SUBJECT: SOIL REMEDIATION CLOSURE REPORT FOR INCIDENT 2RP-3997 and 2RP-4204
POKER LAKE DISCHARGE LINE, EDDY COUNTY, NEW MEXICO

Dear Mr. Bratcher:

On behalf of Enterprise Field Services, LLC, Souder, Miller & Associates (SMA) has prepared this CLOSURE REPORT that describes the assessment, initial delineation and remediation for a release associated with the Poker Lake Discharge Line. The site is located in UNIT LETTER I, SECTION 19, TOWNSHIP 24S, RANGE 30E, NMPM, Eddy County, New Mexico, on federal land. Figure 1 illustrates the vicinity and location of the site.

Table 1, below, summarizes information regarding the release.

Table 1: Release information and Site Ranking	
Name	Poker Lake Discharge Line
Company	Enterprise Field Services, LLC
Incident Numbers	2RP-3997, 2RP-4204
Facility Numbers	fAB1632138322, fAB1713229995
Location	32.201, -103.914
Estimated Date of Release	11/6/2016, 4/27/2017
Date Reported to NMOCD	11/14/2016, 5/9/2017
Land Owner	Federal
Reported To	NM Oil Conservation Division (NMOCD)
Source of Release	Buried Pipeline
Released Material	Natural Gas and Pipeline Liquids
Released Volume	465 MSCF and 14 bbls Pipeline Liquids
Recovered Volume	3 bbls Pipeline liquid
Net Release	465 MSCF and 11 bbls Pipeline Liquids
Nearest Waterway	Pecos River is approximately 3 miles West
Depth to Groundwater	Estimated to be greater than 100'
Nearest Domestic Water Source	Less than 1,000 feet
NMOCD Ranking	10
SMA Response Dates	Multiple

Poker Lake 12" Discharge Line
November 29, 2017

Page 2 of 5

1.0 Background

On November 6, 2016, the Enterprise discharge line failed causing the release of 4 bbls of produced water and 230 MSCF of gas. On April 27, 2017, on the same line approximately 400 feet North of the initial release, 10 bbls of produced water and 235 MSCF were released due to failure. The combined release area was approximately 400 feet long by less than 5 feet wide. Both releases, and their flow paths, are shown in Figure 2a. The initial C-141 forms are included in Appendix A.

2.0 Site Ranking and Land Jurisdiction

The release site is located approximately 9.29 miles southeast of the Town of Malaga, New Mexico at an elevation of approximately 3,204 feet above sea level. The first release point occurred within an unnamed arroyo, that is not a tributary of the Pecos River. After evaluation of the site using aerial photography and topographic maps, and searching the New Mexico Office of the State Engineer's water well database, depth to groundwater is estimated to be greater than 100 feet below ground surface (bgs). Figure 1 depicts the site vicinity and Figures 2a-2c depict the site location.

SMA searched the New Mexico State Engineer's Office (NMOSE) online database for water wells in the vicinity of the release. One domestic water well is located within 1,000 feet but greater than 200 feet from the release site. The primary use of the water well is to provide stock water for stock of less than five households. The physical location of this release is on BLM property and under the jurisdiction of the New Mexico Oil Conservation Division (NMOCD).

Recommended Remediation Action Levels (RRALs) are determined by the site ranking according to the NMOCD *Guidelines for Remediation of Leaks, Spills, and Releases* (1993). Below in Table 2 are the remediation standards and the site ranking for this location. Justification for this site ranking is found in Figure 1 and Appendix B.

Table 2.

Soil Remediation Standards	0 to 9	10 to 19	>19
Benzene	10 PPM	10 PPM	10 PPM
BTEX	50 PPM	50 PPM	50 PPM
TPH	5000 PPM	1000 PPM	100 PPM

Depth to Groundwater	NMOCD Numeric Rank
< 50 BGS = 20	
50' to 99' = 10	
>100' = 0	0
Distance to Nearest Surface Water	NMOCD Numeric Rank
< 200' = 20	
200' - 1000' = 10	
>1000' = 0	0
Well Head Protection	NMOCD Numeric Rank
<1000' (or <200' domestic) = 20	
> 1000' = 0	10
Total Site Ranking	10

3.0 Release Characterization

A. First Release (2RP-3997)

On November 6, 2016, at the request of Enterprise, SMA responded to the release, and worked with the initial emergency action Enterprise Field Services crew, collecting assessment samples and stabilizing the release. Figure 2b depicts the path of the release, all pipelines located in the vicinity of the release, and soil and water sample collection points as described below. The pipeline liquid release flowed down the right of way (ROW) into a small arroyo that crosses multiple buried pipeline ROWs and under four surface production flowlines. The arroyo or unnamed surface drainage terminates into an earthen cattle stock tank approximately 500ft from the release point.

