a. Working around others** **Signs and Symptoms of** COVID-19 include; • Fever • Cough	**2a**. If experiencing signs or symptoms of COVID-19 infection, such as fever, dry cough, or other flu-like symptoms, do not report to work. If symptoms begin while at work, stop what you are doing immediately and contact your supervisor and an HMI Representative. HMI employees and/or their immediate supervisor are also to contact Human Resources immediately. Personnel and contractors shall maintain at least 6-foot distance from each other. Practice social distancing at tailgate meetings and in break rooms and job trailers.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

		• Extreme Fatigue • Difficulty breathing • Other Flu Like Symptoms	Limit the number of people in job trailers and other confined areas so that this distance can be maintained. If possible, hold meetings outside. If indoors, open window(s) for circulation. Wipe down window handles prior to opening and use gloves to open. Even when practicing social distancing, limit the amount of people in groups to less than 10 people, or fewer if directed by a particular jurisdictional order.
		2b. Encountering frequent touch points and shared equipment	**2b**. Wipe down and disinfect equipment before use with soap and water or alcohol wipes. Wear disposable gloves if possible or regularly wash hands when handling tools or equipment. Replace gloves regularly or wash hands, especially before eating or drinking. Clean hands often with soap and water for at least 20 seconds: • after using the restroom, • after you have been in a public place, • before and after eating, • after blowing your nose, coughing, or sneezing, • after smoking or vaping in designated areas. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands, including around and under fingernails, and rub your hands together until they feel dry. Wear safety glasses and gloves (nitrile or other work gloves) to avoid contact and to reduce touching face, eyes, nose, and mouth. Cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow. Throw used tissues in the trash. Immediately wash or sanitize your hands.
		2c. Eating lunch and bathroom breaks	**2c**. Be sure to wash hands with soap and water whenever a bathroom is nearby. At minimum, do so during bathroom and lunch breaks. Use a paper towel to door handle when exiting bathroom. If using outside toilet facilities (i.e. Porta Johns), wash hands with soap and water or hand sanitizer both before and after opening or closing the door. If wearing nitrile gloves, change gloves prior to using the toilet and remove and dispose of them in a trash receptacle when finished. Use hand sanitizer after you dispose of the gloves. Where possible, personnel are encouraged to pack meals and snacks as needed for the duration of the work day and avoid visiting stores and restaurants. If necessary, modify your schedule to avoid restaurants and public restrooms during peak (i.e., crowded), periods to minimize contact with the public. Use drive-through service for

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

			food pick-up if available. When eating lunch as a group, try to do so outside or in a space with windows open. Wipe down windows prior to opening. Maintain a distance of at least 6 feet and do not share dishes (e.g., bag of chips, communal salad bowl, etc.). Refrain from sharing a field office coffee pot.
3. General Office Work	**Low**	**3a. Working around others**	**3a**. Work from home when possible. Clean hands often with soap and water for at least 20 seconds: • after using the restroom, • after you have been in a public place, • before and after eating, or • after blowing your nose, coughing, or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands, including around and under fingernails, and rub your hands together until your hands feel dry. Cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow. Throw used tissues in the trash. Immediately wash or sanitize your hands. Sit at least six feet apart from others. Change work stations to accommodate this. Even if you are practicing social distancing, you must still limit groups of people to 10 or fewer. Do not hold in-person meetings. After tailgate meetings and/or JHA reviews, supervisors should seek verbal agreement from each attendee and note each acknowledgement rather than passing around for signature. Make hand-sanitizers, sanitizing wipes, and other hygienic supplies readily available. Do not eat or hang out in common areas.
		3b. Encountering frequent "touch points" and handling shared equipment	**3b**. Wipe down keyboards, mouse, phone, headset/headphones, and other "touch points". Limit contact of shared items. Wipe down surfaces before coming into contact with them. Wash hands after handling or wear disposable gloves. In reception areas, use your own pen to sign in and out of offices. Do not eat candy out of candy dishes.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

			Assign someone to clean and disinfect frequently touched surfaces daily. Follow the manufacturer's instructions for cleaning and disinfection products (e.g., concentration, application method, and contact time).
4. Essential Work (deemed by Operations, Project Manager, EHS) where a continued 6 foot distance between persons in not possible.	**Low-Medium**	**4a.**Examples such as Operation and Maintenance tasks, groundwater and potable water monitoring, ballast water sampling, post-closure care services, etc.	4a. Mitigation tactics such as cloth face covers, face shields, gloves, facing away from another person, etc. must be implemented.

Additional Information

Prior to starting work, check that required supplies (i.e., disinfectant spray and wipes, soap, hand sanitizer, nitrile gloves) are available. Request re-supply if stock runs low.

Use alcohol-based hand sanitizer that contains at least 60% alcohol. Wash hands with soap and water whenever available. Remember that soap, including bar soap, is generally available and is considered superior to hand sanitizer or disinfectant wipes and sprays. If disinfectants are unavailable, prepare diluted bleach solution as described on page 1 and use in their place.

Released to Imaging: 11/21/2023 10:16:55 AM
Received by OCD: 6/23/2021 4:05:29 PM

Common touch points and surfaces include but are not limited to:

*Arms on chairs *Table tops *Doorknobs and handles *Countertops *Elevator Buttons *Coffee Pots
*Refrigerator, microwave, dishwasher, toaster handles *Water Dispensers *Cabinet and file drawer knobs and handles
*Phone receivers, keypads *Copier, printer, and fax control buttons *Sink faucets *Light switches
*Shared office supplies such as staplers, paper cutters, scissors, packaging tape dispensers, writing utensils *Vehicle handles, tailgates, etc.

If personnel are showing possible symptoms of or have been in recent direct contact with others showing symptoms of coronavirus, stop work and notify the site supervisor and HR.

Visit the CDC webpage on cleaning and disinfecting procedures: CDC Guidance for Community and Residential Cleaning-Disinfection for Coronavirus

A list of approved disinfectants for use against COVID-19, is available here: US EPA List of Disinfectants Effective Against Coronaviruses.

ANALYTICAL REPORT

June 29, 2020

TRC Solutions - Austin, TX

Sample Delivery Group:	L1230655
Samples Received:	06/18/2020
Project Number:	330538.0000.0000
Description:	NCL Spring 2020
Site:	NCL (NAVAJO-ARTESIA)
Report To:	Julie Speer
	505 E. Huntland Dr, Ste 250
	Austin, TX 78752

Entire Report Reviewed By:

Chris McCord
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

Volatile Organic Compounds (GC/MS) by Method 8260B	WG1496260	1	06/20/20 14:46	06/20/20 14:46	ACG	Mt. Juliet, TN

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Chris McCord
Project Manager

Gravimetric Analysis by Method 2540 C-2011

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

ANALYTICAL REPORT

June 29, 2020

TRC Solutions - Austin, TX

Sample Delivery Group:	L1230678
Samples Received:	06/18/2020
Project Number:	330538.0000.0000
Description:	TEL Spring 2020
Site:	TEL - NAVAJO-ARTESIA
Report To:	Julie Speer 505 E. Huntland Dr, Ste 250 Austin, TX 78752

Entire Report Reviewed By:

Chris McCord
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

Volatile Organic Compounds (GC/MS) by Method 8260B	WG1496261	1	06/21/20 01:58	06/21/20 01:58	BMB	Mt. Juliet, TN

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Chris McCord
