Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- ☐ A scaled site and sampling diagram as described in 19.15.29.11 NMAC Release captured in secondary containment
- ☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- ☐ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- ☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Remediation Summary Closure Request

Date of request: 9/18/2020
Site Name: Mobley SWD #1
Terracon Project No: AR207152
Site GPS: Latitude 32.29711°
Longitude -103.92169°

Remediation Summary

Under the direction of Terracon personnel, a sub-contractor executed hydro vacuuming of released fluids within the above-mentioned lined facility. Upon completion of these remedial efforts, a final inspection was conducted by a Terracon environmental representative on July 22, 2020. During the visual reconnaissance, Terracon confirmed that residual fluids were removed from the liner. The removed materials were taken to an approved New Mexico Oil and Conservation District (NMOCD) disposal facility. The liner was inspected for damage. The liner was observed to maintain its integrity and was free of residual fluids. The NMOCD was contacted for their liner inspection on October 8, 2020

Recommendation / Request for Closure

Based observations during the final inspection at the site, additional remediation and/or investigation is not warranted at the Mobley SWD #1 location. Terracon requests closure of the release incident case from the NMOCD. Please see the attached Final C-141 and pictures taken during the final inspection.

Please contact either of the undersigned at (806) 300-0140 if you have any questions regarding this project.
