New Mexico Oil Conservation Division 1220 South St. Francis Drive Santa Fe, New Mexico 87505

Re: Deferral Request Report Addendum Charlie Sweeney Fed TB

Incident Number nAPP2332849245

**Eddy County, New Mexico** 

To Whom it May Concern:

Ensolum, LLC (Ensolum), on behalf of Matador Production Company (Matador), has prepared this *Deferral Request Report Addendum (DRRA)* to document excavation and soil sampling activities at the Charlie Sweeney Fed Tank Battery (TB; Site). The purpose of the Site assessment and soil sampling activities was to address impacts to soil following a release of produced water at the Site. Based on the excavation activities and analytical results from the soil sampling events, Matador is submitting this *DRRA*, describing remediation and confirmation sampling activities that have been completed and requesting deferral for Incident Number nAPP2332849245 until the pad is well is plugged and abandoned or the Site is reclaimed.

Ensolum submitted a *Closure Request Report* (CRR) on February 22, 2024, to the New Mexico Oil Conservation Division (NMOCD); however, the CRR was denied for the following reasons:

• Remediation closure denied. OCD will accept the background chloride limit of 1,328 mg/kg. Continue remediating the open excavation to these standards and submit updated remediation closure report to the OCD by 7/16/24.

Ensolum submitted a Deferral Request Report (DRR) to the NMOCD on July 16, 2024, that addressed concerns regarding excavation floor samples with chloride concentrations exceeding 1,328 milligrams per kilogram (mg/kg); however, the DRR was denied for the following reasons:

• Deferral denied. Matador still needs to collect sidewall samples from the excavations at FS03, FS04, FS06, FS07. Sidewall samples should be collected during every excavation to ensure the boundaries of the release are defined. Remediation on an active site can be deferred in areas immediately under or around production equipment such as production tanks, wellheads, and pipelines where remediation could cause a major facility deconstruction so long as the contamination is fully delineated and does not cause an imminent risk to human health, the environment, or ground water. The area of requested deferral has not been horizontally delineated to the east or west of it. All requested samples may be tested for Chloride only. Resubmit deferral request to the OCD by 8/19/2024.

This *DRRA* addresses NMOCD's concerns regarding excavation floor samples with chloride concentrations exceeding 1,328 milligrams per kilogram (mg/kg) and addresses additional sidewall soil sampling in confirmation sample areas FS03, FS04, FS06, and FS07.

Ensolum, LLC | Environmental, Engineering & Hydrogeologic Consultants 3122 National Parks Highway | Carlsbad, NM 88220 | ensolum.com

#### SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in in Unit P, Section 31, Township 23 South, Range 28 East, in Eddy County, New Mexico (32.254637°, -104.119618°) and is associated with oil and gas exploration and production operations on private land.

On November 24, 2023, a seal on a saltwater disposal well (SWD) pump broke, resulting in the release of approximately 67 barrels (bbls) of produced water on pad. A vacuum truck was dispatched to the Site upon discovery of the release, and 35 bbls of produced water were recovered. Matador submitted a Release Notification Form C-141 (Form C-141) to the NMOCD on September 20, 2023. The release was assigned Incident Number nAPP2332849245. The Form C-141 for this incident can be referenced using the NMOCD Portal.

#### SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29 (19.15.29) of the New Mexico Administrative Code (NMAC). Results from the characterization desktop review are presented on page 3 of the Form C-141, Site Assessment/Characterization.

The closest permitted groundwater well with depth to groundwater data is New Mexico Office of the State Engineer (NMOSE) well C 04037 POD 1, with a depth to water measurement of 60 feet below ground surface (bgs); the groundwater well is located approximately 0.54 miles northwest of the Site. All wells used for depth to groundwater determination are depicted on Figure 1 and the referenced well log and record is included in Appendix A.

The closest continuously flowing or significant watercourse to the Site is an intermittent dry wash, located approximately 833 feet southeast of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is in a designated high potential karst zone. Potential Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

Benzene: 10 mg/kg

Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg

Total petroleum hydrocarbons (TPH): 100 mg/kg

Chloride: 600 mg/kg

NMOCD had approved a background chloride concentration limit of 1,328 mg/kg for excavation floor samples collected at the Site.

