Santa Fe, New Mexico 87505

**Re: Closure Request
EVGSAU 2437-001
Incident Numbers NAPP2303273838 and NAPP2334650001
Lea County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Maverick Permian, LLC (Maverick), has prepared this *Closure Request* as a follow-up to the *Remediation Work Plan (Work Plan)* submitted to the New Mexico Oil Conservation Division (NMOCD) on July 13, 2023, and approved by NMOCD on October 6, 2023. This *Closure Request* documents excavation, delineation, and liner installation activities performed at the EVGSAU 2437-001 (Site) to address impacts to soil resulting from two releases of crude oil and produced water at the Site. Based on the remediation activities completed as outlined in the approved *Work Plan*, Maverick is submitting this *Closure Request*, describing remediation that has occurred and requesting closure for Incident Numbers NAPP2303273838 and NAPP2334650001.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in Unit P, Section 24, Township 17 South, Range 34 East, in Lea County, New Mexico (32.816832° N, -103.506018° W) and is associated with oil and gas exploration and production operations on state land managed by the New Mexico State Land Office (SLO).

On January 10, 2023, corrosion of a flow line resulted in the release of approximately 2.67 barrels (bbls) of crude oil and 6.23 bbls of produced water into the surrounding pasture. No fluids were recovered. The release occurred on the surface of a historical/reclaimed Phillips Petroleum well pad (API 30-025-27337). Maverick reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Release Notification Form C-141 (Form C-141) on January 19, 2023. The release was assigned Incident Number NAPP2303273838.

On December 11, 2023, the same flow line released approximately 18 bbls of crude oil and 6 bbls of produced water into the open excavation associated with remediation activities for Incident Number NAPP2303273838. The released fluids were contained in the open excavation and a vacuum truck was used to recover approximately 9 bbls of crude oil and 6 bbls of produced water. Maverick reported the release to the NMOCD and NMSLO on a Form C-141 on December 21, 2023. The release was assigned Incident Number nAPP2334650001.

Since the release area was in the pasture, the release location was assessed for determination of whether the release encroached into undisturbed areas to comply with the Cultural Properties Protection

Maverick Permian, LLC
Closure Request
EVGSAU 2437-001

Page 2

Rule (CPP). Ensolum contracted Beaver Creek Archeology to conduct an Archaeological Records Management System (ARMS) review. Based on a review of prior cultural resource surveys that overlap the release extent, no cultural resources were identified within and/or around the release extent requiring oversight or modifications to remediation efforts. No additional cultural resource surveys were completed in connection with this release. The NMSLO was initially notified of excavation and remediation activities required in the pasture on a Right of Entry Request for Remediation form, submitted to the NMSLO on March 17, 2023. The request included a copy of the Form C-141, a topographic location map, and a satellite image of the location. The Right of Entry (ROE) Permit (RE-6494) was fully executed by the NMSLO and received by Maverick on April 11, 2023. A copy of the fully executed ROE Permit and the NMSLO Cultural Resources Cover Sheet, is included as Appendix A.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29 (19.15.29) of the New Mexico Administrative Code (NMAC). Results from the characterization desktop review are presented on page 3 of the Form C-141, Site Assessment/Characterization. Potential Site receptors are identified on Figure 1.

Depth to groundwater at the Site is estimated to be between 51 and 100 feet below ground surface (bgs) based on the nearest groundwater well data. The closest permitted groundwater well with depth to groundwater data is United States Geologic Survey (USGS) Well 324854103301101, located approximately 925 feet southeast of the Site. The groundwater well has a reported depth to groundwater of 76.7 feet bgs and a total depth of 226 feet bgs. All wells used for depth to groundwater determination are depicted on Figure 1 and the referenced well records are included in Appendix B.

The closest continuously flowing or significant watercourse to the Site is a dry playa, located approximately 825 feet east of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is not underlain by unstable geology (low potential karst designation area). The Site is less than 1,000 feet to a water well. Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table 1 Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH): 100 mg/kg
- Chloride: 600 mg/kg

BACKGROUND

As detailed in the approved *Work Plan*, Ensolum personnel were at the Site between January 18, 2023, and May 8, 2023, to oversee excavation activities based on visible staining in the release area and laboratory analytical results for assessment soil samples SS01 through SS05. During excavation activities, visible indications of a historical pit were encountered at approximately 3 feet bgs. Upon encountering the historical pit, vertical excavation was halted. The excavation proceeded laterally within the release extent until sidewall samples were compliant with the Site Closure Criteria. Potholes PH01 and PH02 were advanced via track mounted backhoe within the 3-foot-deep excavation to depths of 11 feet and 7 feet bgs, respectively, to delineate the vertical extent of the impacted soil within the historical pit. Laboratory analytical results for the excavation sidewall samples were compliant with the Site

Maverick Permian, LLC
Closure Request
EVGSAU 2437-001

Page 3

Closure Criteria. Laboratory analytical results for the final depth delineation samples from potholes PH01 and PH02, collected at depths of 10 feet and 7 feet bgs, indicated all COC concentrations were compliant with the Site Closure Criteria and provided vertical delineation of impacted soil within the historical pit.

Based on the laboratory analytical results, a *Work Plan* was submitted to the NMOCD on July 13, 2023. The *Work Plan* proposed excavation of impacted soil to a depth of 4 feet bgs and installation of a liner in the floor of the excavation (over the historical pit) to mitigate further impacts to the subsurface. Additional details regarding the excavation, delineation, soil sampling activities, and proposed work plan can be referenced in the July 13, 2023, *Work Plan*. The *Work Plan* was approved by the NMOCD on October 6, 2023, with no conditions. The *Work Plan* was approved by the NMSLO on November 2, 2023, with the condition that the installed liner must be a clay liner not a poly liner.