The first action taken was to excavate the area of the release, to repair the damaged pipeline. While that was occurring, SMA collected background and downstream samples, to determine whether the release had traveled down the arroyo. Samples BG1 and BG2 were collected at surface grade and are background samples collected from the unaffected ROW. The initial samples collected, soil samples L1, L2 and SW1 are from the pipeline ROW in the area of potential impact associated with the release beyond the immediate location of the pipeline. Sample SW1 was collected from approximately 2 feet below ground surface (bgs) in the initial excavation made to repair the 12" pipeline. Aliquots of Samples L1 and L2 were field screened with a calibrated Photo Ionization Detector (PID), with the remainder of the samples sent under standard chain of custody protocol to Hall Environmental Analysis Laboratory. Table 3a, First Release Summary of Laboratory Results provides the results of the summary of the laboratory analytical results for all samples.

As part of the initial actions, an intercept berm was placed across the drainage to prevent any flow into the earthen stock tank. A collection sump was constructed up gradient of the intercept berm to collect any flowing liquids. At 6:45pm, SMA field personnel placed a call to Shelly Tucker at the BLM and notified her that vacuum trucks could not drive into the arroyo to recover the lost fluids to prevent pipeline liquids from flowing further down the drainage. With a gathering thunderstorm to the east of the location, SMA requested that a vacuum truck with fresh water be mobilized to the site. At that time, SMA and Enterprise Field Service field personnel used approximately 75BBL of fresh water (Field EC of 0.02mS) to flush the released pipeline liquids down the arroyo into the sump excavated downgradient. The pipeline liquids and water were recovered from the sump and sent to an SWD for proper disposal. The release point was excavated and a clamp placed over the affected pipe. All affected soils were placed on plastic and a berm was placed at sample point L2 to prevent any further migration of remaining pipeline liquids down the ROW.

On November 16, 2016, after the rain events of the prior week, SMA field personnel returned to the location to resample around the pipeline at the source of the release, down the pipeline ROW, the arroyo, and in the cattle stock tank. Assessment samples at the location were taken by courier under a chain of custody to Hall Environmental Analysis Laboratories on November 21, 2016. As recorded in Table 3a, assessment samples were collected at approximately 0.5 feet bgs, with samples from the arroyo and pipeline ROW. Aqueous sample W1 was collected from the sump, W2 was collected from the flow path during flush, and W3 from the cattle stock tank.

After these initial responses, and laboratory results were received, SMA and Enterprise determined that the arroyo between the excavation and flush point had been impacted as far as sample L3 (approximately XX  from release). This is a very rocky area, which crosses two buried pipelines. Laboratory analysis also indicated that soils downstream from the flush point (where the fresh water was put in to flush down the draw) meet regulatory standards. Field soil samples collected, both pre-flush and post-flush showed

Poker Lake 12" Discharge Line
November 29, 2017

Page 4 of 5

a reduction in chlorides by a factor of 10 (see Table 3a).

The water samples collected from the accumulated water in the sump and cattle stock tank yielded results below NMOCD closure standards for benzene, combined benzene, toluene, ethyl-benzene, and total xylenes (BTEX), and TPH, noted in table 3a.

It was determined that further excavation was necessary in the area of the release. The excavation work was scheduled for Spring of 2017, and is discussed in Section 4.0, Soil Remediation Summary, below.

B. Second Release (2RP-4204)

On April 27, 2017, a second release occurred as a rupture along the same pipeline approximately 400 feet North of the first release. This release pooled in the unnamed arroyo and flowed west along it, stopping short of the sump from the first release. This area is characterized by deep, moist, sandy soils typically found in bottom lands and drainage features. The release followed along the Enterprise pipeline for approximately 100 feet, then flowed west down the draw (see Figure 2c) where it crossed five more buried pipelines. The deepest pooling areas along the flow path were found at sample points L7 and L8.

On May 10th, 2017 SMA field personnel was onsite to assess the second release after the pipeline had been repaired. Samples L5 through L9 were collected and analyzed per NMOCD standards. Table 3b, Second Release Summary of Laboratory Results, provides the results of the field screening as well as the summary of the laboratory analytical results for all samples. Hall Environmental Analysis Laboratories Analytical Reports are included in Appendix A.

Since the impacted area had pooled in the arroyo, flushing was not an option. Therefore, it was determined that further excavation was necessary in the area of the release, and following the flow path, as possible. The excavation work was conducted in May, 2017, and is discussed in Section 4.0, Soil Remediation Summary, below.

