UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Federal 12-1H CTB**Flare Date:** 12/20/2021**Duration of event:** 6 Hours 40 Minutes**MCF Flared:** 154**Start Time:** 01:50 AM**End Time:** 08:30 AM**Cause:** Downstream Activity Issue > Energy Transfer > James Ranch Station Down**Method of Flared Gas Measurement:** Gas Flare Meter**Well API Associated with Facility:** 30-015-41344 Federal 12 002H

Comments: This upset event was not caused by any wells associated with the facility. This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable issue that was beyond the owner/operator's control, and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices.

1. Reason why this event was beyond Operator's control:

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices.

In this case, the high line pressure spike in Energy Transfer's pipeline impacted Oxy's ability to send gas to their plant, as their downstream facility compression equipment was unable to handle the gas loads sent to them because of Energy Transfer's compressor station, James Ranch, was having facility equipment issues. Until Energy Transfer's downstream facilities were able to handle the volume of gas sent to them, the spike in line pressure forced Oxy's upstream facility to route its stranded gas to a flare, as it was not able to push all its gas into Enterprise's gas service system pipeline. No advance warning was provided to Oxy personnel from Energy Transfer regarding issues with their gas sales system pipeline or issues with their downstream facility.

2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as part of the overall steps to limit duration and magnitude of flaring. In this case, the high line pressure spike in Energy Transfer's gas service system pipeline impacted Oxy's ability to send gas to their plant, as their associated downstream facility compression station, James Ranch, was having equipment issues, which in turn caused Oxy's upstream facility to route its stranded gas to a flare, as it was not able to push its gas into Energy Transfer's gas sales service system pipeline due to the restrictions of gas flow placed on their gas system pipeline.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an Energy Transfer gas flow pipeline restriction or shut-in, due to high line pressure spikes in their gas system pipeline, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening or reoccurring. Energy Transfer's downstream facility issues will re-occur from time to time and may trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When Energy Transfer's downstream facilities and/or equipment has issues or greatly struggles to handle the volume of gas being sent to them by Oxy, Energy Transfer then restricts Oxy's ability to send gas, which then allows no other option but for Oxy to route its stranded gas not pushed into the Energy Transfer gas system pipeline, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to communicate frequently with Energy Transfer personnel during these types of situations and continually monitor the Energy Transfer line pressure in order to make necessary adjustments to Oxy's own compression equipment, when possible, until Energy Transfer's gas system pipeline is returned to normal working service.

QUESTIONS

Action 70540

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 70540
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Prerequisites	
<i>Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.</i>	
Incident Well	Not answered.
Incident Facility	[fAPP2126663359] FEDERAL 12-1H BATTERY

Determination of Reporting Requirements	
<i>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.</i>	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
<i>An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.</i>	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Downstream Activity Issue > Energy Transfer > James Ranch Station Down

Representative Compositional Analysis of Vented or Flared Natural Gas	
<i>Please provide the mole percent for the percentage questions in this group.</i>	
Methane (CH4) percentage	73
Nitrogen (N2) percentage, if greater than one percent	2
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
<i>If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.</i>	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

Action 70540

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:
	16696
	Action Number:
	70540
Action Type:	
[C-129] Venting and/or Flaring (C-129)	

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	12/20/2021
Time vent or flare was discovered or commenced	01:50 AM
Time vent or flare was terminated	08:30 AM
Cumulative hours during this event	7

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 154 Mcf Recovered: 0 Mcf Lost: 154 Mcf]
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	Yes
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	[316048] ENERGY TRANSFER PARTNERS, LP
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, the high line pressure spike in Energy Transfer's pipeline impacted Oxy's ability to send gas to their plant, as their downstream facility compression equipment was unable to handle the gas loads sent to them because of Energy Transfer's compressor station, James Ranch, was having facility equipment issues. Until Energy Transfer's downstream facilities were able to handle the volume of gas sent to them, the spike in line pressure forced Oxy's upstream facility to route its stranded gas to a flare, as it was not able to push all its gas into Enterprise's gas service system pipeline. No advance warning was provided to Oxy personnel from Energy Transfer regarding issues with their gas sales system pipeline or issues with their downstream facility.
Steps taken to limit the duration and magnitude of vent or flare	It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as part of the overall steps to limit duration and magnitude of flaring. In this case, the high line pressure spike in Energy Transfer's gas service system pipeline impacted Oxy's ability to send gas to their plant, as their associated downstream facility compression station, James Ranch, was having equipment issues, which in turn caused Oxy's upstream facility to route its stranded gas to a flare, as it was not able to push its gas into Energy Transfer's gas sales service system pipeline due to the restrictions of gas flow placed on their gas system pipeline.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an Energy Transfer gas flow pipeline restriction or shut-in, due to high line pressure spikes in their gas system pipeline, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening or reoccurring. Energy Transfer's downstream facility issues will re-occur from time to time and may trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When Energy Transfer's downstream facilities and/or equipment has issues or greatly struggles to handle the volume of gas being sent to them by Oxy, Energy Transfer then restricts Oxy's ability to send gas, which then allows no other option but for Oxy to route its stranded gas not pushed into the Energy Transfer gas system pipeline, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to communicate frequently with Energy Transfer personnel during these types of situations and continually monitor the Energy Transfer line pressure in order to make necessary adjustments to Oxy's own compression equipment, when possible, until Energy Transfer's gas system pipeline is returned to normal working service.
