Steps taken to limit the duration and magnitude of vent or flare	Tap Rock saw the compressor go down. Due to this the facility was shut in, but not before Tap Rock flared over the regulated volumes. The malfunction of the equipment is still under investigation. Tap Rock also saw flare volumes due to flash gas coming off of the tanks and an excess amount of oxygen at the tank level. The amount of oxygen does not meet pipeline quality specifications for our midstream provider. Tap Rock is analyzing this location and the equipment on location to verify the facility can capture all excess gas. If flaring continues Tap Rock will alter the facility by placing additional gas takeaway equipment.
