RE: Hydrocarbon Seep Interim Measures 2023 Fourth Quarter Status Report
Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery)
EPA ID# NMD000333211

Dear Mr. Maestas:

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery), Gallup, New Mexico is submitting this "Hydrocarbon Seep Interim Measures Status Report" for the 4th quarter of 2023. This document provides the status for quarterly Interim Measures (IM) activities associated with the Hydrocarbon Seep Area and separate phase hydrocarbon (SPH) monitoring well activities throughout the Refinery as requested by the New Mexico Environment Department (NMED) in Comment 22 of "Disapproval, Interim Measures Report" dated April 26, 2016. Presented below are summaries of specific activities related to source control of the Hydrocarbon Seep Area (Figure 1), Borrow Pit Sumps (Figure 2), monthly fluid level readings, and withdrawal of SPH and associated groundwater in the marketing tank farm (MKT) and non-MKT areas. This document presents fluid recovery information from the groundwater recovery system in the Hydrocarbon Seep Area, Borrow Pit Sumps, and the French Drain (Figure 3). The refinery has remained in indefinite idle status since April 2020. Refinery resources and personnel were operating at a reduced capacity and have focused on facility maintenance during the 4th quarter of 2023.

Hydrocarbon Seep Area Source Control

The Hydrocarbon Seep Area is within the groundwater recovery capture zone. Beginning March 1, 2023, groundwater is extracted through an automated system. The amount of SPH recovered is not quantified with the groundwater system; therefore, total fluid volumes are reported.

In early November 2023, the Hydrocarbon Seep Area groundwater extraction system pumps failed. This resulted in reduced groundwater and SPH extraction volumes from the Hydrocarbon Seep Area during the 4th quarter of 2023. Weather permitting, total fluids will be recovered on a monthly basis via vacuum truck until new pumps can be acquired and installed.

Mr. Ricardo Maestas
January 23, 2024
Page 2

Activities and observations for the Hydrocarbon Seep Area for the 4th quarter of 2023 include:

- There were an estimated 14,633 gallons (gals) of total fluids recovered from the Hydrocarbon Seep Area standpipe sumps (S-1 through S-6) (Figure 1) using the groundwater extraction system and vacuum truck recovery during 4th quarter of 2023 (Table 1A). No SPH was measured or observed, however there is a strong odor of hydrocarbons, suggesting of the presence of dissolved phase hydrocarbons in the recovered fluid.
- There were 339 gals of fluid recovered in the French Drain area (Figure 3) using the groundwater extraction system during 4th quarter of 2023 (Table 1B).
- There was no fluid recovered from the retention ditch during the 4th quarter because there was no standing fluid (Table 1C and Figure 1).

Borrow Pit Activities

Five sumps (BPS-1 through BPS-5) and two piezometers (PZ-1 and PZ-2) were installed in the Borrow Pit west of the Truck Loading Rack after a gasoline seep was observed in the area in 2020 (Figure 2). Vacuum truck fluid recovery from these sumps began on May 10, 2021. An additional 3 sumps (BPS-6 through BPS-8) and an additional 2 piezometers (PZ-3 and PZ-4) were installed in January 2022. Vacuum truck fluid-recovery from the additional sumps, BPS-6, BPS-7, and BPS-8, began on January 10, 2022.

Sumps BPS-1, BPS-2, and BPS-3 have generally contained measurable SPH since installation on April 16, 2021. Sumps BPS-6 and BPS-7, and piezometers PZ-3 and PZ-4, have generally contained measurable SPH since installation on January 24, 2022. SPH was first detected in BPS-4 and BPS-5 in September 2021. During 2023, SPH detection in BPS-4 and BPS-5 was intermittent. SPH was first detected in BPS-8 on February 8, 2022. No SPH was detected in BPS-8 during 2023. No SPH has been detected in PZ-1 or PZ-2 since installation on April 14, 2021.

The groundwater extraction system began fluid recovery in wells BPS-1, BPS-2, BPS-3, BPS-4, BPS-5, and BPS-8 at the Borrow Pit on March 7, 2023. The extraction pumps were manually operated one to three times a day, four days a week, weather permitting, from March 7, 2023, to May 31, 2023. Starting May 31, 2023, the extraction pumps were automated, pumping each well approximately 24 times per day.

On average, the relative SPH thickness remained consistent in the sumps and piezometers during the 4th quarter 2023 (Table 2A). BPS-6 and BPS-7 were re-drilled to a deeper total depth to allow for the installation of pumps into the sumps on June 26 and June 27, 2023, respectively. After equipment issues were detected at the Hydrocarbon Seep Area in November 2023, the installation of pumps in BPS-6 and BPS-7 was put on temporary hold.

An estimated total of 4,829 gals of SPH and 6,986 gals of water were recovered by the borrow pit groundwater extraction system (Table 2B) in the 4th quarter. The total fluid volume

Mr. Ricardo Maestas
January 23, 2024
Page 3

recovered from the borrow pit groundwater recovery system is estimated based on sump depths, well diameter, water and SPH fluid levels, and pump starts.

