Re: Hilcorp Energy Company – Discharge Permit Application Proof of Public Notice for San Juan Gas Plant, San Juan County, New Mexico

Mr. Stone:

Ensolum, LLC (Ensolum) on behalf of Hilcorp Energy Company (Hilcorp), is submitting the discharge permit application proof of public notifications for the San Juan Gas Plant in accordance with 20.6.2.3108(B) NMAC. Please find attached photographs of the notice posted at the front gate of the San Juan Gas Plant and at the Bloomfield Public Library, certified registered mail receipts for the mailings, the list of property owners within 1/3 mile of the facility boundary, proof of publication in the Tri-City Record newspaper, and an affidavit of the newspaper publication.

Please note that Hilcorp attempted to post the public notice at the Bloomfield New Mexico Post Office, but the post office would not grant permission for posting. NMOCD advised Hilcorp to post at an alternative location, such as the public library, which was completed.

Should you have any questions or need any additional information, please contact Maggie Hunter at (701) 580-7960 or mhunter@ensolum.com.

Thank you,

A handwritten signature in black ink that reads "Maggie Hunter".

Maggie Hunter
Senior Geologist

NOTICE OF PUBLICATION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20.6.2.3106 of the New Mexico Administrative Code), the following discharge permit application has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOCD"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3441:

NMOCD Discharge Permit Number GW-XXX
Hilcorp Energy Company
San Juan Gas Plant
1001 Arizona
Bloomfield, New Mexico 87413
N36.732544, W107.966467
NW ¼, NW ¼ Section 14, Township 29 North, Range 11 West
Kevin Reese, (505) 632-4907 kreese@hilcorp.com

Hilcorp announces the submittal of an application for potential unintended discharges at the San Juan Gas Plant (Facility) located approximately 1.5 miles northeast of Bloomfield, New Mexico. The Facility is designed to extract hydrocarbon liquids from a natural gas inlet stream operating at approximately 550 million cubic feet per day (MMCFD) with two cryogenic trains, each rated at 275 MMCFD. Produced natural gas is delivered to the Facility via Hilcorp and Enterprise gas gathering pipeline. Liquid hydrocarbons including ethane, propane, butane, and natural gasoline are removed from the inlet gas using a cryogenic extraction process. Processed natural gas (residue) is delivered off site to respective vendors. Recovered liquids are transported to a fractionator in southeast Texas via the Enterprise Mid-America Pipeline system. The Facility is a gas processing plant, through which natural gas and condensate from nearby oil and gas production facilities are transported by pipeline for treatment and processing. The discharge permit application includes a description of materials stored and used at the Facility and any waste generated for off-site disposal. Groundwater at the facility is estimated to be less than 50 feet, but deeper than 9 feet and contains total dissolved concentrations (TDS) of approximately 1,125 ppm milligrams per liter (mg/l). The discharge permit addresses how liquids and solid waste will be handled, stored, and disposed of, including procedures to prevent unintended discharge. Response actions and abatement requirements for spills and leaks are addressed.

The NMOCD has determined the application is administratively complete and is in the process of preparing a draft permit. The NMOCD shall post a notice on its website and distribute notice of the submittal of the discharge application to affected local, state, federal, tribal, or pueblo government agency, political subdivisions, ditch associations, and land grants as identified by the department and persons on a general and facility-specific list maintained by the department who have requested notice of discharge permit applications. Interested people may obtain information, submit comments, and request to be placed on a facility-specific mailing list for future notices. The NMOCD will also accept comments and statements of interest regarding the draft permit and will create a facility-specific mailing list for people who wish to receive future notices. Prior to ruling on any proposed permit, the Director shall allow at least 30 days after the draft permit is posted, during which time interested people may submit comments.

People interested in obtaining further information, submitting comments, or requesting to be on a facility-specific mailing list for future notices may contact the Oil Conservation Division contact listed below:

AVISO DE PUBLICACIÓN

Por la presente se notifica que, de conformidad con las Regulaciones de la Comisión de Control de Calidad del Agua de Nuevo México (20.6.2.3106 del Código Administrativo de Nuevo México), se ha presentado la siguiente solicitud de permiso de descarga al Director de la New Mexico Oil Conservation Division ("NMOCD"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, teléfono (505) 476-3441:

Número de permiso de descarga de NMOCD GW-XXX
Hilcorp Energy Company
Planta de gas de San Juan
1001 Arizona
Bloomfield, New Mexico 87413
N36.732544, W107.966467
NW 1/4, NW 1/4 Section 14, Township 29 North, Range 11 West
Kevin Reese, (505) 632-4907 kreese@hilcorp.com

