Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?	69 (ft bgs)
Did this release impact groundwater or surface water?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☑ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☑ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☑ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☑ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☑ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☑ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☐ Yes ☑ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☑ No
Did the release impact areas **not** on an exploration, development, production, or storage site?	☐ Yes ☑ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: ***Each of the following items must be included in the report.***

- ☑ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- ☑ Field data
- ☑ Data table of soil contaminant concentration data
- ☑ Depth to water determination
- ☑ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- ☐ Boring or excavation logs
- ☑ Photographs including date and GIS information
- ☑ Topographic/Aerial maps
- ☑ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Remediation Plan

Remediation Plan Checklist: ***Each of the following items must be included in the plan.***

- ☑ Detailed description of proposed remediation technique
- ☑ Scaled sitemap with GPS coordinates showing delineation points
- ☑ Estimated volume of material to be remediated
- ☑ Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- ☑ Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

Deferral Requests Only: ***Each of the following items must be confirmed as part of any request for deferral of remediation.***

- ☐ Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- ☐ Extents of contamination must be fully delineated.
- ☐ Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

SUBJECT: Amendment to Work Plan for the Hayhurst Pad 10 Release (nAPP2211730678), Eddy County, New Mexico

Dear Mr. Anderson,

On behalf of Atkins Engineering Associates INC. (AEA) has prepared this amendment to the NMOCD denied Site Assessment and Remediation Work plan submitted September 20th, 2022. To gain NMOCD work approval of remediation of the release of liquids related to oil and gas production activities at the Hayhurst Pad 10. The site is in Unit O, Section 26, Township 25S, Range 27E, Eddy County, New Mexico.

Table 1 summarizes release information and Site Criteria.

Table 1: Release Information and Closure Criteria			
Name	Hayhurst Pad 10	Company	Chevron U.S.A., Inc
API Number		Location	32.094581, -104.154458;
Incident Number	nAPP2211730678		
Estimated Date of Release	4/12/22	Date Reported to NMOCD	4/12/22
Landowner	State	Reported To	NMOCD District 1
Source of Release	Tetra had a pressure spike during pump operations, and then discovered that a layflat head had separated, allowing a volume of produced water to spill until crews could shut down, clamp, and make repairs on the connection.		
Released Volume	566 bbls	Released Material	Produced Water
Recovered Volume	0 bbls	Net Release	566 bbls
NMOCD Closure Criteria	51-100 feet to groundwater High Karst		

1.0 Background

Release delineation activities were conducted by Envirotech from September 20 through 22, 2022, which included utilizing hand tools to advance soil borings in proximity of the release path to determine the horizontal and vertical extents of the release. Concurrently, hydro excavators were on-site daylighting subsurface pipelines belonging to Chevron.

NMOCD rejected the previously submitted Site Assessment and Remediation Work plan (see Appendix E) on December 23, 2022.

Because the denial was based on the remedial method and not the Site assessment performed AEA decided to amend the previously submitted work plan.

2.0 Site Information and EM Survey

Electromagnetic surveying was used to accurately define the parameters or horizontal boundaries of the shallow soil investigation and determine the validity of the previous site assessment. A Geonics Ltd. EM-38 ground conductivity meter that has been factory calibrated was used on site to collect data.

Figure 1 attached is a product of the fixed-frequency EM method used to map variations in ground conductivity to identify anomalously conductive soils and infer changes in the soil characteristics and composition. This method used portable instrumentation consisting of a transmitter coil and a receiver coil. primary magnetic field from the transmitter coil induces subsurface eddy currents, which in turn generate a secondary magnetic field that is intercepted by the receiver coil. The ratio of the primary and secondary magnetic fields is related to ground conductivity represented as ECa in mS/m.
The conductivity values are not specific values from discrete depths; they are weighted averages of conductivity between the surface and the depth of exploration of the EM field and are termed “apparent conductivities”. The apparent conductivity values obtained are in units of millisiemens per meter (mS/m). The apparent conductivity (ECa) of the soil has been related to the paste extract conductivity {ECe) by the relationship ECa=5ECa (McNeill, 1986a). Table 2 (from McNeill, 1986a) illustrates this general relationship. Measurements are expressed in millisiemens/meter (mS/m).

