Cause of Release
Permitted Surface Waste Management Facility under NM-01-0009 Approved for use 1/27/1997 for Sunco Trucking Water Disposal Company. The nature and extent of what was placed in the landfarm is unknown, however, per permit conditions it was related to activities that took place for the Sunco Disposal #1 UICI-5 operations and no other outside waste was placed in the landfarm. Agua Moss, LLC has not utilized the landfarm since taking over operations 2/20/2012.

Was this a major release as defined by 19.15.29.7(A) NMAC? ☐ Yes ☒ No	If YES, for what reason(s) does the responsible party consider this a major release?
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)?	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☒ The source of the release has been stopped.
☒ The impacted area has been secured to protect human health and the environment.
☒ Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.
☒ All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?	83 (ft bgs)
Did this release impact groundwater or surface water?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☒ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☒ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☒ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☒ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☒ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☒ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☐ Yes ☒ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☒ No
Did the release impact areas **not** on an exploration, development, production, or storage site?	☐ Yes ☒ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: ***Each of the following items must be included in the report.***

- ☒ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- ☒ Field data
- ☒ Data table of soil contaminant concentration data
- ☒ Depth to water determination
- ☒ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- ☐ Boring or excavation logs
- ☒ Photographs including date and GIS information
- ☒ Topographic/Aerial maps
- ☒ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

Agua Moss

August 31, 2020

SUBJECT: PERMIT NM1-9-0, VADOSE ZONE RELEASE

Mr. Smith,

Agua Moss has been in the process of closing the landfarm at the Sunco facility for the past five years. Since Agua Moss took over operations in February 2012, there has been no new material accepted into the landfarm.

There have been soil sample results from the vadose zone indicating that a possible release has occurred. This is not a typical case because there is not a single instance to refer to as the cause of the release. All of the vadose zone sampling data since 2015 is compiled and analyzed in the attached report. The beginning date of 2015 was chosen because that is when the sampling procedure of using bail holes was implemented, and more consistent results followed. The sampling data is compared to the remediation standard per Table 1 of 19.15.29.12 NMAC (groundwater depth is evaluated in Appendix A), other constituents are compared to Table 1 of 40 CFR 261.24 and NMED Soil Screening Levels. All of the samples are below the standards; results are summarized in Tables 1 and 2 in the attached report.

Since this case differs from the typical release, we have applied and followed the release rule as best as we can according to the context of the situation. In the attached report, you will find our proposed work plan to evaluate the vadose zone exceedances per rule 19.15.29 NMAC. Under "Site Assessment" part 11, subsection A, paragraph 5b, horizontal delineation can be expressed in Figure 1, which maps out the location of all of the samples. The work plan proposes a method to delineate vertically the samples that exceeded 600 mg/kg chloride per paragraph 5c if that applies to this case since it is not a produced water spill.

Please advise if the work plan is suitable for this case. We will provide any additional information you need. If you have any questions or concerns, please contact me.

Sincerely,

Agua Moss

1.0 Introduction

This release assessment workplan summarizes vadose zone sampling conducted at the Agua Moss Surface Waste Management Facility, hereinafter the "Facility", and details proposed sampling procedures for delineation of chloride concentrations reported above 600 milligrams per kilogram (mg/kg) in accordance with 19.15.29 New Mexico Administrative Code (NMAC). Quarterly monitoring of the vadose zone is performed according to Subsection F of 19.15.36.15 NMAC and the *Facility Closure Plan: Permit NM1-9-0* dated June 1, 2015, which was approved by the New Mexico Oil Conservation Division (NMOCD) with amendments on July 1, 2015. A release response sampling event was performed in accordance with Paragraph (5) of Subsection E of 19.15.36.15 NMAC to address constituents of concern detected within the vadose zone during quarterly monitoring.

2.0 Remediation Standards Determination

The remediation standards for the site determined per 19.15.29 NMAC are selected by depth to groundwater with a concentration of less than 10,000 milligrams per kilogram (mg/kg) total dissolved solids (TDS) and several additional factors outlined in Paragraph (4) of Subsection (C) of 19.15.29.12 NMAC. A summary of the determination and supporting documents are included in Appendix A.