Hilcorp anuncia la presentación de una solicitud para posibles descargas no intencionales en la Planta de Gas de San Juan (Instalación) ubicada aproximadamente a 1.5 millas al noreste de Bloomfield, Nuevo México. La instalación está diseñada para extraer líquidos de hidrocarburos de una corriente de entrada de gas natural que opera a aproximadamente 550 millones de pies cúbicos por día (MMCFD) con dos trenes criogénicos, cada uno con una capacidad nominal de 275 MMCFD. El gas natural producido se entrega a la instalación a través del gasoducto de recolección de Hilcorp y Enterprise. Los hidrocarburos líquidos, como el etano, el propano, el butano y la gasolina natural, se eliminan del gas de entrada mediante un proceso de extracción criogénica. El gas natural procesado (residuo) se entrega fuera del sitio a los proveedores respectivos. Los líquidos recuperados se transportan a un fraccionador en el sureste de Texas a través del sistema Enterprise Mid-America Pipeline. La instalación es una planta de procesamiento de gas, a través de la cual el gas natural y el condensado de las instalaciones de producción de petróleo y gas cercanas se transportan por tubería para su tratamiento y procesamiento. La solicitud de permiso de descarga incluye una descripción de los materiales almacenados y utilizados en la Instalación y cualquier desecho generado para su eliminación fuera del sitio. Se estima que el agua subterránea en la instalación tiene menos de 50 pies, pero más de 9 pies de profundidad y contiene concentraciones disueltas totales (TDS) de aproximadamente 1,125 ppm miligramos por litro (mg/l). El permiso de descarga aborda cómo se manejarán, almacenarán y eliminarán los líquidos y los desechos sólidos, incluidos los procedimientos para evitar la descarga involuntaria. Se abordan las acciones de respuesta y los requisitos de reducción de derrames y fugas.

El NMOCD ha determinado que la solicitud está administrativamente completa y está en el proceso de preparar un borrador de permiso. El NMOCD publicará un aviso en su sitio web y distribuirá un aviso de la presentación de la solicitud de descarga a la agencia gubernamental local, estatal, federal, tribal o pueblo afectada, subdivisiones políticas, asociaciones de zanjas y concesiones de tierras según lo identifique el departamento y las personas en una lista general y específica de la instalación mantenida por el departamento que hayan solicitado solicitudes de aviso de permisos de descarga. Las personas interesadas pueden obtener información, enviar comentarios y solicitar ser incluidas en una lista de correo específica de la instalación para recibir avisos futuros. El NMOCD también aceptará comentarios y declaraciones de interés con respecto al borrador del permiso y creará una lista de correo específica de la instalación para las personas que deseen recibir avisos futuros. Antes de pronunciarse sobre cualquier permiso propuesto, el Director deberá esperar al menos 30 días después de que se publique el borrador del permiso, durante los cuales las personas interesadas pueden presentar comentarios.

Las personas interesadas en obtener más información, enviar comentarios o solicitar estar en una lista de correo específica de la Instalación para recibir avisos futuros pueden comunicarse con el contacto de la División de Conservación de Petróleo que se indica a continuación:

NOTICE OF PUBLICATION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20.2.3.106) of the New Mexico Administrative Code, the following discharge permit application has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOCD"), 1220 St. Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 478-3447:

NMOCD Discharge Permit Number GW-XXXX
Hilcorp Energy Company
San Juan Gas Plant
1981 Arizona
Bloomfield, New Mexico 87413
630.73344, W187.36487
NW 1/4, NW 1/4 Section 14, Township 23 North, Range 31 West
Kevin Reese, (505) 832-4387 kreeseg@hilcorp.com

Hilcorp announces the submittal of an application for potential unattended discharges at the San Juan Gas Plant (Facility) located approximately 1.8 miles northeast of Bloomfield, New Mexico. The Facility is designed to extract hydrocarbon liquids from a natural gas well stream operating at approximately 650 million cubic feet per day (MMCFD) with two cryogenic trains, each rated at 275 MMCFD. Produced natural gas is delivered to the Facility via Hilcorp and Enterprise gas gathering pipelines. Liquid hydrocarbons including ethane, propane, butane, and natural gasoline are removed from the well gas using a cryogenic extraction process. Processed natural gas (residue) is delivered off site to respective vendors. Recovered liquids are transported to a fractionator in southeast Texas via the Enterprise Mid-America Pipeline system. The Facility is a gas processing plant, through which natural gas and condensate from nearby oil and gas production basins are transported by pipeline for treatment and processing. The discharge permit application includes a description of materials stored and used at the Facility and any waste generated for on-site disposal. Groundwater at the Facility is estimated to be less than 50 feet, but deeper than 9 feet and contains total dissolved concentrations (TDC) of approximately 1-125 ppm inorganic per liter (mg/L). The discharge permit addresses how liquids and solid waste will be handled, stored, and disposed of, including procedures to prevent unattended discharge. Response actions and abatement requirements for spills and leaks are addressed.

