Enter data in shaded fields to calculate gas volumes released due to leak and blowdown of system.

Hours of leak =	1.5	Example:
Diameter of hole (inches) =	0.125	Leak for 4 (est) hours out of a 1/4 inch hole with line pressure of 750 psig
Upstream Pressure =	32	
Volume of gas (mcf/hr) loss is equal to the hole diameter squared times the upstream pressure absolute. *		

Volume of Gas Leaked = 1.09 Mcf

Footage of Pipe blowdown =	13200	
Initial line pressure =	8	Calculated factor for line pack = 8.625
Diameter of Pipe (inches) =	32	

Example:
Volume of Gas BlownDown = 113.84 Mcf
Loss of gas due to blowdown of 7 miles of 12 inch at initial pressure 51 psig

Total Volume of Gas Loss =	114.94 Mcf	Reportable	50 Mcf
		Immediate Notification	500 Mcf

Determination of Reporting Requirements

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.

Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.

An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.

Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes

Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	Gas was vented to atmosphere when a leak was discovered on Targa's 8" valve setting. This leak was due to corrosion on the pipeline. The pipeline is underground, and the corrosion was not visible. The first sign of corrosion on an underground pipeline is a leak. Furthermore, the only way to make repairs is to depressurize the corroded section of pipeline to atmosphere. This event was beyond Targa's control.
Steps taken to limit the duration and magnitude of vent or flare	The corroded section of pipeline was isolated and depressurized to atmosphere. Once the section of pipeline was fully depressurized, the emission event ended.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	The corroded section of pipeline will be replaced. Once the new section of pipeline is verified safe to operate, the pipeline will return to normal service.
