Follow Up Flag: Follow up

Here is the update for this leak. We exposed the pipe and found the leak that was caused by internal corrosion. The leak was in the 7 O'clock position. The inside of the pipe was clean, no liquid and looked good except for where the leak was. The coating on the pipe was in good shape except for the area where the leak was. A 5' piece of pipe was installed where the leak was. The hole was backfilled and about 8 yards of contaminated soil was hauled to the land farm. When we started excavation on the leak there was 2 GPS coordinates given by Kairos to us we excavated in both of those locations and at 3 more spots before finding the leak about 200' east of the 1st GPS location. We pressured up the line about 2:00 p.m. and did another pressure test and found that we still had a leak some where on the line. Line was pressured back up Monday and with a leak sniffer they found the second leak about 30' to the east of our leak repair. We have plans on repairing the 2nd leak sometime later this week. Roy and Gina were both off, I will leave the pipe with the leak up at Kutz. Dave there was 80# pressure on the line and the line was blown down 24 Hrs. after the Kairos Survey. See attached picture for leak size. Dave, Monica needs gas loss by Friday. Thank you.

Monica,

Its because the incident that you are trying to report on was submitted under the Notice of Release i.e. a release associated with 19.15.29 NMAC not 19.15.27/28.

I have canceled incident# NAPP2223164253 you should now be able to create a new C-129 and complete the form as needed. In the future if you need to repot a Major Venting or Flaring you need to complete the correct application which is the Notice of Major Venting/Flaring(NOMVF) or the C-129.

I believe the error is occurring the in the Natural Gas Vented Cause category. Can you correct that field to Venting? So that I can complete the report?

Thank you, Monica