On December 11, 2023, prior to commencement of remediation activities, a second flow line release occurred at the Site (Incident Number NAPP2334650001). The released fluids impacted the open excavation associated with Incident Number NAPP2303273838. The NMOCD and NMSLO were contacted to discuss the continued application of the approved *Work Plan*. The NMOCD and NMSLO agreed to proceed with the approved *Work Plan* with the following conditions:

- The excavation will be deepened to a depth of 4 feet bgs, per the approved *Work Plan*.
- The sidewalls of the excavation will be extended as necessary to remove the impacted soil associated with the new release. Sidewall samples will be collected from the final excavation extent to confirm compliance with the Site Closure Criteria in the top four feet.
- New potholes will be advanced within the release extent to re-confirm the vertical extent of impacted soil after the second release occurred.
- A clay liner will be installed over the historical pit to mitigate further impacts to the subsurface. The clay liner will be installed at 4 feet bgs within the open excavation.
 - Based on the pothole delineation data and liner installation in the floor of the excavation, no floor samples were proposed in the approved *Work Plan*.

EXCAVATION AND DELINEATION ACTIVITIES

Between January 12, 2024, and January 18, 2024, Ensolum personnel were at the Site to oversee delineation, excavation, and liner installation activities as outlined in the approved *Work Plan* and in accordance with the NMOCD/NMSLO conditions detailed above.

Assessment soil samples SS06 through SS09 were collected around the release from a depth of approximately 0.5 feet bgs, to confirm the surface extent of the second release. The soil samples were field screened for volatile organic compounds (VOCs) utilizing a calibrated photoionization detector (PID) and chloride using Hach® chloride QuanTab® test strips. The release extent and assessment soil sample locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 2.

The existing open excavation was extended laterally to remove impacted soil from the excavation sidewalls, that were impacted by the second release. To direct excavation activities, soil was field screened for VOCs and chloride. The excavation was extended vertically to a total depth of 4 feet bgs across the entire release extent. Following lateral and vertical excavation of the impacted soil, 5-point composite soil samples were collected every 200 square feet from the sidewalls of the excavation. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples SW01 through SW03, SW04/SW04A, SW05, and SW06 were collected from the sidewalls of the

Maverick Permian, LLC
Closure Request
EVGSAU 2437-001

Page 4

excavation at depths ranging from the ground surface to 4 feet bgs. The excavation extent and soil sample locations were mapped utilizing a handheld GPS and are presented on Figure 3.

Two potholes (PH01 and PH02) were advanced within the open excavation to depths of 9 feet and 8 feet bgs, respectively. Soil from the potholes was field screened at 1-foot intervals for VOCs and chloride. Final depth of the potholes was determined by field screening results indicating compliance with the Site Closure Criteria. Field screening results and observations for the potholes were logged on lithologic soil sampling logs, which are included in Appendix C. Discrete delineation samples were selected from each pothole for laboratory analysis; the samples with the highest field screening results and the sample from the final pothole depth. The pothole and delineation soil sample locations are presented on Figure 2. Photographic documentation was completed during the excavation and delineation activities. A photographic log is included in Appendix D.

The assessment, delineation, and excavation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported at or below 4 degrees Celsius (°C) under strict chain-of-custody procedures to Cardinal Laboratories (Cardinal) in Carlsbad, New Mexico, for analysis of the following contaminants of concern (COC): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following Standard Method SM 4500.

The excavation measured approximately 5,500 square feet in areal extent. A total of approximately 830 cubic yards of impacted soil was excavated, transported, and properly disposed at R360 Environmental Solutions in Hobbs, New Mexico.

LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for assessment samples SS06 through SS09, collected around the release extent, indicated all COC concentrations were compliant with the Site Closure Criteria, and successfully defined the lateral extent of the surface release.

Laboratory analytical results for excavation sidewall samples SW01 through SW03, SW04A, SW05, and SW06, collected from the final excavation extent, indicated all COC concentrations were compliant with the Site Closure Criteria and confirmed removal of impacted soil from the top 4 feet of the release extent. Sidewall sample SW04 initially exceeded the Site Closure Criteria for chloride, additional soil was removed from the sidewall and subsequent sidewall sample SW04A was compliant.

Laboratory analytical results and field screening results for the pothole PH01 and PH02 delineation samples indicated that chloride concentrations exceeded the Site Closure Criteria within the historical pit at depths ranging from 4 feet to 8 feet bgs. Laboratory analytical results for the final depth pothole delineation samples, collected at depths of 8 feet and 9 feet bgs, indicated all COC concentrations were compliant with the Site Closure Criteria and provided vertical delineation of impacted soil within the historical pit. The laboratory analytical results are summarized on the attached Table 1 and the complete laboratory analytical reports are included in Appendix E.

CLAY LINER INSTALLATION AND RECLAMATION ACTIVITIES

Upon completion of the excavation and delineation activities, and receipt of final laboratory analytical results, the clay liner was installed. The clay liner was installed in the floor of the open excavation at a depth of 4 feet bgs to mitigate further impacts to the subsurface. Photographic documentation was completed during the liner installation activities. A photographic log is included in Appendix D.

Maverick Permian, LLC
Closure Request
EVGSAU 2437-001

Page 5

Upon completion of liner installation, the excavation was backfilled with caliche and topsoil and the disturbed area was recontoured to match the surrounding topography. The disturbed area was seeded on January 23, 2024. The Reclamation Plan submitted with the July 13, 2023, *Work Plan* was followed at this Site. Vegetation monitoring will be completed as outlined in the Reclamation Plan, which is included in Appendix F.

CLOSURE REQUEST

Excavation, delineation, and liner installation activities were conducted at the Site to address the January 10, 2023, and December 11, 2023 releases of crude oil and produced water. Laboratory analytical results for the excavation sidewall samples, collected from the final excavation extent, indicated all COC concentrations were compliant with the Site Closure Criteria and reclamation requirements. Additionally, the impacted soil was vertically delineated to below the most stringent Table I Closure Criteria and a clay liner was installed in the floor of the 4-foot-deep excavation to mitigate further impacts to the subsurface. Based on the excavation and delineation activities, and installation of a clay liner as outlined in the approved *Work Plan*, no further remediation is required.

Maverick believes the remedial actions completed are protective of human health, the environment, and groundwater and respectfully requests closure for Incident Numbers NAPP2303273838 and NAPP2334650001. NMOCD notifications are included in Appendix G and a copy of the approved *Remediation Work Plan* is included as Appendix H.