New surface hydrocarbon staining was observed near BPS-2 and BPS-3 on April 24, 2023. There was no noticeable change to the staining in the Borrow Pit over the 4th quarter. The Refinery will continue to monitor the hydrocarbon staining in the Borrow Pit. Automated extraction is expected to continue to reduce the SPH thickness on the groundwater and to reduce hydrocarbon surface seepage.

Surface Discharge Observations

Pursuant to NMED's March 5, 2019, letter, the Hydrocarbon Seep Area is routinely monitored to evaluate the discharge of hydrocarbons to the land surface where shallow water seeps have been observed within the retention ditch and to the south near the original seep location. The measurable amount of SPH seeping into the retention ditch has essentially stopped. The Refinery will continue to monitor the area and if standing fluid returns, it will be recovered.

As requested by NMED in Comment 5 from "Disapproval Marketing Tank Farm Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report", dated June 2, 2021, the water seep near the 90-day pad is visually inspected monthly for SPH (Figure 2). The water seep area was inspected each month in the 4th quarter and was found to be dry and had no visual evidence of SPH.

Monthly Fluid Levels

Monthly fluid level data for the MKTF and refinery areas are presented in Tables 3A and 3B. Compared to the 3rd quarter of 2023, there was less than a foot of water level change (increasing or decreasing) in the majority of monitored wells with a trend in decreasing water level. The following wells had greater than a foot of water level decrease: MKTF-02R, MKTF-04R, MKTF-12, MKTF-16, MKTF-25, MKTF-28, MKTF-29, MKTF-30, MKTF-43, MKTF-44, OW-58, and STP1-NW. The following wells showed greater than a foot of water level increase: MKTF-10 and MKTF-40. Based on field observations, it appears that the groundwater extraction system is drawing down the groundwater table, exposing residual SPH held in the formation, thus resulting in increased detections of SPH in monitoring wells.

MKTF and Non-MKTF Fluid Recovery

Fluid recovery in MKTF wells (Figure 3) upgradient of the Hydrocarbon Seep Area and with recoverable SPH, continued during the 4th quarter of 2023 using a vacuum truck. An estimated total of 144 gals of water and 73 gals of SPH were extracted during the 4th quarter. As requested in Comment 2 in NMED's "Approval with Modifications Hydrocarbon Seep Interim Measures 2020 Fourth Quarter Status Report", dated March 30, 2021, fluid levels are taken 24 hours after vacuum truck extractions and are presented in Tables 4A through 4F.

Fluid recovery was attempted at the listed wells: MKTF-3, MKTF-5, MKTF-6, MKTF-7, MKTF-8, MKTF-10, MKTF-13, MKTF-14, MKTF-15, MKTF-17R, MKTF-19, MKTF-22,

Mr. Ricardo Maestas
January 23, 2024
Page 4

MKTF-31, MKTF-39, MKTF-49, OW-55, OW-58A, OW-61, OW-65, OW-66, RW-1, RW-2R, RW-5, and RW-6. Weather during the month of December prevented vacuum trucks from driving on the service roads leading to MKTF-6, MKTF-7, MKTF-8, MKTF-13, MKTF-14, RW-5, and RW-6.

These above wells were chosen for fluid recovery based on historical and persistent presence of recoverable SPH. Wells containing less than 0.1 ft of product for the duration of the quarter will be removed from fluid recovery. Wells measuring more than 1 ft of SPH will be added to the extraction list. Accordingly, for the fourth quarter of 2023, no wells will be removed from vacuum truck recovery. While GWM-1 has more than 1 ft of SPH, it will not be added to the fluid recovery list because it is inaccessible to a vacuum truck. Fluid recovery will continue to be evaluated at the end of each quarter.

4th Quarter 2023 IM Activities

Below is a list of activities that are associated with ongoing IM activities that are planned for the 4th quarter 2023.

- **Monitoring** – Monthly groundwater gauging will continue during the 4th quarter of 2023. The water seep near the 90-day pad will be monitored for SPH monthly.
- **Hydrocarbon Seep Area Source Control** – Groundwater extraction of the Hydrocarbon Seep Area will be conducted with vacuum truck until issues with the groundwater extraction system are resolved.
- **Borrow Pit Seep Area** – The Borrow Pit Seep Area will be pumped continuously using the groundwater extraction system. Vacuum truck recovery will take place weekly in BPS-3, BPS-6, BPS-7 as conditions allow.
- **Investigations** – The following investigative activities and reports that pertain to seeps and releases in the area of the Hydrocarbon Seep Area have been completed or are expected to be scheduled for 2024, pending NMED approval of work plans.
 - **AOC 35** – An Investigation Work Plan (IWP) for Area of Concern (AOC) 35, which includes the area around the Marketing Tanks and the Truck Loading Racks, was approved with modifications on September 12, 2019. However, this investigation was postponed for revision due to the gasoline leak in the Truck Loading area found on October 27, 2019. The revised AOC 35 IWP Number 2 was submitted to NMED on September 1, 2021. NMED's Disapproval Revised Investigation Work Plan No. 2 Area of Concern 35 was received on October 20, 2021. The revised IWP and response to disapproval comments was submitted to NMED on April 11, 2022. NMED responded with an Approval with Modifications on December 12, 2022. A response to the Approval with Modifications was submitted to NMED on March 15, 2023. NMED's Disapproval Process Sewer IWP contained in AOC 35 was received on October 24, 2021. The Process Sewer IWP Response to Disapproval was submitted to NMED on January 11, 2024.