4.0 Soil Remediation Summary

A. First Release

Clean confirmation samples from the sidewalls and bottom of the excavation around the ruptured pipeline have been collected. Three samples exceed regulatory standards, L1, L2 and L3, which is a very rocky area that crosses two buried pipelines, and cannot be safely excavated. However, with the exception of sample L1, all meet RRAL's. In addition, water samples from the stock tank indicate that it was not impacted at any time during the release or remedial activities.

B. Second Release

After 811 clearance, the guided excavation began on May 15, 2017. The pipeline was excavated to ten feet bgs, while the rest of the impacted soils were excavated to a maximum of five feet bgs. The release path crossed five more buried pipelines, impeding the excavation in a number of locations. Within the arroyo, all impacted soils met RRAL's except for sample point L8, which was directly over a high-pressure water line. This area was delineated and found to clean up at six feet bgs, but was only excavated two feet bgs, due to safety concerns. Soils were also left in place on four feet to either side of the pipeline as per the pipeline owners' request.

Poker Lake 12" Discharge Line
November 29, 2017

Page 5 of 5

This excavation is characterized by sample points L5 through L9, with L5 being at the release point and represents the bottom hole of the excavation. Sidewalls were extended until RRALs were met at SW5 through SW9. See figure 2c and table 3b for details.

5.0 Scope and Limitations

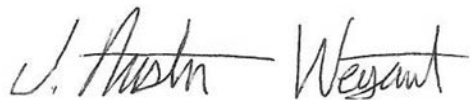

The scope of our services consisted of the performance of assessment sampling, verification of release stabilization, regulatory liaison, and preparation of this work plan. All work has been performed in accordance with generally accepted professional environmental consulting practices for oil and gas releases in the Permian Basin in New Mexico.

If there are any questions regarding this report, please contact either Austin Weyant at 575-689-8801 or Shawna Chubbuck at 505-325-7535.

Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

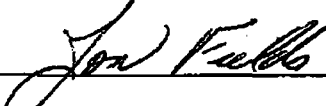

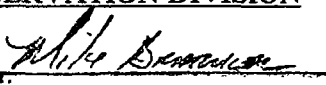

Describe Cause of Problem and Remedial Action Taken.*

Natural gas and pipeline liquids were released due to a pipeline leak. Pipeline segment was isolated, blown down, and will be repaired following standard one-call. Approximately 4 bbls of liquid was released and 3 bbls were recovered during initial remediation activities.

Describe Area Affected and Cleanup Action Taken.*

A liquid spill of approximately 4bbls of pipeline liquids occurred as part of the leak and 3 bbls were recovered. Remediation actions will follow the Enterprise Products, General Release Notification, Response and Remediation Plan (March 9, 2015).

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

New forms can be found in the
New Mexico State Website in forms:
[http://www.emnrd.state.nm.us/
OCD/forms.html](http://www.emnrd.state.nm.us/OCD/forms.html)

2RP-4204

Operator/Responsible Party,

The OCD has received the form C-141 you provided on 5/9/17 regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number 2RP-1204 has been assigned. **Please refer to this case number in all future correspondence.**

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC. [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. **As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District 2 office in ARTESIA on or before 6/9/17. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.**

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

- Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.

- Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.

- Nominal detection limits for field and laboratory analyses must be provided.

- Composite sampling is not generally allowed.

- Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

- Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.

- If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.

- Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.

RE: Poker Lake

OrderNo.: 1705A29

Dear Austin Weyant:

Hall Environmental Analysis Laboratory received 6 sample(s) on 5/18/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written over a horizontal line.

RE: Poker Lake

OrderNo.: 1705C15

Dear Austin Weyant:

Hall Environmental Analysis Laboratory received 8 sample(s) on 5/23/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written over a horizontal line.

Andy Freeman
Laboratory Manager

RE: Poker Lake 12"

OrderNo.: 1705852

Dear Austin Weyant:

Hall Environmental Analysis Laboratory received 8 sample(s) on 5/16/2017 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written over a horizontal line.

RE: Poker Lake

OrderNo.: 1611B03

Dear Austin Weyant:

Hall Environmental Analysis Laboratory received 7 sample(s) on 11/19/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written over a horizontal line.

RE: Poker Lake

OrderNo.: 1708674

Dear Austin Weyant:

Hall Environmental Analysis Laboratory received 5 sample(s) on 8/9/2017 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued August 28, 2017.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', with a stylized flourish at the end.

Andy Freeman
Laboratory Manager
