#### Cause of Release

The 1" nipple of the Wye Strainer failed, resulting in the release of approx.. 655 bbl. of produced water into the lined, secondary containment. The source was isolated immediately upon discovery and trucks were dispatched to recover all standing fluid. The initial inspection showed that the liner and containment maintained integrity and the entire release volume was contained. A formal notification will be sent out prior to a liner integrity inspection.

In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
