Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	Gas was flared when a hydrate was discovered in the Vada discharge line. The Vada discharge line is pigged twice a day to prevent hydrate formation. The facility operates a glycol unit to remove moisture from the gas prior to the gas leaving the facility to also prevent hydrate formation. All conditions were normal prior to the shutdown. This event was unavoidable.
Steps taken to limit the duration and magnitude of vent or flare	Gas was flared until the hydrate was safely removed and the discharge line was returned to service.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Operations safely removed the hydrate. The discharge line was returned to normal service, normal operations resumed, and flaring ceased.
