1.0 Introduction

EOG Resources Inc. (EOG) retained Vertex Resource Services Inc. (Vertex) to conduct an assessment for two historical produced water releases that occurred on June 8, 2013, and September 23, 2013, at Sawbuck Water Transfer Station (hereafter referred to as "site"). Yates Petroleum Corporation (Yates) submitted an initial C-141 Release Notification (Appendix A) to New Mexico Oil Conservation Division (NMOCD) District 2 on June 10, 2013, and September 23, 2013. Incident ID numbers nJMW1317031601 (2RP-1685) and nJMW1327753065 (2RP-1973) were assigned to these incidents. Yates submitted a remediation work plan that was verbally approved by NMOCD and later submitted a closure report after the remedial activities were completed (Appendix A).

This report provides a description of the assessment activities associated with the site visit by Vertex. The information presented demonstrates that closure criteria established in Table I of 19.15.29.12 of the New Mexico Administrative Code (NMAC; New Mexico Oil Conservation Division, 2018) related to NMOCD has been met and all applicable regulations are being followed. This document is intended to serve as a final report to obtain approval from NMOCD for the closure of these releases, with the the release site also meets requirements instituted in 2018 per NMAC 19.15.29.13.

2.0 Incident Description

The first release (2RP-1685) occurred on June 8, 2023, due to a 12-inch water line main that failed due to the age of the infrastructure. Vacuum trucks were dispatched to recover fluids and the line was shut in and isolated for repairs. The incident was reported on June 10, 2013, and involved the release of 1,850 barrels (bbl) of produced water, and 1,650 bbls of fluid was recovered during the initial clean-up. Additional details relevant to the release are presented in the C-141 Report.

The second release (2RP-1973) occurred on September 23, 2013. The cause of the release was due to an 8 inch leaking water line that failed due to the age of the infrastructure. Vacuum trucks were dispatched to recover the fluids and the line was shut in and isolated for repairs. The incident was reported on September 23, 2013 and involved the release of 8 bbl of produced water, and 5 bbl of fluid was recovered during the initial clean-up. Additional details relevant to the release are presented in the C-141 Report. The Daily Field Report (DFR) and site photographs associated with the site visit are included in Appendix C.

3.0 Site Characteristics

The site is located approximately 8.16 miles southwest of Seven Rivers, New Mexico (Google Inc., 2023). The legal location for the site is Section 23, Township 20 South and Range 24 East in Eddy County, New Mexico. The release area is located on the Bureau of Land Management (BLM) property. An aerial photograph and site schematic are presented in Figure 2.

The Geological Map of New Mexico (New Mexico Bureau of Geology and Mineral Resources, 2023) indicates the site's surface geology primarily comprises Qp – Piedmont alluvial deposits (Holocene to lower Pleistocene). Predominant soil texture on the site is Pima silt and Reagan loam.

The location was typical of oil and gas water disposal sites in the Permian Basin and was used for produced water storage and disposal. The following sections specifically describe the release area at 32.562300, -104.556110 on or in proximity to the constructed pad (Figure 1).

The surrounding landscape is associated with rolling hills and fans with elevations ranging between 1,100 and 5,400 feet. The climate is semiarid with average annual precipitation ranging between 6 and 15 inches. The soil is well-drained with a high runoff. Using information from the United States Department of Agriculture, the dominant vegetation was determined to be Blue grama. Creosote bush, mesquite, and catclaw mimosa are common shrubs (United States Department of Agriculture, Natural Resources Conservation Service, 2023).

4.0 Closure Criteria Determination

Using the characterization information, a closure criteria determination worksheet (Appendix B) was completed to determine if the releases were subject to any special case scenarios outlined in Paragraph (4) of subsection C of 19.15.29.12 NMAC. The nearest groundwater data is more than 25 years old and located more than 0.5 miles away from the release site; therefore, the depth to groundwater cannot be determined accurately. The closure criteria for the site is determined to be associated with the following constituent concentration limits (Table 1).

Table 1. Closure Criteria for Soils Impacted by a Release

Minimum depth below any point within the the horizontal boundary of the release to groundwater less than 10,000 mg/l TDS	Constituent	Limit
< 50 feet	Chloride	600 mg/kg
	TPH (GRO+DRO+MRO)	100 mg/kg
	BTEX	50 mg/kg
	Benzene	10 mg/kg

TDS – total dissolved solids
TPH – total petroleum hydrocarbons, GRO – gas range organics, DRO – diesel range organics, MRO – motor oil range organics
BTEX – benzene, toluene, ethylbenzene and xylenes

5.0 Site Assessment

A remediation work plan for nJMW1317031601 was submitted to NMOCD Artesia by Yates and received on July 18, 2013. Correspondence between Yates, BLM, and NMOCD demonstrates that the work plan was approved on August 7, 2013. As remedial activities were taking place on September 23, 2013, a second release (nJMW1327753065) occurred. The second release was scraped up during remedial activities for the first release. Samples were collected, submitted for analysis, and determined to be below the applicable closure criteria selected for the first release. A closure report for both releases was submitted to NMOCD on February 19, 2014. This documentation is included in Appendix A.