Closure criteria for the soils impacted at the release location are determined by the *"51 feet to 100 feet"* category of Table 1 of 19.15.29.12 NMAC. These remedial standards are as follows:

- 10 milligrams per kilogram (mg/kg) benzene per USEPA Methods 8021B or 8260B.
- 50 mg/kg total benzene, toluene, ethylbenzene, and xylenes (BTEX) per USEPA Method 8021B or 8260B;
- 1,000 mg/kg total petroleum hydrocarbons (TPH) as gasoline range organics (GRO) and diesel range organics (DRO) per USEPA Method 8015M;
- 2,500 mg/kg total petroleum hydrocarbons (TPH) as GRO, DRO, and mineral range organics (MRO) per USEPA Method 8015M; and
- 10,000 mg/kg chloride per United States Environmental Protection Agency (USEPA) Methods 300.0 or SM 4500-Cl B.

Per Subsection (c) of Paragraph (5) of Subsection A 19.15.29.11 NMAC, chlorides will be vertically delineated to 600 mg/kg.

For constituents that appear on Table 1 of 40 Code of Federal Regulations (CFR) 261.24(b), the constituents are remediated according to 40 CFR 261.24. Table 1 of 40 CFR 261.24 presents the maximum concentrations of contaminants for the toxicity characteristic as determined by USEPA Method 1311, Toxicity Characteristic Leaching Procedure (TCLP). Section 1.2 of USEPA Method 1311 allows for the use of total

Rule

Released to Imaging: 4/20/2022 10:09:22 AM

analysis, such as was performed for the samples at this site, if the analysis demonstrates that individual contaminants are not present in the waste, or present in levels that could not possibly exceed the regulatory threshold. The maximum theoretical leachate concentration is 1/20 of the total concentration per 60 Federal Register (FR) 66389, December 21, 1995. For ease of use, the applicable concentrations from Table 1 of 40 CFR 261.24 have been multiplied by 20 for comparison to analytical results in the analytical summary tables (Tables 1 and 2).

For constituents listed in Subsections A and B of 20.6.2.3103 NMAC, concentrations are compared to the New Mexico Environment Department Soil Screening Level (NMED SSL) for Residential Soils per the NMED *Risk Assessment Guidance for Site Investigations and Remediation, Volume I Soil Screening Guidance for Human Health Risk Assessments,* February 2019 (Revision 2, 6/19/19). Applicable NMED SSL concentrations for constituents listed in Subsections A and B of 20.6.2.3103 NMAC are provided in the analytical summary tables (Tables 1 and 2).

3.0 Field Activities

Agua Moss has performed quarterly monitoring since assumption of operation of the Facility in February 2012. Field sampling methods for the vadose zone were modified in the 1st Quarter of 2015 to the use of bail holes to reduce apparent cross contamination of the vadose zone soil by treatment zone soil. This resulted in more consistent and reliable data from quarterly sampling that is suitable for analysis in this report.

Monitoring for the 1st and 2nd Quarter of 2015 was performed by Envirotech Inc. (Envirotech). Monitoring for the 3rd Quarter 2015 to 2nd Quarter 2016 was performed by Terracon Consultants, Inc. (Terracon). Rule Engineering, LLC (Rule) assumed quarterly monitoring in the 3rd Quarter of 2016. Sampling frequency and laboratory analysis was performed according to the *Facility Closure Plan* with some irregularities. These irregularities include the collection of more samples than required in the 2nd Quarters of 2015 and 2016 as well as occasional inconsistencies in constituent analysis.

Additionally, a release response sampling event was performed on July 1, 2019, to address detections of constituents of concern in the vadose zone during previous quarterly monitoring events in accordance with Paragraph (5) of Subsection E of 19.15.36.15 NMAC (E5 Response).

4.0 Soil Sampling

Sample collection was performed utilizing a backhoe to scrape an area of treatment zone soils away from the sampling area to minimize cross contamination potential. A smaller area was then excavated into the vadose zone to depths ranging from 3 to 5 feet below ground surface (bgs) where a discrete sample was collected. Soil samples were placed into laboratory supplied glassware, labeled, and maintained on ice until delivery to Envirotech Analytical Laboratory in Farmington, New Mexico or Hall Environmental Analysis Laboratory in Albuquerque, New Mexico.

A compilation of the quarterly monitoring sample locations and E5 Response sample locations is illustrated on Figure 1.

5.0 Laboratory Analytical Results and Evaluation

Laboratory analytical results are compared to (1) remediation Standards per Table 1 of 19.15.29.12 NMAC, (2) Table 1 of 40 CFR 261.24, and (3) NMED SSLs for Residential Soils as appropriate. Laboratory analytical results for quarterly monitoring are summarized in Table 1 and for E5 Response sampling in Table 2. Analytical laboratory reports are included in Appendix B.

Laboratory analytical results report all constituent concentrations below the applicable remediation standard, toxicity characteristic concentration, or NMED SSL for all constituents. Laboratory reporting limits are below the applicable standards. Sulfate, alkalinity, pH, and radioactivity (as Radium-226 and Radium-228) do not have defined remediation standards, toxicity characteristic concentrations, or NMED SSLs. As the alkalinity and pH values greater than 7 standard units indicate, sulfates are not creating acidic soils and concentrations are not sufficient to impact the groundwater present at greater than 50 feet bgs. Background radioactivity as radium-226 and radium-228 are defined in the approved Facility Closure Plan for the Facility as 3.5395 picoCuries per gram (pCi/g) and 2.004 piC/g, respectively. Laboratory analytical results report all Radium-226 and Radium-228 below these background concentrations.

Chloride concentrations are reported above 600 mg/kg for vertical delineation in nine samples with exceedance concentrations ranging from 610 to 1,900 mg/kg. These samples are indicated in red font on Figure 1 and bold font with blue shading on Tables 1 and 2.

6.0 Proposed Chloride Delineation

Proposed vertical delineation of chlorides consists of the advancement of a test pit in each of the nine locations with chloride concentrations exceeding 600 mg/kg. Each test pit will be excavated using a backhoe and performed in the same manner of quarterly monitoring sampling. An area of treatment zone soils will be scraped away from the sampling area to minimize the potential of cross contamination. Samples will be collected at approximately 2-foot intervals to the total depth of the test pit which will extend at least one foot below the original sample depth.

Samples will be field screened for electrical conductivity of a 4:1 distilled water/soil solution to estimate relative chloride concentrations. Excavation and sampling will continue until electrical conductivity indicates sufficiently decreasing chloride concentrations or to the limits of the equipment.

At least two samples will be selected from each test pit for laboratory analysis. The two samples will include the sample interval exhibiting the highest electrical conductivity and the sample from the bottom of the test pit. Soil samples will be placed into laboratory

Received by OCD: 9/8/2020 4:26:09 PM

supplied glassware, labeled, and maintained on ice until delivery to Hall Environmental Analysis Laboratory in Albuquerque, New Mexico. Each sample will be analyzed for chloride using USEPA Method 300.0.

Based on laboratory results, additional delineation will be performed if warranted or a closure report summarizing the delineation procedures and results will be submitted to the NMOCD.

7.0 Closure and Limitations

This workplan has been prepared for the exclusive use of Agua Moss and is subject to the terms, conditions, and limitations stated in Rule's report and Service Agreement with Agua Moss. All work has been performed in accordance with generally accepted professional environmental consulting practices. No other warranty is expressed or implied.

Notes: bgs - below ground surface
NMED SSL - New Mexico Environment Department Soil Screening Level
mg/kg - milligrams per kilogram
mg/L - milligrams per liter
BTEX - benzene, ethylbenzene, toluene, and xylene
TPH - total petroleum hydrocarbons
GRO - gasoline range organics
DRO - diesel range organics
MRO - mineral oil range organics
†Total TPH value per Method 418.1 when no value reported for MRO per Method 8015
*Per Table 1 of 40 CFR 261.24(b), value multiplied by 20
*New Mexico Environment Department *Risk Assessment Guuidance for Site Investigations and Remediation, Volume I Soil Screening Guidance for Human Health Risk Assessment*, February 2019 (Rev. 2, 6/19/19)
***Per Table 1 of 19.15.29.12 NMAC, based on category "51 feet to 100 feet" depth to groundwater

1.00 Value exceeds the 20:1 Toxicity Characteristic, NMED SSL, or the remediation standard

<1.0 Value is below the 20:1 Toxicity Characteristic, NMED SSL and remediation standard, but is above the 600 mg/kg delineation concentration for chloride

J - Analyte detected below practical quantitation limit
S - % Recovery outside of range due to dilution or matrix
D - Analyte reporting limit increased due to sample matrix

NMED SSL - New Mexico Environment Department Soil Screening Level
mg/kg - milligrams per kilogram
mg/L - milligrams per liter
su - standard units
NMOCD - New Mexico Oil Conservation Division
BTEX - benzene, ethylbenzene, toluene, and xylene
TPH - total petroleum hydrocarbons
GRO - gasoline range organics
DRO - diesel range organics
MRO - mineral oil range organics

1.00 Value exceeds the 20:1 Toxicity Characteristic, NMED SSL, or the remediation standard

<1.0 Value is below the 20:1 Toxicity Characteristic, NMED SSL and remediation standard, but is above the 600 mg/kg delineation concentration for chloride

J3 - The associated batch QC was outside the established quality control range for precision
J6 - The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Closure Criteria Determination
Agua Moss Surface Waste Management Facility

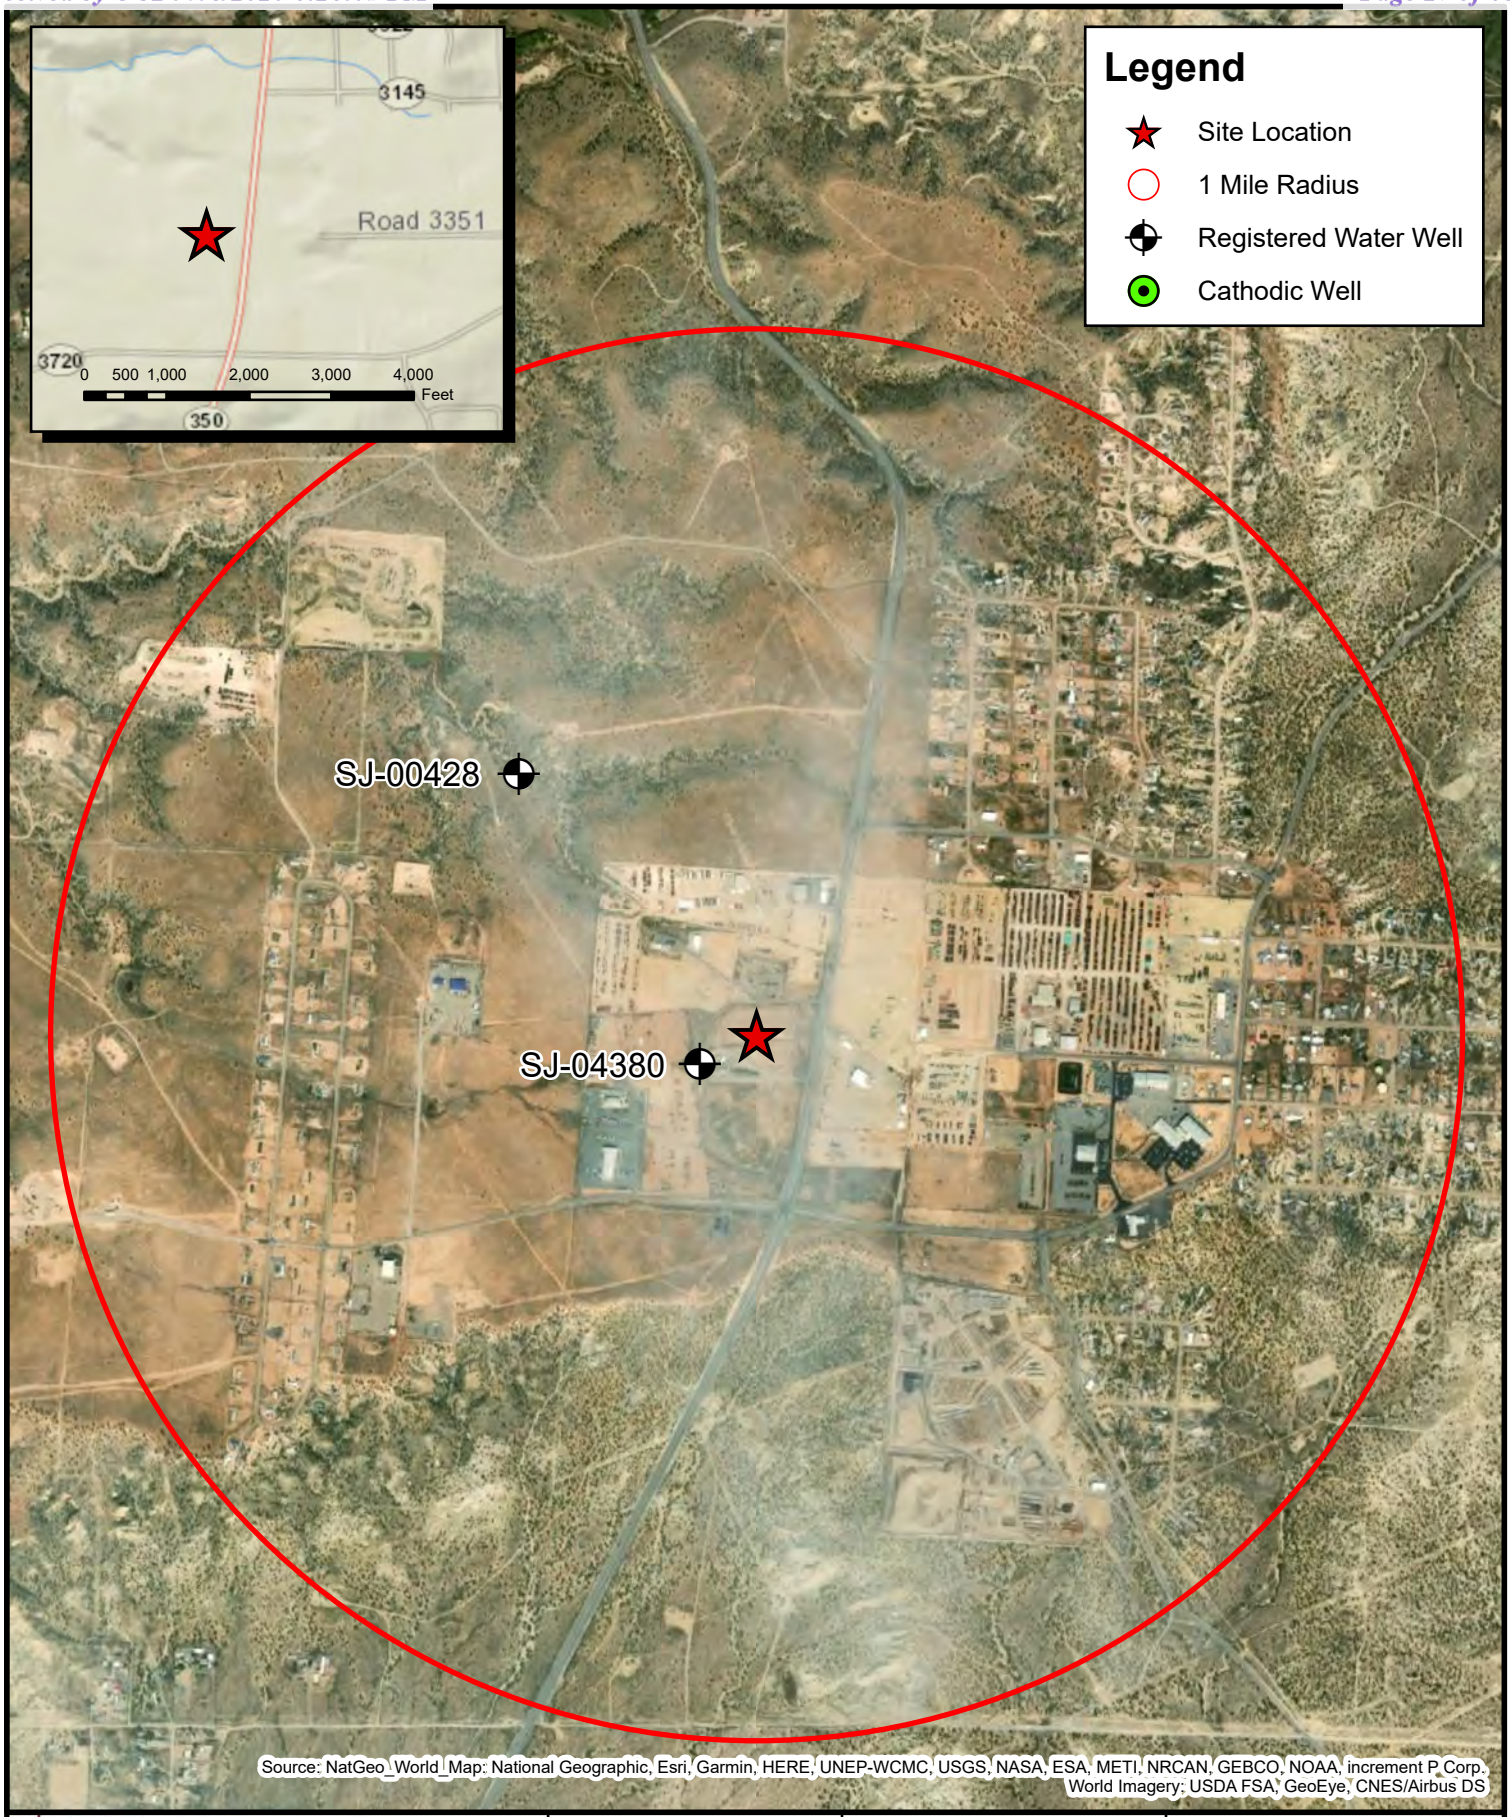

A review of the release site characteristics based on Paragraph (4) of Subsection (C) of 19.15.29 NMAC, concluded that site closure criteria are determined by the ***"51 feet to 100 feet"*** category of Table 1.

The release site characteristics are as follows:

- Depth to groundwater at the site is anticipated to be approximately 83 feet below ground surface based the measured depth to water of the onsite monitoring well MW-1 and on the area's geology and geomorphology.
    - o A search of the New Mexico Office of the State Engineer (NMOSE) Water Rights Reporting System reported four points of diversion (POD) within Sections 1, 2, 3, 10, 11 and 12 of Township 29 North and Range 12 West and nine PODs within Sections 34, 35, and 36 of Township 30 North Range 2 West. Of these PODs, only two, SJ-04380 and SJ-00428, are within a 1-mile radius of the site. Point of diversion SJ-04380 is monitoring well MW-1 and is located immediately southwest of the landfarm with a depth to water of approximately 83 feet below ground surface (bgs). Point of diversion SJ-00428 is appears to be located approximately 3,560 feet to the northwest of the project site in an ephemeral wash at an elevation approximately 76 feet lower than the landfarm with a reported depth to water of 25 feet bgs.
    - o A search of the New Mexico Energy, Minerals and Natural Resources Department (EMNRD) Oil Conservation Division (OCD) online imaging database yielded three cathodic well records from the same Sections. Reported depths to groundwater ranged from 90 feet to 170 feet below ground surface on these cathodic well reports.

The location is **not** within:

- 300 feet of any continuously flowing watercourse or any other significant water course – the nearest significant watercourse being a tributary to Hargis Arroyo approximately 500 feet to the north of the site.
- 200 feet of any lakebed, sinkhole or playa lake.
- 300 feet of an occupied permanent residence, school, hospital, institution, or church.
- 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes.
- 1,000 feet of any fresh water well or spring.
- incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978 as amended.
- 300 feet of a wetland
- the area overlying a subsurface mine.
- an unstable area.
- 100-year floodplain.

- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 7/27/2020 at 4:38 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

RE: Agua Moss Landfarm OrderNo.: 1509E41

Dear Mark Hillier:

Hall Environmental Analysis Laboratory received 3 sample(s) on 9/29/2015 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss OrderNo.: 1512322

Dear Mark Hillier:

Hall Environmental Analysis Laboratory received 7 sample(s) on 12/7/2015 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued December 23, 2015.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

RE: NM1-9 Landfarm OrderNo.: 1601B39

Dear Mark Hillier:

Hall Environmental Analysis Laboratory received 4 sample(s) on 1/29/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss OrderNo.: 1606G14

Dear Mike Meyer:

Hall Environmental Analysis Laboratory received 16 sample(s) on 6/29/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman

RE: Sunco Landfarm OrderNo.: 1609955

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 9/17/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Sunco Landfarm OrderNo.: 1612914

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 12/15/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Sunco Landfarm OrderNo.: 1703795

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 3/15/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Sunco Landfarm OrderNo.: 1706635

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 6/13/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman

RE: Agua Moss Landfarm OrderNo.: 1709150

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 9/2/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss Sunco Landfarm OrderNo.: 1712526

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 12/8/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss Landfarm OrderNo.: 1803331

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 3/7/2018 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued March 13, 2018.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman
Laboratory Manager

RE: Agua Moss Landfarm OrderNo.: 1806630

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 6/12/2018 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

RE: Agua Moss Landfarm OrderNo.: 1808B01

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 8/16/2018 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss Sunco Landfarm OrderNo.: 1901489

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 1/11/2019 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued January 25, 2019.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

Qualifiers:

RL - Analyte reporting limit.

ND - Not detected at the reporting limit.

A - The analyte level was greater than four times the spike level. In accordance with the method % recovery is not calculated.

S - Spike recovery outside of advisory limits.

RE: Sunco Landfarm OrderNo.: 1904541

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 4/10/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Agua Moss Sunco Landfarm OrderNo.: 1906323

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 6/6/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

RE: Agua Moss Sunco Landfarm OrderNo.: 1909D13

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 3 sample(s) on 9/24/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

This report is a revised report and it replaces the original report issued January 15, 2020.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

RE: Agua Moss Sunco Landfarm OrderNo.: 2003461

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 6 sample(s) on 3/7/2020 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued March 27, 2020.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman
Laboratory Manager

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

RE: Agua Moss Sunco Landfarm OrderNo.: 1907197

Dear Heather Woods:

Hall Environmental Analysis Laboratory received 12 sample(s) on 7/3/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

QUALIFIERS

Project: 1907197
Pace Project No.: 30312550

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: For Safe Drinking Water Act (SDWA) analyses, the reported Unc. Is the calculated Count Uncertainty (95% confidence interval) using a coverage factor of 1.96. For all other matrices (non-SDWA), the reported Unc. is the calculated Expanded Uncertainty (aka Combined Standard Uncertainty, CSU), reported at the 95% confidence interval using a coverage factor of 1.96.

Gamma Spec: The Unc. reported for all gamma-spectroscopy analyses (EPA 901.1), is the calculated Expanded Uncertainty (CSU) at the 95.4% confidence interval, using a coverage factor of 2.0.

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

Ra	The reported Ra-226 results were determined by hermetically sealing the dried, processed sample in an appropriate-sized can. Each sample was stored for a minimum of 21 days to ensure that equilibrium between Ra-226 and daughters Bi-214 and Pb-214 was achieved. Reported Ra-226 results were inferred from gamma peaks attributable to Bi-214 and Pb-214.

(2) Standards for Toxic Pollutants. A toxic pollutant shall not be present at a concentration shown by credible scientific data and other evidence appropriate under the Water Quality Act, currently available to the public, to have potential for causing one or more of the following effects upon exposure, ingestion, or assimilation either directly from the environment or indirectly by ingestion through food chains: (1) unreasonably threatens to injure human health, or the health of animals or plants which are commonly hatched, bred, cultivated or protected for use by man for food or economic benefit; as used in this definition injuries to health include death, histopathologic change, clinical symptoms of disease, behavioral abnormalities, genetic mutation, physiological malfunctions or physical deformations in such organisms or their offspring; or (2) creates a lifetime risk of more than one cancer per 100,000 exposed persons.

(3) Standards for Non-Aqueous Phase Liquids. Non-aqueous phase liquid shall not be present floating atop of or immersed within ground water, as can be reasonably measured.

B. Other Standards for Domestic Water Supply

(1)	Chloride (Cl) (CAS 16887-00-6)	250.0 mg/l
(2)	Copper (Cu) (CAS 7440-50-8)	1.0 mg/l