Table 1: ECe to ECa Conversion

Soil Conductivity vs Salinity (from McNeill, 1986a)			
Salinity (NRCS)	**ECe (mS/cm) (Lab)**	**ECa (mS/m) (EM-38)**	**Figure Color**
NRCS Soil Background (site)	0-2	0-40	White to green
Slight	0-4	40-80	Yellow
Moderate	4-8	80-100	red
High	8-12	160-240	Purple

The table above shows the general correlation between laboratory soil saturated paste ECe and the apparent conductivity ECa measured by an EM unit. The Electromagnetic surveying confirmed the previously submitted release area and samples.

3.0 Proposed Remediation

Comparing the delineation performed by Envirotech with the horizontal extent provided by the EM Survey conducted by AEA. AEA proposes an excavation of caliche and native soil to remediate the impacted soils. Most of the excavation will be less than two (2) feet except for sample areas TH-13 and TH-18.

Figure 1 shows the extent of the proposed excavation and existing sample locations. All laboratory results are summarized in Envirotec Table 1. Laboratory reports are included in Appendix . AEA was operating under the assumption that because the release is not on pad that all areas would be remediated to the strictest closure standards.

Figure 2 shows the large amount of intersecting underground and above ground utilities. AEA will facilitate a project 811 an will work directly with the area utility owners to remove as much contaminate mass as safety will allow.

All contaminated soil from the location will be hauled to a NMOCD approved facility (waste manifest will be available upon request).

4.0 Variance and Limitations

Atkins Engineering Associates INC. (AEA) request a sample variance request from 19.15.29.12.D.1.c. The post data collection activities outlined in EPA's Guidance for Data Quality Assessment (EPA, 2000) via (VSP) show that closure sample collection at the five hundred (500) to eight hundred (800) square foot interval will still achieve the same 98% confidence interval as the standard two hundred square foot sampling plan. For these reasons AEA requests a closure sample interval of 500-800 square feet.

The scope of our services included: assessment sampling; verifying release stabilization; regulatory liaison; remediation; and preparing this scope of work. All work has been performed in accordance with generally accepted professional environmental consulting practices for oil and gas releases in the Permian Basin in New Mexico.

If there are any questions regarding this report, please contact Austin Weyant at 575-626-3993

Was this a major release as defined by 19.15.29.7(A) NMAC? ☒ Yes ☐ No	If YES, for what reason(s) does the responsible party consider this a major release? Over 25 bbls
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)? On 4-12-22 at 5:45pm Amy Barnhill e-mailed Mike Bratcher.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☒ The source of the release has been stopped.

☒ The impacted area has been secured to protect human health and the environment.

☒ Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.

☒ All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Tetra Technologies - Chevron
Hayhurst Pad 10 Produced Water Release Remediation Plan
Incident # nAPP2211730678
Unit O, Section 26, T25S, R27E
Eddy County, New Mexico

Page Left Intentionally Blank

Location

The subject site is identified as the Hayhurst Pad 10 Produced Water Spill and is located within Unit I and O, Section 26, Township 25 South, Range 27 East, Eddy County, New Mexico. The site location is further described as beginning at 32.09802, -104.15239 and terminating at 32.0946719, -104.154604; see **Figure 1, Vicinity Map**.

Background

On April 12, 2022, a release of produced water occurred at Chevron's Hayhurst Pad 10 due to a pressure spike causing a layflat head to separate. Approximately 566 barrels of produced water were released, and visible surface impact included an approximately 2,700 feet in length and averaging 20 feet in width. Crews were able to quickly shut down operations, clamp the hose, and make repairs to the connection.

Surface and Ground Water

Based on information provided by the United States Department of Agriculture Natural Resources Conservation Service (NRCS) Web Soil Survey, the soils predominant at the site is the Reeves-Reagan loams which consists of residuum weathered from gypsum.