The NMOCD has determined the application is administratively complete and is in the process of preparing a draft permit. The NMOCD will post a notice on its website and distribute notice of the submittal of the discharge application to affected local, state, federal, tribal, or public government agency, political subdivisions, state associations, and other groups as identified by the department and persons on a general and facility-specific list maintained by the department who have requested notice of discharge permit applications. Interested people may obtain information, submit comments, and request to be placed on a facility-specific mailing list for future notices. The NMOCD will also accept comments and statements of interest regarding the draft permit and will create a facility-specific mailing list for people who wish to receive future notices. Prior to ruling on any proposed permit, the Director shall allow at least 30 days after the draft permit is posted, during which time interested people may submit comments.

People interested in obtaining further information, submitting comments, or requesting to be on a facility-specific mailing list for future notices may contact the Oil Conservation Division contact listed below:

AVISO DE PUBLICACIÓN

Por la presente se notifica que, de conformidad con las Reguaciones de la Comisión de Control de Calidad del Agua de Nuevo México (CC 8.2.3106 del Código Administrativo de Nuevo México), se ha presentado la siguiente solicitud de permiso de descarga al Director de la New Mexico Oil Conservation Division (NMOCD), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, teléfono (505) 476-3441:

Número de permiso de descarga de NMOCD GW-000
Hiborg Energy Company
 Planta de gas de San Juan
 1981 Arizona
 Bloomfield, New Mexico 87419
 808.725.544, 9187.248447
 NW 14, NW 14 Section 14, Township 29 North, Range 11 West
 Kevin Reese, (505) 632-4307 kreseeh@hiborg.com

Hiborg anuncia la presentación de una solicitud para posibles descargas de hidrocarburos en la Planta de Gas de San Juan (instalación ubicada aproximadamente a 1.3 millas al noroeste de Sycamore, Nuevo México. La instalación está diseñada para extraer líquidos de hidrocarburos de una corriente de arrieta de gas natural que opera a aproximadamente 560 millones de pies cúbicos por día (MPCD) con dos líneas separadas, cada una con una capacidad nominal de 275 MFCFD. El gas natural presurizado se dirige a la instalación a través del gasolúleo de recolección de Hiborg y Enterprise. Los hidrocarburos ligeros, como el etano, el propano, el butano y la gasolina natural, se eliminan del gas de arrieta mediante un proceso de extracción criogénica. El gas natural presurizado residual se dirige fuera del sitio a los productores respectivos. Los líquidos recuperados se transportan al sitio de procesamiento en la planta de gas de San Juan Enterprise (New Mexico Pipeline). La instalación es una planta de procesamiento de gas, a través de la cual el gas natural y el condensado de las instalaciones de producción de petróleo y gas se envían al transporte por tubería para su tratamiento y procesamiento. La solicitud de permiso de descarga incluye una descripción de los materiales almacenados y liberados en la instalación y cualquier desecho generado para su eliminación fuera del sitio. Se afirma que el agua subterránea en la instalación tiene menos de 30 pies, pero más de 9 pies de profundidad y contiene concentraciones disueltas totales (TDS) de aproximadamente 1,125 ppm (miligramos por litro) (mg/L). El permiso de descarga solicitó como se han programado, autorización y eliminación de líquidos y los desechos sólidos, incluidos los procedimientos para evitar la descarga involuntaria. Se adjuntan las acciones de respuesta y los requisitos de reducción de derrames y fugas.

El NMOCD ha determinado que la solicitud está administrativamente completa y está en el proceso de preparar un contrato de permiso. El NMOCD publicará un aviso en los días lunes y viernes en el sitio de la presentación de la solicitud de descarga a la agencia gubernamental local, estatal, federal, tribal o pueblo asociada, asociaciones portales, asociaciones de carga y conexiones de tierra según lo identifique el solicitante y las personas en una zona geográfica y específica de la instalación comentada por el departamento que hayan solicitado solicitudes de aviso de permisos de descarga. Las personas interesadas pueden obtener información, enviar comentarios y solicitar ser incluidos en una lista de correo específica de la instalación para recibir avisos futuros. El NMOCD también aceptará comentarios y declaraciones de interés con respecto al contrato del permiso y emitirá una lista de correo específica de la instalación para las personas que deseen recibir avisos futuros. Antes de pronunciarse sobre cualquier permiso propuesto, el Director deberá esperar al menos 30 días después de que se publique el contrato del permiso, durante los cuales las personas interesadas pueden presentar comentarios. Las personas interesadas en obtener más información, enviar comentarios o solicitar estar en una lista de correo específica de la instalación para recibir avisos futuros pueden comunicarse con el contacto de la División de Conservación de Petróleo que se indica a continuación:
