Cimarex Energy (Cimarex) retained Vertex Resource Services Inc. (Vertex) to conduct a Spill Assessment for two historical releases of produced water at Red Hills SWD #001, API 30-025-35598, Incident NTO1501548835 and NJXK1624425919 (hereafter referred to as "Red Hills"). Cimarex Energy provided notification to New Mexico Oil Conservation District (NMOCD) District 1 and the private Bureau of Land Management (BLM) via submission of an initial C-141 Release Notifications (Attachment 1). This letter provides a description of the Spill Assessment and includes a request for Spill Closure. The spill area is located at N 32.09614, W -103.58357.

Background

The site is located approximately 23 miles West of Jal, New Mexico. The legal location for the site is Section 28, Township 25 South and Range 33 East in Lea County, New Mexico. The spill area is located on BLM property. An aerial photograph and site schematic were included in NMOCD approved Remediation Plan.

The Geological Map of New Mexico (New Mexico Bureau of Geology and Mineral Resources, 2020) indicates the site's surface geology is comprised primarily of Qep-eolian and piedmont deposits that include eolian sands interlaid with piedmont-slope deposits (New Mexico Bureau of Geology and Mineral Resources, 2022). The Natural Resources Conservation Service *Web Soil Survey* characterizes the soil at the site as Pyote loamy fine sands, characterized by deep, fine sandy and loamy fine sandy soil. It tends to be well-drained with negligible runoff and low available moisture levels in the soil profile (United States Department of Agriculture, Natural Resources Conservation Service, 2022).

There is no surface water located at Red Hills. The nearest significant watercourse, as defined in Subsection P of 19.15.17.7 New Mexico Administrative Code (NMAC), is the Pecos River located approximately 24 miles west of the site. An emergent wetland is located approximately 1.2 miles southwest (United States Fish and Wildlife Service, 2022). At Red Hills, there are no continuously flowing watercourses, lakebeds, sinkholes, playa lakes, or other critical water or community features nearby as outlined in Paragraph (4) of Subsection C of 19.15.29.12 NMAC.

2022 Spill Assessment and Closure
August 2022

Incident Description

The first release occurred on January 8, 2015, due to a swedge failing on the discharge side of the tri-plex pump. The spill was reported on January 9, 2015, and involved the release of approximately 140 barrels (bbl.) of produced water into the earthen bermed containment. Approximately 120 bbl. of free fluid was removed during initial spill clean-up. A second release occurred on top of the original spill and involved the release of approximately 330 bbl. and approximately 270 bbl. of free fluid was recovered at the initial clean-up. The NMOCD C-141 Report: NTO1501548835 is included in Attachment 1. The daily field report (DFR) and site photographs from the initial characterization were included in the NMOCD approved Remediation Plan.

The third release occurred on August 25, 2016, due to a threaded nipple breaking off a tee. The spill was reported on August 26, 2016 and involved the release of approximately 55 barrels (bbl.) of produced water into the earthen bermed containment. Approximately 15 bbl. of free fluid was removed during initial spill clean-up. The NMOCD C-141 Report: NJXK1624425919 is included in Attachment 1. The DFRs and site photographs from the initial characterization were included in the NMOCD approved Remediation Plan.

Closure Criteria Determination

Cimarex retained Vertex to collect lithological data for a test soil borehole for depth to groundwater determination with Scarborough Drilling, Inc. where a borehole was drilled on a neighboring Cimarex location to a depth of 55 feet. The borehole was left open for over 72 hours to allow for potential slow infill of groundwater. After the 72-hour waiting period without observing groundwater, it was confirmed that groundwater beneath the site is greater than 55 feet. The borehole was properly abandoned with drill cuttings and bentonite chips. Documentation used in Closure Criteria Determination research was included in the Characterization and Remediation Plan submitted and approved by NMOCD.

presented in Table 1.

Remedial Actions Taken

An initial site inspection of the spill area was completed on December 22, 2021, which identified the release specified in the initial C-141 Report. The approximate extent of the spill was then estimated and the area subsequently white lined for the required 811 One Call request. The impacted area was determined to be approximately 157 feet long and 63 feet wide; the total affected area was determined to be 10,799 square feet. Vertex completed delineation around the tank battery containment and pad area, field screens and laboratory results were included within the remediation workplan submission for approval by NMOCD.

A Remediation Plan was completed and submitted to NMOCD for approval to complete excavation. Remediation was completed to meet reclamation standards. Notification of the approved remediation plan can be found in Attachment 2.

Remediation efforts began on July 18, 2022 and were completed on July 21, 2022. Vertex personnel supervised the excavation of impacted soils. Field screening was completed on multiple sample points and consisted of analysis using a Dexsil Petroflag using EPA SW-846 Method 9074 (extractable hydrocarbons) and electrical conductivity meter (chlorides). Field screening results were used to identify areas requiring further remediation from those areas showing concentrations below determined closure criteria levels. Contaminated soils were removed to a depth of 4 feet below ground surface (bgs). A site schematic of confirmation sampling points can be found in Figure 2 Attachment 3. Laboratory results are presented in Table 2, Attachment 4. Impacted soil was transported by a licensed waste hauler and disposed of at an approved waste management facility. The DFRs associated with the remediation site inspections are included in Attachment 5.

NMOCD requested further vertical delineation be completed for sample point BH22-05. Vertex personnel guided equipment to obtain samples to meet strictest criteria. Two samples were collected to show the decrease in contamination at 8 feet bgs and 20 feet bgs. Both samples were submitted to Hall Environmental Analysis Laboratory under chain-of-custody (COC) protocols and analyzed for BTEX (EPA Method 8021B), TPH (GRO, DRO, MRO – EPA

Method 8015D) and total chlorides (EPA Method 300.0). Results for the additional delineation samples are presented in Table 2, Attachment 4 and the laboratory data report is included in Attachment 6.

Notification that confirmatory samples were being collected was provided to the NMOCD on July 15, 2022, and can be found in Attachment 2. Confirmatory composite samples were collected from the base and walls of the excavation in 200 square foot increments. A total of 64 samples were collected for laboratory analysis following NMOCD soil sampling procedures. Samples were submitted to Hall Environmental Analysis Laboratory under COC protocols and analyzed for BTEX (EPA Method 8021B), TPHs (GRO, DRO, MRO – EPA Method 8015D) and total chlorides (EPA Method 300.0). Laboratory results are presented in Table 2, Attachment 4 and the laboratory data reports are included in Attachment 6. All confirmatory samples collected and analyzed were below closure criteria for the site.

Closure Request

The spill area was fully delineated, remediated and backfilled with local soils. The confirmatory sample notification email is included in Attachment 2. Confirmatory samples were analyzed by the laboratory and found to be below allowable concentrations as per the NMAC Closure Criteria for Soils Impacted by a Release locations “51-100 feet to groundwater”. Based on these findings, Cimarex Energy requests that this spill be closed.

Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- ☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- ☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- ☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- ☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- ☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- ☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- ☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- ☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Dear Monica Peppin:

Hall Environmental Analysis Laboratory received 54 sample(s) on 7/23/2022 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: Red Hills SWD 1

OrderNo.: 2207B21

Dear Michael Moffitt:

Hall Environmental Analysis Laboratory received 12 sample(s) on 7/22/2022 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901