The subject site is 4,662 feet west of a livestock tank (Apple Tank), and 1,074 feet east of a water well (C-04371). The depth to water in the water well is recorded at 69 feet on October 16, 2019. Therefore, depth to water at the subject site is estimated to be greater than 51 feet below ground surface (bgs) and less than 100 feet bgs. Additionally, the release site is located in a high karst occurrence location; therefore, the most stringent release closure criteria is applicable for any subsequent remediation efforts. Siting criteria documentation for the subject well site is provided in **Appendix A, Siting Documentation.**

Regulatory Standards

Based on the release being mostly confined to the upper 4 feet and in a high karst potential location, the closure criteria for the site were based on the following standards (*19.15.29.12 and 19.15.29.13 NMAC*):

Constituent	Method	Limit
Chloride	EPA 300.0	600 mg/kg
Total Petroleum Hydrocarbons (TPH)	EPA Method 8015D	100 mg/kg
Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)	EPA Method 8021B	50 mg/kg
Benzene	EPA Method 8021B	10 mg/kg

Site Characterization-Delineation

Release delineation activities were conducted from August 8 through 11, 2022, which included utilizing hand tools and a trackhoe to advance test holes in proximity of the release path to determine the horizontal and vertical extents of the release.

Field Screening

To direct delineation activities, field screening for volatile organic compounds (VOCs) was conducted with a photo-ionization detector (PID) organic vapor meter (OVM). Prior to performing field screening activities, the PID-OVM was first calibrated with 100 parts per million (ppm) isobutylene gas. Soil samples were also screened in the field for TPH per United States Environmental Protection Agency (EPA) Method 418.1 using an Infracal Total Oil and Grease (TOG)/TPH Analyzer. A three-point calibration was completed prior to conducting soil screening. Field screening protocol followed the manufacture's operating procedures. Samples were also field screened for chlorides using a Hach Chloride Test Kit. Field screening results are provided in **Appendix B, Field Notes**.

Confirmation Soil Sampling

Three (3) surface soil samples were collected off-site, in undisturbed locations (BG-1, BG-2, and BG-3). The three (3) soil samples were used to provide background chloride concentrations for future remediation efforts. Additionally, six (6) surface, grab samples were collected along the central axis of the release path (GS-1 through GS-6). These samples were used to determine if VOCs and TPH could be used as indicators for the release delineation, or if chloride would be the contaminant of concern for this site. These initial samples were field screened as well as collected for laboratory analysis.

A total of twenty-three (23) test holes (TH) were excavated in proximity of the spill path. Two samples were collected for laboratory analysis from each test hole, except for TH-22 and TH-23. The sample depth was limited in these test holes due to safety restrictions from buried pipelines. All soil samples collected for laboratory analysis, were placed into an individual laboratory provided 2-ounce jar, capped head space free, and transported on ice to Envirotech Analytical Laboratory under strict chain of custody. The soil sample locations are illustrated in **Figure 2, Site Map** and in **Appendix C, Site Photography.**

Laboratory Analytical Results

The soil samples were analyzed per analytical methods referenced in *19.15.29.12 NMAC*. Laboratory results indicate VOCs and TPH are below laboratory detection limits and regulatory standards throughout the spill path, at all depths analyzed. Chloride is the contaminant of concern for the subject release and concentrations ranged from <20.0 mg/kg in several samples to 47,600 mg/kg in TH-8 0". Analytical results are summarized in **Table 1, *Summary of Soil Analytical Results*** and **Appendix D, Laboratory Analytical Report.**

The original spill path was mapped out by Tetra Tech representatives, and the flow path was used to guide horizontal delineation efforts. Field screening and laboratory samples, correspond to the horizontal spill path originally mapped by Tetra Tech. The spill map will also be used to guide the horizontal extents of the remediation excavation.

Based on field screening and confirmation samples collected, contaminants of concern are below regulatory limits at 4 feet bgs throughout the release footprint. However, chloride above 600 mg/kg was recorded at 2 feet bgs in TH 12, 14, 18, and 20; which correspond to areas where the released fluid had ponded along the right-of-way. A majority of the remediation efforts are anticipated to be in the upper 2 feet of the release path, with sections extending to 2 to 3 feet bgs.

