UPSET FLARE EVENT SPECIFIC JUSTIFICATIONS FORM

Facility: Corral 2S CS**Flare Date:** 06/01/2023**Duration of event:** 20 Minutes**MCF Flared:** 64**Start Time:** 12:00 AM**End Time:** 12:20 AM**Cause:** Emergency Flare > Severe Weather > Lighting > Third Party Power Provider > Substation Power Outage > Facility Power Outage > Emergency Shut Down**Method of Flared Gas Measurement:** Gas Flare Meter

1. Reason why this event was beyond Operator's control:

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, this was a sudden and unexpected emergency shutdown of the facility due to a third-party provider power outage caused by severe weather and lightning resulting from a severe storm in the area, which triggered flaring to occur. Xcel's power substation lost power as a result of the severe weather affecting the area. This event could not have been avoided or prevented from happening as Oxy takes every preventative measure necessary to weather-protect its equipment and facility as much as possible, but power outages are out of Oxy's control. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible during a power outage.

2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, this was a sudden and unexpected emergency shutdown of the facility, due to a third-party provider power outage caused by severe weather and lightning resulting from a storm in the area, which triggered flaring to occur. This event could not have been avoided or prevented from happening as Oxy takes every preventative measure necessary to weather-protect its equipment and facility as much as possible, but power outages are out of Oxy's control. Oxy production techs, who were in the area, quickly noticed flaring occurring and immediately began communication with additional field personnel to manually shut-in more than twenty + high producing wells to cease flaring. Due to the severe weather and lightning, this took some time as Oxy personnel must proceed cautiously. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible during a power outage. The facility was running and operating normally without issues prior to the power outage occurring, which in turn prompted flaring to occur. All Oxy field personnel during this event worked diligently to ensure the facility was returned to normal operations once power restored, including having a compressor mechanic dispatched to assist with restarting compression equipment. Oxy field personnel were able to restart all facility equipment without further issues. As a precaution, Oxy

production techs remained on-site until they were assured that no further issues would occur with the facility's operational equipment because of the area's severe weather and power outage.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy is limited in the corrective actions to eliminate this type of cause and potential reoccurrence of flaring from sudden and unexpected weather-related power outages as even with the best planning, unforeseen problems can arise during severe weather events, which can and will be beyond Oxy's ability to control. Oxy has a strong and positive equipment preventative maintenance program in place. The only actions that Oxy can take and handle that is within its control, is to keep continue with its weather-related preventive measures for this facility, accordingly.

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 229569
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Prerequisites	
Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.	
Incident Well	Unavailable.
Incident Facility	[fAPP2126640958] CORRAL #2 SOUTH COMP STATION

Determination of Reporting Requirements	
Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Severe Weather > Lighting > Third Party Power Provider > Substation Power Outage > Facility Power Outage > Emergency Shut Down

Representative Compositional Analysis of Vented or Flared Natural Gas	
Please provide the mole percent for the percentage questions in this group.	
Methane (CH4) percentage	77
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

Action 229569

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:
	16696
	Action Number: 229569
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	06/01/2023
Time vent or flare was discovered or commenced	12:00 AM
Time vent or flare was terminated	12:20 AM
Cumulative hours during this event	0

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 64 Mcf Recovered: 0 Mcf Lost: 64 Mcf.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, this was a sudden and unexpected emergency shutdown of the facility due to a third-party provider power outage caused by severe weather and lightning resulting from a severe storm in the area, which triggered flaring to occur.