Mr. Ricardo Maestas
January 23, 2024
Page 5

- **OW-58A** – A letter requesting an interim measure approval from NMED to add a groundwater extraction system in OW-58A (Figure 3) to slow the northern progress of SPH plume was submitted to NMED October 11, 2023. NMED responded to the “North-Eastern Boundary Control Work Plan (OW-58A)” with an Approval with Modifications on October 23, 2023. The revised IWP and response to approval with modifications was submitted to NMED on October 25, 2023. The Refinery will move forward to implement a groundwater extraction system in OW-58A.

The Refinery received NMED’s response to the 1st through 4th quarter 2022 Status Reports on January 17, 2024, and January 18, 2024. These comments will be addressed in the 1st quarter 2024 Status Report.

If you have any questions or comments regarding the information contained herein, please contact Mr. John Moore at (505) 879-7643 or Ms. Kateri Luka at (714) 713-1218.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery

BP-PZ-4	12/13/2023	4	9.45	10.91	1.46

Notes:

BP-PZ - Borrow Pit Piezometer

BPS - Borrow Pit Sump

bs - below stick up

ft - feet

in - inches

ND - not detected

NM - not measured

SPH - separate phase hydrocarbon

TABLE 2B. SUMMARY OF BORROW PIT INTERIM MEASURE RECOVERY DATA
WESTERN REFINING SOUTHWEST, LLC
D/B/A MARATHON GALLUP REFINERY, GALLUP, NEW MEXICO

Date/Time	Number of Starts Starts/month	Total System (BPS-1, BPS-2, BPS-3, BPS-4, BPS-5, BPS-8)					
		Total Volume Recovered (gal)	Cumulative Volume Recovered (gal)	Total SPH Recovered (gal)	Cumulative SPH Recovered (gal)	Total Water Recovered (gal)	Cumulative Water Recovered (gal)
March 2023	18	296	296	80	80	216	216
1st Quarter 2023 Totals	18	296	296	80	80	216	216
April 2023	26	352	648	113	193	239	455
May 2023	57	772	1,419	249	442	523	978
June 2023	720	5,001	11,636	564	2,672	4,437	8,964
2nd Quarter 2023 Totals	803	6,125	11,636	926	2,672	5,199	8,964
July 2023	744	5,041	16,677	1,371	4,043	3,670	12,634
August 2023	744	4,996	21,673	924	4,968	4,072	16,706
September 2023	720	4,746	26,419	899	5,867	3,846	20,552
3rd Quarter 2023 Totals	2,208	14,783	26,419	3,195	5,867	11,588	20,552
October 2023	744	4,671	31,089	2,105	7,971	2,566	23,118
November 2023	720	3,155	29,029	1,412	7,717	1,744	21,312
December 2023	744	3,989	33,018	1,313	9,030	2,676	23,988
4th Quarter 2023 Totals	2,208	11,815	33,018	4,829	9,030	6,986	23,988

Notes:

Values for the 1st through 3rd quarter 2023 were updated from previous estimates using revised technique for calculation.

Volumes are calculated based on combined flow from BPS-1, BPS-2, BPS-3, BPS-4, BPS-5, and BPS-8. The flow meters do not distinguish between SPH and water. SPH is estimated based on well volume and well fluid levels.

SPH - separate phase hydrocarbon

BPS - Borrow Pit Sumps

gal - gallons

Notes:

¹ = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

ft-bgs = feet below ground surface

SPH = separate phase hydrocarbon

NA = Not applicable

ND = Not detected

NM = Not measured

Dry indicates no fluid was detected

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions.

Notes:

¹ = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

ft-bgs = feet below ground surface

SPH = separate phase hydrocarbon

NA = Not Applicable

ND = Not Detected

NM = Not Measured

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions

Dry indicates no fluid was detected

RW-6	11/15/2023	33.71	37.50	Post Recovery	3.79							
						Total Extracted (gal)	37.75	25.47	12.28			

Notes:

¹ = depth recorded from the top of the well casing

DTP = Depth to product

DTW = Depth to water

SPH = Separate Phase Hydrocarbon

NA = Not Applicable

ft = feet

gal = gallons

in = inches

Vac = Vacuum