Remediation Plan

The spill footprint is estimated at 108,000 square feet to an average depth of 2 feet; therefore, it is estimated approximately 8,000 cubic yards of soil has been impacted. To successfully mitigate chloride contamination, and to protect public health and the environment, Tetra Tech/Chevron proposes the following remediation plan:

Based on the delineation field screening and laboratory analytical results for chloride, the contaminated soil will be removed to approximately 1.5 feet bgs along the entire spill path. Field screening using a ~~Hach Chloride Test Kit~~ will guide the excavation extents. Where chloride contamination was confirmed above regulatory standard at 2 feet bgs, excavation will continue until field screening results indicate chloride contamination has been removed.

The excavation will be deemed complete when field screening levels indicates chloride contamination is below the applicable regulatory standard. All contaminated soil will be transported off site to a NMOCD approved disposal facility.

~~Alternative Method~~

~~To expedite the remediation project, mitigate heavy truck traffic, and provide a cost effective solution, an alternative to the traditional dig and haul is proposed. Treatment of the soil utilizing soil shredding and 3 Tier Technologies SA-2000 is the proposed alternative method. Soil shredding involves excavating impacted soil; mechanically grinding the soil; adding the appropriate soil amendment for the contaminates of concern in a liquid form; and allowing the treated soil to react. In the case of chloride impacted soils, the excavation and treatment process can be completed in approximately 10 to 20 days for the subject volume of soil. Further information regarding SA-2000 is provided in **Appendix E**.~~

Site Stabilization and Restoration

Upon completion of the remediation excavation, an NMOCD 48-hour notice will be submitted for confirmation sampling for contaminants of concern. Chevron is requesting a variance to the 200

square foot confirmation sampling requirement for the area to be excavated, which would require over 540 base samples within the excavation footprint. Chevron proposes increasing the confirmation sampling size to 5-point composite soil samples representative of 500 square feet for the base and sidewalls of the excavation. Five-point composite soil samples will be collected and analyzed for contaminants of concern provided in *Table 1* of *19.15.29.12 NMAC*. If laboratory analytical results indicate concentrations of TPH, benzene, total BTEX, and chloride are below Table 1 criteria, the site will be backfilled with non-impacted soil.

Site Closure

Upon completion of the remediation activities, Tetra Tech/Chevron will submit a Form C-141/Closure to the NMOCD, including the Closure Report Attachment Checklist. The site will be reclaimed in accordance with 19.15.29.13 NMAC.

Schedule

The proposed schedule for the remediation excavation is estimated to be 45-65 days. This schedule is dependent on the availability of transport and the distance of the disposal facility from the subject site. This does not include confirmation sampling, laboratory analysis, and closure report preparation.

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 8/22/2022 at 4:30 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Greg Crabtree,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 8/12/2022 3:01:00PM, under the Project Name: Hayhurst Pad 10.

The analytical test results summarized in this report with the Project Name: Hayhurst Pad 10 apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

QC Summary Report Comment:
Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Definitions and Notes

Tetra Technologies	Project Name:	Hayhurst Pad 10	
6121 Indian School Road, NE	Project Number:	21016-0002	**Reported:**
Albuquerque NM, 87110	Project Manager:	Greg Crabtree	08/19/22 14:19

M2	Matrix spike recovery was outside quality control limits. The associated LCS spike recovery was acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
RPD	Relative Percent Difference
DNI	Did Not Ignite

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Container Type: **g** - glass, **p** - poly/plastic, **ag** - amber glass, v - VOA

Note: Samples are discarded 30 days after results are reported unless other arrangements are made. Hazardous samples will be returned to client or disposed of at the client expense. The report for the analysis of the above samples is applicable only to those samples received by the laboratory with this COC. The liability of the laboratory is limited to the amount paid for on the report.

Sample Receipt Checklist (SRC)

Instructions: Please take note of any NO checkmarks.
If we receive no response concerning these items within 24 hours of the date of this notice, all the samples will be analyzed as requested.