If you have any questions or comments, please contact Ms. Aimee Cole at (720) 384-7365 or acole@ensolum.com.

Form Revised 12 22

Stephanie Garcia Richard
Commissioner of Public Lands

RIGHT OF ENTRY REQUEST FOR REMEDIATION

Company Name Maverick Natural Resources, LLC
 Address 1410 NW County Rd
 City, State, Zip Hobbs, NM 88240
 Contact Person: Bryce Wagoner
 Telephone #: (928) 241-1862
 Email: Bryce.Wagoner@mavresources.com

Purpose of request: Request to remediate soil impacted by a release of crude oil and produced water at the Site. The soil will be excavated and transported to a licensed disposal facility. All remediation activities will comply with NMOCD spill rules (19.15.29 NMAC). We expect to complete activities within 3 weeks.

Section 24 Township 17S Range 34E Unit Letter P

Qtr/Qtr SE/SE County Lea

GPS Location (decimal degrees): Latitude 32.81668 W Longitude -103.50599 N

If this is a remediation for a spill please attach a copy of the OCD C-141 form.

Is the completed C-141 attached? Yes ☒ No ☐

Square footage of spill impacted surface: 4,162 sq. ft.

Estimated square footage of total disturbance: 63,275 sq. ft.

Reclamation Plan (*attach addl. sheet if necessary*) Maverick will backfill the excavation with clean backfill soil, including purchased topsoil for the upper 4 ft, if the excavation reaches that depth.

The backfilled area will be contoured to match natural surroundings and seeded with an approved BLM seed mixture.

Driving directions from nearest state highway or road (*attach a map of the location*):

From intersection of CR-50 (Buckeye Rd) and NM-238 N, head North on NM-238 N and continue for 0.72 miles. Turn right onto unnamed access road and continue for 0.32 miles. Turn left and follow to Site approximately 0.14 miles.

Lease number associated with the ROE request: B014040008

Well Name and/or Operator (if applicable): EVGSAU 2437-001

Time expected to complete remediation: 3 weeks

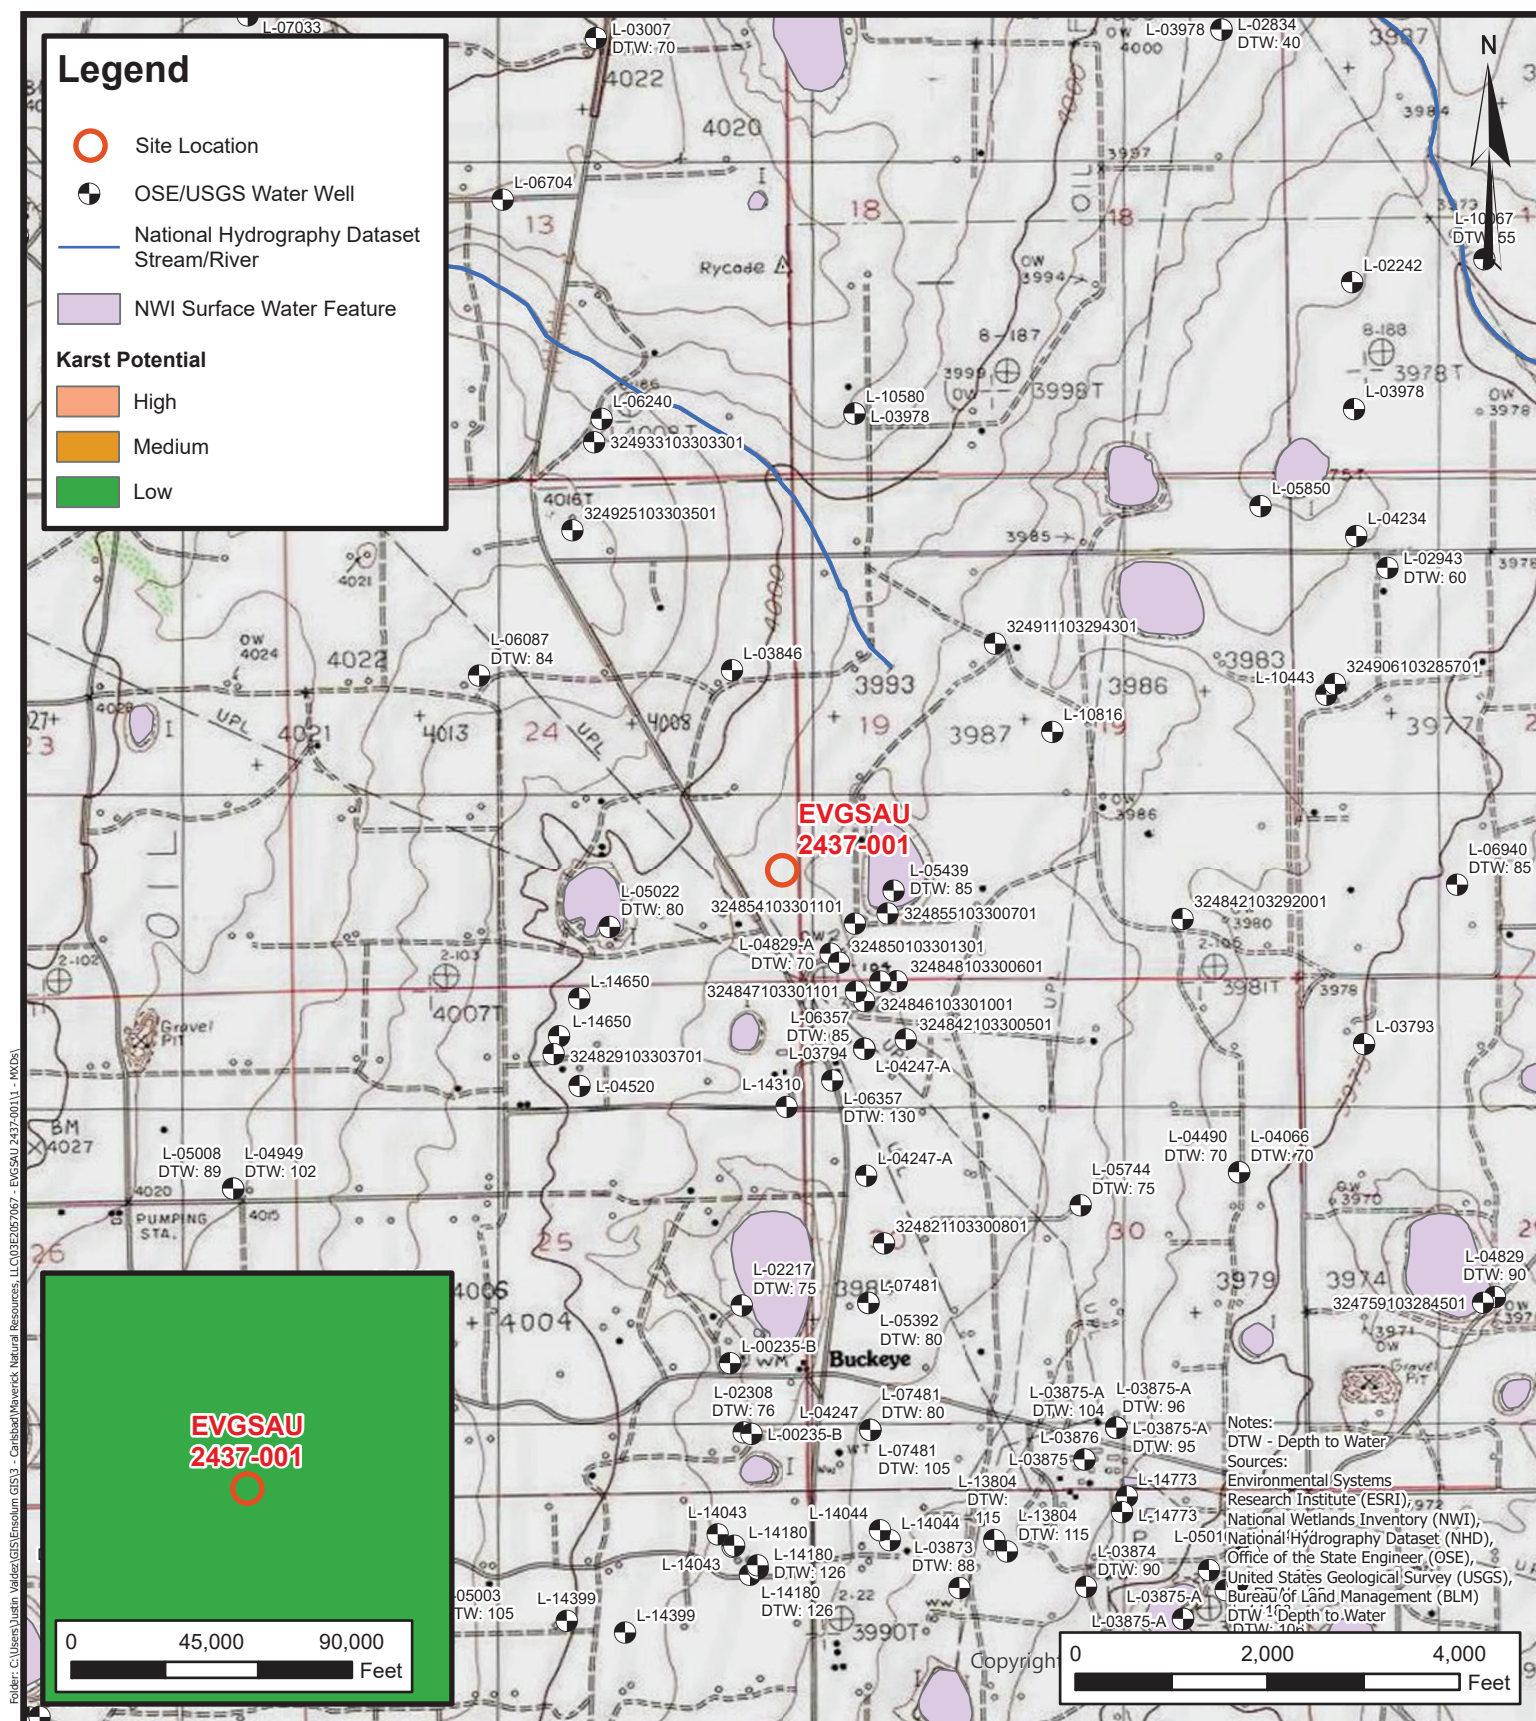

Personnel present on State Land crew and environmental oversight

Equipment & materials present on State Land Yes; backhoe or trackhoe and loader

\$50.00 application fee and \$500.00 permit amount (based on 180 days) renewable for up to 3 yrs.

Payable to: The Commissioner of Public Lands
P. O. Box 1148
Santa Fe, NM 87504-1148

2. TERM AND TERMINATION

Right of entry is granted for a term of **180 days**, commencing on the execution date of this document by the Commissioner of Public Lands.

3. FEES

\$ 50.00 Application Fee
\$ 500.00 Permit Fee
\$ 550.00 Total Fee

4. CONDITIONS OF USE

- A. The issuance of this ROE does not guarantee that any subsequent lease, permit or any other instrument will be issued to Permittee for the Premises.
- B. No blading or widening of any roads that provide access to the Premises is permitted under this ROE.
- C. No sale of any material extracted from the Premises is allowed under this ROE.
- D. Permittee shall observe all applicable federal, state and local laws and regulations.
- E. Permittee shall take all reasonable precautions to prevent and suppress forest, brush and grass fires and prevent pollution of waters on or in the vicinity of the Premises.
- F. Permittee shall not block or disrupt roads or trails commonly in use.
- G. This ROE is subject to any and all easements and rights-of-way previously granted and now in force and affect.
- H. Permittee shall be responsible for repair and restitution for damage to any Premises or improvements as a result of activities related to this ROE.
- I. Prior to entering the Premises, Permittee must identify and contact any existing surface lessees. The grant of this ROE does not allow access across private lands.
- J. Permittee may utilize this ROE upon its execution for inspection of the Premises and to conduct any necessary tests or inspections. Permittee may not conduct remediation or reclamation work until it has submitted a written plan for such work, and received State Land Office approval.
- K. Personnel present on State Land: **Maverick Natural Resources personnel and contractors.**
- L. Equipment and materials present on State Land: **Heavy equipment, trucks, and associated materials.**

5. SITE CONDITIONS

- A. No surface disturbance, other than soil sampling, except as described in a reclamation plan submitted to and approved by the State Land Office.
- B. Access to the Premises shall be over existing roads.
- C. The natural environmental conditions that exist contemporaneously with this grant of ROE shall be preserved and protected. Permittee must follow all applicable environmental and cultural resource protection laws and regulations.

6. INDEMNITY

Permittee shall save, hold harmless, indemnify and defend the State of New Mexico, the Commissioner and Commissioner's employees, agents and contractors, in both their official and individual capacities, from any and all liability, claims, losses, damages, or expenses of any character or nature whatsoever, including but not limited to attorney's fees, court costs, loss of land value or use, third party claims, penalties, or removal, remedial or restoration costs arising out of, or alleged to arise out of Permittee's operations or presence on the Premises (or operations or presence of his representatives, employees, or contractors).

7. SURVIVAL OF TERMS

Permittee's obligations regarding indemnity, site conditions, and compliance with applicable standards and laws, shall survive the termination, cancellation or relinquishment of this Agreement, and any cause of action of the Commissioner to enforce any right, liability, claim, loss, damage or expense under those paragraphs shall not be deemed to accrue until the Commissioner's actual discovery of said right, liability, claim, loss, damage or expense.

8. NOTIFICATION

Permittee must notify the State Land Office immediately in the event Permittee or his representatives, employees, or contractors observe any spill, fire, or other emergency on the Premises, or if Permittee or his representatives, employees, or contractors experience any serious injury while on the Premises.

WITNESS the hands of PERMITTEE and COMMISSIONER on the day(s) and year entered below.

Qualifiers

GC VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Ensolum
Project/Site: EVGSU 2437-001

Job ID: 890-3833-1
SDG: Lea County

Job ID: 890-3833-1

Laboratory: Eurofins Carlsbad

Narrative

Job Narrative
890-3833-1

Receipt

The samples were received on 1/11/2023 4:35 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.0°C

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS01 (890-3833-1), SS02 (890-3833-2), SS03 (890-3833-3), SS04 (890-3833-4), SS05 (890-3833-5), SS06 (890-3833-6), SS07 (890-3833-7) and SS08 (890-3833-8).

GC VOA

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS01 (890-3833-1) and SS02 (890-3833-2). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS03 (890-3833-3) and SS04 (890-3833-4). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 880-43910 and analytical batch 880-43961 was outside control limits. Sample matrix interference and/or non-homogeneity is suspected.

Method 8021B: LCSD biased high. Since only an acceptable LCS is required per the method, the data has been qualified and reported. (LCSD 880-43910/2-A)

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS01 (890-3833-1) and SS02 (890-3833-2). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-43991 and analytical batch 880-44129 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS01 (890-3833-1), SS02 (890-3833-2), SS03 (890-3833-3), SS04 (890-3833-4), SS05 (890-3833-5), SS07 (890-3833-7), SS08 (890-3833-8), (MB 880-43909/1-A) and (890-3831-A-1-A). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with preparation batch 880-43970 and analytical batch 880-44164 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Chloride in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method 300_ORGFM_28D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 880-43970 and analytical batch 880-44164 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

RE: EVGSAU 2437 - 001

Enclosed are the results of analyses for samples received by the laboratory on 01/12/24 13:21.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-23-16. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: EVGSAU 2437 - 001

Enclosed are the results of analyses for samples received by the laboratory on 01/17/24 16:18.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-23-16. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: EVGSAU 2437 - 001

Enclosed are the results of analyses for samples received by the laboratory on 01/15/24 12:37.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-23-16. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

RE: EVGSAU 2437 - 001

Enclosed are the results of analyses for samples received by the laboratory on 01/18/24 13:02.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-23-16. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

APPENDIX F NMSLO Reclamation Plan

Reclamation Plan

The release occurred in a pasture area and as such, reclamation requirements set forth in 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation were applied.

The following Reclamation Plan addresses reclamation of the off-pad excavation area and has been developed through review and application of the *Revegetation Guidelines Handbook for Southeastern New Mexico* – Version 1-1, authored by NMSLO and dated 2018, and 19.2.100.67 NMAC – *Surface Reclamation on State Oil and Gas Leases*:

- The excavation will be backfilled with locally sourced caliche and topsoil to match surrounding grade. A minimum of 1-foot of topsoil will be placed on top of the caliche to support vegetative growth within the disturbed area;
- Soil in the vicinity of the release in the pasture will be assessed for the proper application of *Table 3 - Revegetation Plans, Codes, and Soil Types for Southeastern New Mexico*;
- The backfilled areas will be seeded utilizing a weed-free seed mix designed listed in the table below;

Common Name and Preferred Variety	Scientific Name	PLS Per Acre
Annual Quick-cover Grass		
Oats	<i>Avena sativa</i>	1.00
Cool Season Grass		
Western Wheatgrass	<i>Agropyron smithii</i>	2.50
Warm-Season Grass		
Black or Blue Grama	<i>Boutela gracilis</i> var. <i>Alma</i>	1.50
Little Bluestem	<i>Schizachyrium scoparium</i>	0.50
Sand Dropseed	<i>Sporobolus cryptandrus</i>	0.50
Sand Bluestem	<i>Andropogon hallii</i>	1.00
Indiangrass	<i>Sorghastrum nutans</i>	0.50
Sideoats Grama	<i>Bouteloua curtipendula</i> var. <i>Vaughn</i>	2.00
Wildflowers/ Forbs		
White prairie clover	<i>Dalea candida</i>	0.10
Scarlet globemallow	<i>Sphaeralcea coccinea</i>	0.10
Chia Sage	<i>Salvia columbariae</i>	0.10
Annual sunflower	<i>Helianthus annuus</i>	0.10
Annual buckwheat	<i>Eriogonum annuum</i>	0.10

- The seed mixture will be distributed with one or more of the following methods: push broadcaster seed spreader, tractor operated broadcast seed spreader, and/or drill seeding based on Site conditions and contractor availability;
- Application of the seed mixture will be at a coverage of 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method;

- Erosion control management is not anticipated since the proposed excavation area is relatively flat; however, in the event erosion control management is necessary to support vegetation growth and minimize erosion until the root structures take hold, the application of the following best management practices (BMPs) could potentially include:
 - Prompt revegetation with mulching and contouring the ground surface to limit surface water flow;
 - The placement of wattles in areas with a propensity for high run off rates;
 - Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
 - Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas;
- Seeding is anticipated to be completed in the when temperatures and precipitation are most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost. NMSLO has recognized the optimal time to seed is between July and early September, which will be the preferred timeframe for this Site;
- Annual inspections (at a minimum) will take place at the location until revegetation is consistent with local natural vegetation density. The Site will be inspected the following growing season to assess the success of regrowth. If necessary, an additional application of the NMSLO-approved pure live seed mixture will be applied as well as any needed BMPs will be installed to support growth and limit erosion; and
- Upon completion of revegetation, a copy of the C-103 submitted to NMOCD will also be submitted to NMSLO for final inspection and release.

To Whom It May Concern,

Extension Request - EVGSAU 2437-001 (NAPP2303273838)
Maverick Permian, LLC (Maverick) is requesting an extension of the current January 2, 2024, deadline for submitting a report required in 9.15.29.12.B.(1) NMAC, detailing remedial actions at the EVGSAU 2437-001 (Incident ID NAPP2303273838). A Remediation Work Plan for this release was approved by the NMOCD on October 2, 2023, and remediation activities were scheduled. Prior to completing the remediation activities, a second release occurred at the site (Incident ID nAPP2334650001) which affected the existing open excavation. Initial response efforts have been completed for the second release and Maverick intends to complete remediation for both releases simultaneously. In order to complete additional excavation and remediation activities, review the soil sample laboratory analytical results, and prepare a closure report for both releases at the site, Maverick requests a 60-day extension until March 2, 2024.

Thank you,

Aimee Cole

APPENDIX H

REMEDIATION WORK PLAN (July 2023)

July 11, 2023

New Mexico Oil Conservation Division

New Mexico Energy, Minerals, and Natural Resources Department
1220 South St. Francis Drive
Santa Fe, New Mexico 87505

**Re: Remediation Work Plan
EVGSAU 2437-001
Incident Number NAPP2303273838
Lea County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum) on behalf of Maverick Permian, LLC (Maverick), has prepared the following *Remediation Work Plan (Work Plan)* to document the site assessment and excavation activities completed to date and propose a work plan to address the historical impacted soil identified at the EVGSAU 2437-001 flow line release (Site). The following *Work Plan* proposes additional excavation of impacted soil and installation of a 20-mil impermeable liner in the floor of the excavation.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in Unit P, Section 24, Township 17 South, Range 34 East, in Lea County, New Mexico (32.816832° N, -103.506018° W) and is associated with oil and gas exploration and production operations on New Mexico State Land.

On January 10, 2023, corrosion of a flow line resulted in the release of approximately 2.67 barrels (bbls) of crude oil and 6.23 bbls of produced water into the surrounding pasture. No fluids were recovered. The release occurred on the surface of a historical/reclaimed Phillips Petroleum well pad (API 30-025-27337). Maverick reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Release Notification Form C-141 (Form C-141) on January 19, 2023. The release was assigned Incident Number NAPP2303273838.

The NMSLO was notified of excavation and remediation activities required in the pasture on a Right of Entry Request for Remediation form, submitted to the NMSLO on March 17, 2023. The request included a copy of the Form C-141, a topographic location map, and a satellite image of the location. The Right of Entry (ROE) Permit (RE-6494) was fully executed by the NMSLO and received by Maverick on April 11, 2023. No additional cultural resource surveys were completed in connection with this release. A copy of the ROE Request for Remediation form and fully executed ROE Permit, are included in Appendix A.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess applicability of Table 1, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29 (19.15.29) of the New Mexico Administrative Code (NMAC).

Maverick Permian, LLC
Remediation Work Plan
EVGSAU 2437-001

Results from the characterization desktop review are presented on page 3 of the Form C-141, Site Assessment/Characterization. Potential site receptors are identified on Figure 1.

Depth to groundwater at the Site is estimated to be between 51 and 100 feet below ground surface (bgs) based on the nearest groundwater well data. The closest permitted groundwater well with depth to groundwater data is United States Geologic Survey (USGS) Well 324854103301101, located approximately 925 feet southeast of the Site. The groundwater well has a reported depth to groundwater of 76.7 feet bgs and a total depth of 226 feet bgs. All wells used for depth to groundwater determination are depicted on Figure 1 and the referenced well records are included in Appendix B.

The closest continuously flowing or significant watercourse to the Site is a dry playa, located approximately 825 feet east of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is not underlain by unstable geology (low potential karst designation area). The Site is less than 1,000 feet to a water well. Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table 1 Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH): 100 mg/kg
- Chloride: 600 mg/kg

SITE ASSESSMENT ACTIVITIES

On January 11, 2023, Ensolum personnel completed a Site visit to evaluate the release extent based on information provided on the Form C-141 and visual observations. Assessment soil samples SS01 through SS09 were collected within and around the release from a depth of approximately 0.5 feet bgs, to assess the extent of the release. The soil samples were field screened for volatile organic compounds (VOCs) utilizing a calibrated photoionization detector (PID) and chloride using Hach® chloride QuanTab® test strips. The release extent and assessment soil sample locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 2. Photographic documentation was completed during the Site visit and a photographic log is included in Appendix C.

The soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported at or below 4 degrees Celsius (°C) under strict chain-of-custody procedures to Cardinal Laboratories (Cardinal) in Carlsbad, New Mexico, for analysis of the following contaminants of concern (COC): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

Laboratory analytical results for assessment soil samples SS01 through SS05, collected within the release extent, indicated that BTEX, TPH, and chloride concentrations exceeded the Site Closure Criteria. Laboratory analytical results for assessment samples SS06 through SS09, collected around the release extent, indicated all COC concentrations were compliant with the most stringent Table I Closure Criteria, and successfully defined the lateral extent of the release. The laboratory analytical results are summarized on the attached Table 1.

Maverick Permian, LLC
Remediation Work Plan
EVGSAU 2437-001

Based on visible staining in the release area, elevated field screening results, and laboratory analytical results for assessment soil samples SS01 through SS05, delineation and excavation activities were warranted.

EXCAVATION AND DELINEATION ACTIVITIES

Between January 18, 2023, and May 8, 2023, Ensolum personnel were at the Site to oversee excavation activities based on visible staining in the release area and laboratory analytical results for the assessment soil samples SS01 through SS05. Excavation activities were performed using a backhoe and transport vehicles. To direct excavation activities, soil was field screened for VOCs and chloride using a PID and chloride Hach® chloride QuanTab® test strips, respectively. Field screening results were declining with excavation depth, as expected, until a depth of approximately 3 feet bgs. At a 3 feet bgs, field screening results increased and there were visible indications of a historical pit on the reclaimed Phillips Petroleum well pad (API 30-025-27337). Upon encountering the historical pit, vertical excavation was halted. The excavation proceeded laterally within the release extent until field screening results indicated that excavation sidewalls were compliant with the Site Closure Criteria.

Following lateral excavation of the impacted soil, 5-point composite soil samples were collected every 200 square feet from the sidewalls of the excavation. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples SW01 through SW04 were collected from the sidewalls of the excavation at depths ranging from the ground surface to 3 feet bgs. The excavation extent and soil sample locations were mapped utilizing a handheld GPS and are presented on Figure 2. Photographic documentation was completed during the excavation activities. A photographic log is included in Appendix C. The soil samples were collected, handled, and analyzed as described above.

The excavation measured approximately 5,000 square feet in areal extent. A total of approximately 600 cubic yards of impacted soil was excavated, transported, and properly disposed at R360 Environmental Solutions in Hobbs, New Mexico.

On June 16, 2023, Ensolum personnel returned to the Site to complete vertical delineation of the historical pit encountered in the floor of the open excavation. Potholes PH01 and PH02 were advanced via track mounted backhoe within the 3-foot deep excavation to depths of 11 feet and 7 feet bgs, respectively. Soil from the potholes was field screened at depths ranging from 4 feet to 11 feet bgs using a PID and chloride Hach® chloride QuanTab® test strips. Field screening results indicated elevated TPH and/or chloride concentrations in pothole PH01 at depths ranging from 4 feet to 10 feet bgs and in pothole PH02 at depths ranging from 4 feet to 6 feet bgs. Two delineation samples were submitted for laboratory analysis from each pothole (PH01A/PH01G and PH02A/PH02D) from depths ranging from 4 feet to 10 feet bgs. Field screening results and observations from the potholes were documented on lithologic/soil sampling logs, which are included in Appendix C. The pothole locations are presented on Figure 2.

Laboratory analytical results for excavation sidewall samples SW01 through SW04 indicated all COC concentrations were compliant with the Site Closure Criteria. Laboratory analytical results for pothole delineation samples PH01A and PH02A, collected at a depth of 4 feet bgs, indicated that TPH and/or chloride concentrations exceeded the Site Closure Criteria within the historical pit. Laboratory analytical results for pothole delineation samples PH01G and PH02D, collected at depths of 10 feet and 7 feet bgs, respectively, indicated all COC concentrations were compliant with the Site Closure Criteria and provided vertical delineation of impacted soil within the historical pit. The laboratory analytical results are summarized on the attached Table 1 and the complete laboratory analytical reports are included in Appendix D.

Maverick Permian, LLC
Remediation Work Plan
EVGSAU 2437-001

PROPOSED REMEDIATION WORK PLAN

Maverick excavated approximately 600 cubic yards of impacted soil associated with the January 10, 2023, flow line release. However, historical impacts associated with a buried historical pit on the reclaimed Phillips Petroleum well pad were encountered in the floor of the excavation. Analytical results from the delineation soil sampling indicated soil containing elevated TPH and/or chloride concentrations is present across the 5,000 square foot excavation area and extends from a depth of 3 feet bgs to a maximum depth of 10 feet bgs. The impacted soil below 3 feet bgs is associated with a historical pit containing large pieces of concrete and has a discernable visible difference between the recent release and historical impacts (photos 3 and 4). Maverick is not responsible for remediation of historical impacts on another Operators well pad; however, in order to be protective of the environment, Maverick proposes excavation of the top four feet of soil within the release footprint and installation of a liner in the floor of the open excavation to mitigate further impacts to the subsurface.

Maverick requests approval to complete the following remediation activities:

- Removal of an additional 1-foot of impacted soil from the floor of the excavation, resulting in a final excavation depth of 4 feet bgs.
- An additional estimated 185 cubic yards of impacted soil will be excavated and disposed of at a licensed disposal facility.
- Upon completion of excavation activities, a 20-mil impermeable liner will be installed over the historical pit to mitigate further impacts to the subsurface. The liner will be installed at 4 feet bgs within the open excavation.
- The excavation will be backfilled and recontoured to match pre-existing conditions. The disturbed pasture will be re-seeded with an approved seed mixture. A Reclamation Plan for the disturbed pasture area is included in Appendix F for NMSLO review.

Maverick will complete the excavation and liner installation activities within 90 days of the date of approval of this *Work Plan* by the NMOCD. NMOCD Notifications are included in Appendix G and the Form C-141 is included in Appendix H.

QUESTIONS, Page 2

Action 315196

QUESTIONS (continued)

Operator: Maverick Permian LLC 1000 Main Street, Suite 2900 Houston, TX 77002	OGRID:
	331199
	Action Number:
	315196
Action Type:	
[C-141] Reclamation Report C-141 (C-141-v-Reclamation)	

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Aimee Cole Email: acole@ensolum.com Date: 02/16/2024

QUESTIONS, Page 3

Action 315196

QUESTIONS (continued)

Operator: Maverick Permian LLC 1000 Main Street, Suite 2900 Houston, TX 77002	OGRID:
	331199
	Action Number:
	315196
Action Type:	
[C-141] Reclamation Report C-141 (C-141-v-Reclamation)	

QUESTIONS**Site Characterization**

Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 51 and 75 (ft.)
What method was used to determine the depth to ground water	U.S. Geological Survey
Did this release impact groundwater or surface water	No
What is the minimum distance, between the closest lateral extents of the release and the following surface areas:	
A continuously flowing watercourse or any other significant watercourse	Between 500 and 1000 (ft.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Between 500 and 1000 (ft.)
An occupied permanent residence, school, hospital, institution, or church	Between 1 and 5 (mi.)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes	Between 500 and 1000 (ft.)
Any other fresh water well or spring	Between 500 and 1000 (ft.)
Incorporated municipal boundaries or a defined municipal fresh water well field	Between 1 and 5 (mi.)
A wetland	Between 500 and 1000 (ft.)
A subsurface mine	Between 1 and 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	Low
A 100-year floodplain	Greater than 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	Yes

Remediation Plan

Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

Requesting a remediation plan approval with this submission	Yes
Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No

Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)

Chloride	(EPA 300.0 or SM4500 Cl B)	1800
TPH (GRO+DRO+MRO)	(EPA SW-846 Method 8015M)	71.4
GRO+DRO	(EPA SW-846 Method 8015M)	60
BTEX	(EPA SW-846 Method 8021B or 8260B)	0
Benzene	(EPA SW-846 Method 8021B or 8260B)	0

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	01/12/2024
On what date will (or did) the final sampling or liner inspection occur	01/17/2024
On what date will (or was) the remediation complete(d)	01/22/2024
What is the estimated surface area (in square feet) that will be reclaimed	5500
What is the estimated volume (in cubic yards) that will be reclaimed	830
What is the estimated surface area (in square feet) that will be remediated	5500
What is the estimated volume (in cubic yards) that will be remediated	830

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

QUESTIONS (continued)

Operator: Maverick Permian LLC 1000 Main Street, Suite 2900 Houston, TX 77002	OGRID:	331199
	Action Number:	315196
	Action Type:	[C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS**Remediation Plan (continued)**

Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

This remediation will (or is expected to) utilize the following processes to remediate / reduce contaminants:

(Select all answers below that apply.)

(Ex Situ) Excavation and off-site disposal (i.e. dig and haul, hydrovac, etc.)	Yes
Which OCD approved facility will be used for off-site disposal	R360 Artesia LLC LANDFARM [FEEM0112340644]
OR which OCD approved well (API) will be used for off-site disposal	Not answered.
OR is the off-site disposal site, to be used, out-of-state	Not answered.
OR is the off-site disposal site, to be used, an NMED facility	Not answered.
(Ex Situ) Excavation and on-site remediation (i.e. On-Site Land Farms)	No
(In Situ) Soil Vapor Extraction	No
(In Situ) Chemical processing (i.e. Soil Shredding, Potassium Permanganate, etc.)	No
(In Situ) Biological processing (i.e. Microbes / Fertilizer, etc.)	No
(In Situ) Physical processing (i.e. Soil Washing, Gypsum, Disking, etc.)	No
Ground Water Abatement pursuant to 19.15.30 NMAC	No
OTHER (Non-listed remedial process)	No

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Aimee Cole Email: acole@ensolum.com Date: 02/16/2024

QUESTIONS, Page 6

Action 315196

QUESTIONS (continued)

Operator: Maverick Permian LLC 1000 Main Street, Suite 2900 Houston, TX 77002	OGRID:	331199
	Action Number:	315196
	Action Type:	[C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Sampling Event Information	
Last sampling notification (C-141N) recorded	303547
Sampling date pursuant to Subparagraph (a) of Paragraph (1) of Subsection D of 19.15.29.12 NMAC	01/17/2024
What was the (estimated) number of samples that were to be gathered	3
What was the sampling surface area in square feet	500

Remediation Closure Request

Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.

Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	5500
What was the total volume (cubic yards) remediated	830
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	5500
What was the total volume (in cubic yards) reclaimed	830
Summarize any additional remediation activities not included by answers (above)	A clay liner was installed in the floor of the 4' deep excavation prior to backfilling.

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

QUESTIONS, Page 7

Action 315196

QUESTIONS (continued)

Operator: Maverick Permian LLC 1000 Main Street, Suite 2900 Houston, TX 77002	OGRID:	331199
	Action Number:	315196
	Action Type:	[C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS**Reclamation Report**

Only answer the questions in this group if all reclamation steps have been completed.

Requesting a reclamation approval with this submission	Yes
What was the total reclamation surface area (in square feet) for this site	5500
What was the total volume of replacement material (in cubic yards) for this site	800

Per Paragraph (1) of Subsection D of 19.15.29.13 NMAC the reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

Is the soil top layer complete and is it suitable material to establish vegetation	Yes
On what (estimated) date will (or was) the reseedling commence(d)	01/23/2024

Summarize any additional reclamation activities not included by answers (above)	The excavation was backfilled and seeded with an NMSLO approved seed mix, as detailed in the Remediation Work Plan for this site. Photographs of the backfilled excavation are included in Appendix D. Vegetation monitoring will be completed, at a minimum, on an annual basis.
---	---

The responsible party must attach information demonstrating they have complied with all applicable reclamation requirements and any conditions or directives of the OCD. This demonstration should be in the form of attachments (in .pdf format) including a scaled site map, any proposed reseedling plans or relevant field notes, photographs of reclaimed area, and a narrative of the reclamation activities. Refer to 19.15.29.13 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