EOG retained Vertex to conduct a field investigation at the site to ensure no remnant impacts remained which would impede reclamation. Investigation efforts began on June 2, 2023, and were finalized on June 5, 2023. Field screening was completed within the remediation area at a point impacted by both releases.

Notification that confirmatory samples were being collected was provided to the NMOCD on May 30, 2023, and is included in Appendix D. Confirmatory samples were collected at one sample point (borehole) impacted by both releases at the site. A total of 5 samples were collected for laboratory analysis following NMOCD soil sampling procedures.

Field screening was completed using Dexsil Petro flag using EPA SW-846 Method 9074 (extractable hydrocarbons) and Hanna DiST 4 EC Meter (chlorides) and HACH Chloride Test Kit. Samples were submitted to Hall Environmental Analysis Laboratory under chain-of-custody protocols and analyzed for BTEX (8021), total petroleum hydrocarbons (GRO, DRO, MRO – EPA Method 8015D), and total chlorides (EPA Method 300.0). Laboratory results are presented in Table 3, and the laboratory data reports are included in Appendix E. All confirmatory samples collected and analyzed were below the closure criteria for the site.

6.0 Closure Denial

After the investigative sampling activities were completed by Vertex, EOG submitted the report requesting closure for the two releases and it was received by NMOCD on August 8, 2023. After review, closure was denied by NMOCD due to a lack of documentation within their internal system confirming the previous approval of the Remediation Plan submitted in 2013. A NMOCD request was made to complete further delineation within the area to ensure that remediation work was completed and that the site met the current guidelines of the 2018 Spill Rule (19.15.29.12 & 13 NMAC). On August 9, 2023, further details were provided during a phone conversation conducted with the NMOCD Environmental Specialist who reviewed the previous Closure Report. This conversation identified two other sample points within the historically impacted area to provide the necessary assurance of proper remediation being completed during the previous activities. As an additional assurance, a third sample point was voluntarily added by EOG after the initial phone conversation.

On August 30, 2023, Vertex returned to the site to collect samples from three additional points (boreholes) to account for the middle and western portions of the release footprint. Upon arrival, it was discovered that one of the proposed sample points (BH23-06) was under a large plash of water due to rainfall; therefore, the proposed point could not be sampled at that time. The sampling for the remaining two points commenced after approximately one foot of the top layer of former pad material from the release area had been previously removed during reclamation activities and hauled to an approved disposal facility. BH23-07 and BH23-08 were then collected at one foot and two feet bgs respectively. The samples collected from these two points inside of the release area showed no signs of remaining impacts through on-site field screening. Therefore, no further samples were required to ensure that remnant impacts no longer existed which would impede the final reclamation of the site. Laboratory results confirmed the on-site observations from field screens as all samples returned results of Non-Detectable (ND) for the constituents of concern. Notification that confirmatory composite samples were being collected was provided to NMOCD on August 25, 2023, and is included in Appendix D.

7.0 Closure Request

Vertex recommends no additional action at the site. Laboratory analyses of confirmation samples collected within the historical impact areas of the releases show final confirmatory values below NMOCD closure criteria for areas where

depth to groundwater is less than 50 feet bgs as presented in Table 1. There are no anticipated risks to human, ecological, or hydrological receptors at this site.

Vertex requests that these incidents (nJMW1317031601 and nJMW1327753065) be closed as all closure requirements set forth in Subsection E of 19.15.29.12 NMAC have been met. EOG certifies that all information in this report and the appendices are correct and that they have complied with all applicable closure requirements and conditions specified in Division rules and directives to meet NMOCD requirements to obtain closure on the site.

Should you have any questions or concerns, please do not hesitate to contact Chance Dixon at 575.988.1472 or cdixon@vertex.ca

Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse. N/A	

If a Watercourse was Impacted, Describe Fully.*
N/A

Describe Cause of Problem and Remedial Action Taken.*
Released was caused from a 12" water line main that failed due to age of infrastructure. Vacuum trucks dispatched to recover fluid. Line shut in and isolated for repairs.

Describe Area Affected and Cleanup Action Taken.*
An approximate area of 250' X 300' was impacted. Impacted soils to be scraped up and taken to an NMOCD approved facility. Vertical and horizontal delineation samples will be taken and analysis ran for TPH & BTEX, Chlorides will be run for documentation. If initial analytical results for TPH & BTEX are under RRAL's a Final Report, C-141 will be submitted to the OCD requesting closure. If the analytical results are above the RRAL's a work plan will be submitted. **Depth to Ground Water: >100' (approximately 225', Section 23-T20S-R24E, per Trend Map), Wellhead Protection Area: No, Distance to Surface Water Body: >1000', SITE RANKING IS 0.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: ***Each of the following items must be included in the closure report.***

☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC

☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)

☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)

☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: ***Each of the following items must be included in the closure report.***

☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC

☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)

☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)

☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

RE: Sawbuck Water Transfer
Lease # NM-86241
2RP-1685
Section 22, T20S-R24E
Eddy County, New Mexico

Mr. Bratcher,

Yates Petroleum Corporation would like to submit the enclosed documents as documentation for the work performed at the above captioned release. These documents are in response to the C-141 Initial report submitted July 7, 2013.

The release was caused by a 12" water main that failed due to the age of the infrastructure in the area. The total volume of produced water released was 1850 bbls with 1650 bbls recovered. The release was contained within the bermed facility with the exception of a small area that leached through the saturated berm. The impacted area has been scraped and any further staining will be removed. The saturated berm on the south side of the facility will be removed and replaced with clean caliche. All impacted soils have and will be disposed at an NMOCD approved facility.

The impacted area was divided up into four areas for sampling (S1, S2, S3, S4). The areas chosen were based on the safety aspect in regards to the amount of buried lines through the impacted area. S1 and S2 were found to be in the old pit area associated with the Hill View AHE #2 which has been plugged and abandoned. Sampling ceased at a depth of 1' due to the finding of the existing pit liner. Sampling of the S4 area ceased at a depth of 3' due to a buried electrical line in the area that was not marked with markers or during the NM One Call.

Due to the associated hazards in the area and the discover of an existing pit, Yates Petroleum Corp. is requesting that no further actions be taken beyond what has been describe in this letter. If there are no objections or further stipulations, a C-141 Final will be submitted for approval. Please feel free to contact me with any questions at (575) 748-4350.

Thank you,

Lupe Carrasco
Environmental Regulatory Agent

RE: SAWBUCK WATER TRANSFER

Enclosed are the results of analyses for samples received by the laboratory on 06/26/13 8:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Celey D. Keene

RE: Sawbuck Water Transfer
Lease # NM-86241
2RP-1685
Section 22, T20S-R24E
Eddy County, New Mexico

Mr. Bratcher/Mr. Whitlock,

Yates Petroleum Corporation would like to submit the enclosed documents as documentation for the work performed at the above captioned release. These documents are in response to the C-141 Initial reports submitted July 7, 2013 and October 4, 2014.

The initial work plan submitted on July 18, 2013, had an extra stipulation from both OCD and BLM. It was agreed that Yates would excavate the S1 area down past 2' to address the BTEX levels in this area. Prior to excavation, the second release occurred during the repair of the berms around the location. The backhoe operator noticed a release of approximately 8 barrels of produced water. The release flowed into the S1 area where a vacuum truck recovered about 5 barrels. Once recovered, the back hoe operator excavated approximately 2.5 – 3' from the impacted area including the berm on the south side of the location. All impacted soil was disposed at an NMOCD approved facility. The area was sampled for delineation purposes.

The S1/Spill 2 excavation area has not been backfilled with the exception of the berms on the south side and west side which had to be replaced due to severe flooding of the area in 2013.

Based on the impacted soils excavated/hauled and the enclosed data, Yates Petroleum Corporation requests closure of the site and permission to backfill the S1/Spill 2 area. Please feel free to contact me with any questions at (575) 748-1471.

Thank you,

Lupe Carrasco
Senior Environmental & Regulatory
Affairs Coordinator

Michael,

I just wanted to follow up on the work plan I sent you for the Sawbuck Water Transfer. I have not performed any of the work due to the storm events. I am hoping it dries out this week so that I can get a contractor on this project early next week. Let me know if you have any questions.

Thanks!

Subject: Sawbuck Water Transfer

Jim,

Michael Burton and I talked on the phone this morning in regards to the Sawbuck Water Transfer. He said you and him had talked about what you would like done at the Sawbuck Water Transfer. In talking to Michael Burton he mentioned that you would like the S1 excavated down about a 1'. He advised that I speak with you in regards to this and any other concerns you might have with the impacted area. It sounds like your thoughts are going to align with Mike Bratcher's thoughts about excavation.

Mike Bratcher and I met on July 18, 2013, in his office to discuss the impacted area. I agreed with Mike Bratcher that I would excavate the S1 area down to 1' to address the BTEX levels. The S1 area and the S2 areas are associated with the old pit area of the Hill View AHE #2 well which has been plugged and abandoned. I will also be removing the berm that borders the S1 area and plan to replace it with new caliche when I back fill the S1 area.

Let me know if you have any other areas of concern and if the S1 work aligns with what you would like to see done for this site.

Thanks!

Mr. Bratcher,

As per our conversation this morning in your office, I will continue with the plan of removing 1' of the impacted material at the Sawbuck Water Transfer. I will remove approximately 1' of impacted material from the area labeled as S1 on the work plan submitted. Once the area has been excavated, I will delineate further to ensure that the hydrocarbons are within permissible levels. I will notify you once I receive my results to discuss any further work performed. All impacted material will be disposed at an NMOCD approved site. If you have any question please feel free to contact me.

RE: SAWBUCK WATER TRANSFER

Enclosed are the results of analyses for samples received by the laboratory on 06/26/13 8:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

RE: SAWBUCK WATER TRANSFER

Enclosed are the results of analyses for samples received by the laboratory on 09/04/13 11:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Celey D. Keene

RE: SAWBUCK WATER TRANSFER

Enclosed are the results of analyses for samples received by the laboratory on 10/09/13 14:50.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/13/2021 at 2:34 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico
Survey Area Data: Version 16, Jun 8, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 27, 2020—Feb 28, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
PM	Pima silt loam, 0 to 1 percent slopes	1.1	27.1%
RA	Reagan loam, 0 to 3 percent slopes	3.0	72.9%
Totals for Area of Interest		**4.2**	**100.0%**

Eddy Area, New Mexico

PM—Pima silt loam, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 1w56
Elevation: 600 to 4,200 feet
Mean annual precipitation: 8 to 25 inches
Mean annual air temperature: 60 to 70 degrees F
Frost-free period: 195 to 290 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Pima and similar soils: 98 percent
Minor components: 2 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pima

Setting

Landform: Alluvial fans, alluvial flats, flood plains
Landform position (three-dimensional): Rise, talf
Down-slope shape: Linear, convex
Across-slope shape: Linear, convex
Parent material: Alluvium

Typical profile

H1 - 0 to 3 inches: silt loam
H2 - 3 to 60 inches: silty clay loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: RareNone
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Maximum salinity: Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)
Sodium adsorption ratio, maximum: 1.0
Available water supply, 0 to 60 inches: High (about 11.9 inches)

Interpretive groups

Eddy Area, New Mexico

RA—Reagan loam, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 1w5c
Elevation: 1,100 to 4,400 feet
Mean annual precipitation: 7 to 14 inches
Mean annual air temperature: 60 to 70 degrees F
Frost-free period: 200 to 240 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Reagan and similar soils: 98 percent
Minor components: 2 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Reagan

Setting

Landform: Alluvial fans, fan remnants
Landform position (three-dimensional): Rise
Down-slope shape: Linear, convex
Across-slope shape: Linear
Parent material: Alluvium and/or eolian deposits

Typical profile

H1 - 0 to 8 inches: loam
H2 - 8 to 60 inches: loam

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 40 percent
Maximum salinity: Very slightly saline to moderately saline (2.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 1.0
Available water supply, 0 to 60 inches: Moderate (about 8.2 inches)

RE: Sawbuck Water Transfer OrderNo.: 2306177

Dear Chance Dixon:

Hall Environmental Analysis Laboratory received 8 sample(s) on 6/6/2023 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

RE: Sawbuck Water Transfer OrderNo.: 2309003

Dear Chance Dixon:

Hall Environmental Analysis Laboratory received 4 sample(s) on 9/1/2023 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Above Quantitation Range/Estimated Value
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of standard limits. If undiluted results may be estimated.

Sample Log-In Check List

Client Name: EOG | Work Order Number: 2309003 | RcptNo: 1

Received By: **Steve McQuiston** 9/1/2023 7:35:00 AM

Completed By: **Desiree Dominguez** 9/1/2023 8:04:24 AM

Reviewed By: 9/1/23

Chain of Custody

1. Is Chain of Custody complete?	Yes ☐	No ☑	Not Present ☐
2. How was the sample delivered?	Courier		

Log In

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☐	No ☐	NA ☑
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	

# of preserved bottles checked for pH: _____ (<2 or >12 unless noted)

Adjusted? _____