Client:	Tetra Technologies	Date Received:	08/12/22 15:01	Work Order ID:	E208073
Phone:	(505)881-3188	Date Logged In:	08/12/22 15:42	Logged In By:	Caitlin Christian
Email:	gcrabtree@envirotech-inc.com	Due Date:	08/19/22 17:00 (5 day TAT)		

Chain of Custody (COC)

1. Does the sample ID match the COC?	Yes
2. Does the number of samples per sampling site location match the COC	Yes
3. Were samples dropped off by client or carrier?	Yes
4. Was the COC complete, i.e., signatures, dates/times, requested analyses?	Yes
5. Were all samples received within holding time? Note: Analysis, such as pH which should be conducted in the field, i.e, 15 minute hold time, are not included in this disucssion.	Yes

Carrier: Kholeton Sanchez

Sample Turn Around Time (TAT)

6. Did the COC indicate standard TAT, or Expedited TAT?	Yes

Sample Cooler

7. Was a sample cooler received?	Yes
8. If yes, was cooler received in good condition?	Yes
9. Was the sample(s) received intact, i.e., not broken?	Yes
10. Were custody/security seals present?	No
11. If yes, were custody/security seals intact?	NA
12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°±2°C Note: Thermal preservation is not required, if samples are received w/i 15 minutes of sampling	Yes
13. If no visible ice, record the temperature. Actual sample temperature: 4°C	

Sample Container

14. Are aqueous VOC samples present?	No
15. Are VOC samples collected in VOA Vials?	NA
16. Is the head space less than 6-8 mm (pea sized or less)?	NA
17. Was a trip blank (TB) included for VOC analyses?	NA
18. Are non-VOC samples collected in the correct containers?	Yes
19. Is the appropriate volume/weight or number of sample containers collected?	Yes

Field Label

20. Were field sample labels filled out with the minimum information:	
Sample ID?	Yes
Date/Time Collected?	Yes
Collectors name?	Yes

Sample Preservation

21. Does the COC or field labels indicate the samples were preserved?	No
22. Are sample(s) correctly preserved?	NA
24. Is lab filteration required and/or requested for dissolved metals?	No

Multiphase Sample Matrix

26. Does the sample have more than one phase, i.e., multiphase?	No
27. If yes, does the COC specify which phase(s) is to be analyzed?	NA

Subcontract Laboratory

28. Are samples required to get sent to a subcontract laboratory?	No	
29. Was a subcontract laboratory specified by the client and if so who?	NA	Subcontract Lab: na

Comments/Resolution

Project has been seperated into 3 reports due to amount of samples. Workorders are as follows:
E208073 COC pg 1&2 of 6, E208074 COC pg 3&4 of 6, E208075 COC pg 5&6 of 6.

Client Instruction

Signature of client authorizing changes to the COC or sample disposition.

Greg Crabtree,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 8/12/2022 3:01:00PM, under the Project Name: Hayhurst Pad 10.

The analytical test results summarized in this report with the Project Name: Hayhurst Pad 10 apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

QC Summary Report Comment:
Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Definitions and Notes

Tetra Technologies	Project Name:	Hayhurst Pad 10	
6121 Indian School Road, NE	Project Number:	21016-0002	**Reported:**
Albuquerque NM, 87110	Project Manager:	Greg Crabtree	08/19/22 09:07

M2	Matrix spike recovery was outside quality control limits. The associated LCS spike recovery was acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
RPD	Relative Percent Difference
DNI	Did Not Ignite

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Sample Receipt Checklist (SRC)

Instructions: Please take note of any NO checkmarks.
If we receive no response concerning these items within 24 hours of the date of this notice, all the samples will be analyzed as requested.

Client:	Tetra Technologies	Date Received:	08/12/22 15:01	Work Order ID:	E208074
Phone:	(505)881-3188	Date Logged In:	08/12/22 15:44	Logged In By:	Caitlin Christian
Email:	gcrabtree@envirotech-inc.com	Due Date:	08/19/22 17:00 (5 day TAT)		

Chain of Custody (COC)

1. Does the sample ID match the COC?	Yes
2. Does the number of samples per sampling site location match the COC	Yes
3. Were samples dropped off by client or carrier?	Yes
4. Was the COC complete, i.e., signatures, dates/times, requested analyses?	Yes
5. Were all samples received within holding time? Note: Analysis, such as pH which should be conducted in the field, i.e, 15 minute hold time, are not included in this disucssion.	Yes

Carrier: Kholeton Sanchez

Sample Turn Around Time (TAT)

6. Did the COC indicate standard TAT, or Expedited TAT?	Yes

Sample Cooler

7. Was a sample cooler received?	Yes
8. If yes, was cooler received in good condition?	Yes
9. Was the sample(s) received intact, i.e., not broken?	Yes
10. Were custody/security seals present?	No
11. If yes, were custody/security seals intact?	NA
12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°±2°C Note: Thermal preservation is not required, if samples are received w/i 15 minutes of sampling	Yes
13. If no visible ice, record the temperature. Actual sample temperature: 4°C	

Sample Container

14. Are aqueous VOC samples present?	No
15. Are VOC samples collected in VOA Vials?	NA
16. Is the head space less than 6-8 mm (pea sized or less)?	NA
17. Was a trip blank (TB) included for VOC analyses?	NA
18. Are non-VOC samples collected in the correct containers?	Yes
19. Is the appropriate volume/weight or number of sample containers collected?	Yes

Field Label

20. Were field sample labels filled out with the minimum information:	
Sample ID?	Yes
Date/Time Collected?	Yes
Collectors name?	Yes

Sample Preservation

21. Does the COC or field labels indicate the samples were preserved?	No
22. Are sample(s) correctly preserved?	NA
24. Is lab filteration required and/or requested for dissolved metals?	No

Multiphase Sample Matrix

26. Does the sample have more than one phase, i.e., multiphase?	No
27. If yes, does the COC specify which phase(s) is to be analyzed?	NA

Subcontract Laboratory

28. Are samples required to get sent to a subcontract laboratory?	No	
29. Was a subcontract laboratory specified by the client and if so who?	NA	Subcontract Lab: na

Comments/Resolution

Project has been seperated into 3 reports due to amount of samples. Workorders are as follows:
E208073 COC pg 1&2 of 6, E208074 COC pg 3&4 of 6, E208075 COC pg 5&6 of 6.

Client Instruction

Signature of client authorizing changes to the COC or sample disposition.

Greg Crabtree,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 8/12/2022 3:01:00PM, under the Project Name: Hayhurst Pad 10.

The analytical test results summarized in this report with the Project Name: Hayhurst Pad 10 apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

QC Summary Report Comment:
Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Definitions and Notes

Tetra Technologies	Project Name:	Hayhurst Pad 10	
6121 Indian School Road, NE	Project Number:	21016-0002	**Reported:**
Albuquerque NM, 87110	Project Manager:	Greg Crabtree	08/19/22 14:16

M2	Matrix spike recovery was outside quality control limits. The associated LCS spike recovery was acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
RPD	Relative Percent Difference
DNI	Did Not Ignite

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Remediation Plan

Remediation Plan Checklist: ***Each of the following items must be included in the plan.***

- ☑ Detailed description of proposed remediation technique
- ☑ Scaled sitemap with GPS coordinates showing delineation points
- ☑ Estimated volume of material to be remediated
- ☑ Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- ☑ Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

Deferral Requests Only: ***Each of the following items must be confirmed as part of any request for deferral of remediation.***

- ☐ Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- ☐ Extents of contamination must be fully delineated.
- ☐ Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

	Action Number: 212994
	Action Type: [C-141] Release Corrective Action (C-141)

CONDITIONS

Created By	Condition	Condition Date
rhamlet	The Remediation Plan is Conditionally Approved: The release will need to be remediated to the strictest closure criteria standards due to release being in a high karst area. Due to the sensitive nature of the site, the alternative sampling plan is denied. Please collect confirmation samples, representing no more than 200 ft2. All off pad areas must meet reclamation standards set forth in the OCD Spill Rule. The work will need to occur in 90 days after the work plan has been reviewed.	6/9/2023