### SITE ASSESSMENT ACTIVITIES

On November 27, 2023, Site assessment activities were conducted to evaluate the release extent based on information provided on the Form C-141 and visual observations. Five preliminary assessment soil samples (SS01 through SS05) were collected at ground surface around the release extent to assess the lateral extent of the spill area. On December 6, 2023, two potholes (PH01 and PH02) were advanced via backhoe within the release extent to assess the vertical extent of soil. Potholes PH01 and PH02

were advanced to a depth of 2 feet bgs. On January 25, 2024, one additional pothole (PH03) was advanced via backhoe to a depth of 10 feet bgs, and on January 30, 2024, two boreholes (BH01 and BH02) were advanced via hand auger to depths of 9 feet and 6 feet bgs, respectively, within the release extent. The purpose of the vertical potholes and borings was to assess naturally occurring chloride concentrations in the vicinity of the release area. The preliminary assessment soil samples were field screened for TPH using a PetroFLAG® soil analyzer system and chloride using Mohr method titration. The release extent and preliminary soil sample locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 2. Photographic documentation was collected, and a photographic log is included in Appendix B.

All soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Envirotech Analytical Laboratory (Envirotech) in Farmington, New Mexico, for analysis of the following chemicals of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0. In addition, soil samples from BH01, BH02, and PH03 were analyzed for sulfate concentration.

#### LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for preliminary assessment soil samples (SS01 through SS05) indicated all COC concentrations were in compliance with the Site Closure Criteria at ground surface. Laboratory analytical results from potholes PH01 and PH02 indicated the presence of elevated chloride concentrations at the ground surface. Samples collected from 1 foot and 2 feet bgs in those locations did not contain elevated chloride.

Chloride concentrations detected in soil samples collected at depths of 3 feet bgs and greater from BH01, BH02, and PH03 exceeded the Site Closure Criteria. Laboratory analytical results for preliminary assessment soil samples are summarized in Table 1. Based on the vertical distribution of chloride concentrations observed, it was determined that additional delineation sampling to investigate naturally occurring chloride concentrations was warranted.

#### **BACKGROUND SOIL SAMPLING**

On January 31, 2024, Ensolum personnel returned to the Site to conduct additional soil sampling around the Site to assess for the presence or absence of naturally occurring chloride in undisturbed soil horizons. A total of six background samples (BG01 through BG06) were collected in areas that did not appear to be disturbed by oil and gas operations and at depths ranging from ground surface to 10 feet bgs (see Figure 3). The soil samples were handled and analyzed as previously described. Field screening results and lithologic observations were logged on lithologic soil sampling logs, which are included in Appendix C.

#### LABORATORY ANALYTICAL RESULTS

Laboratory analytical results indicated the presence of naturally occurring chloride concentrations in soil exceeding 600 parts per million (ppm) (also measured as mg/kg) in four out of the six undisturbed areas, with a maximum chloride concentration of 11,800 mg/kg detected at BG03. When detected, the elevated concentrations generally occurred between ground surface and approximately 3 feet bgs.

Sulfate concentrations in all samples were generally elevated. Concentrations ranged from 275 mg/kg in BG02 to 26,100 mg/kg in BG06.

Laboratory analytical results are summarized in Table 2 and the laboratory analytical reports and chainof-custody documentation are presented in Appendix D. Notifications of sampling events are presented in Appendix E.

#### REGIONAL AND SITE-SPECIFIC NATURALLY OCCURRING CHLORIDE

According to the Geologic Map of the Otis 7.5-minute Quadrangle (Pederson and Dehler, October 2004), the Site is within the following formations/alluvium:

**Prlu-Permian Rustler Formation, lower, undifferentiated (Ochoan)** – Described as irregular masses of gypsum, dolomite, and salt in large blocks scattered on surface and outcrops with chaotic bedding orientations. Unit may include blocks of strata from the underlying Salado Formation. Thickness unknown.

Qaes-alluvial and eolian deposits (Pleistocene (?) to Holocene) – Described as brown silty clay to silt to sand, well-sorted, subangular to subrounded, grains composed of 70 percent (%) quartz and 30% carbonate and chert. Weak soil development in upper 1.25 meters: upper 15 centimeters of soil is massive silty clay to clayey silt, brown, slightly plastic, bioturbated, effervesces strongly, local organic film with granular soil structure; gypsiferous and calcareous concretions decrease in abundance downward to 40 centimeters; and prismatic structure extends down to 1.25 meters. Unit locally weathers into badlands and exhibits piping. Common veneer on nearly all Quaternary deposits. Thickness ≤10 m.

Regionally, this area consists of gypsum and salt deposits at or near ground surface. Gypsum (hydrated calcium sulfate ( $CaSO_4$ - $2H_2O$ )) and salt (sodium chloride (NaCl) and others) are prone to dissolve with precipitation events and naturally settle through pore spaces into clay with the electron affinity or areas where the pore spaces do not allow for gravity movement. The variability of the salt throughout the area is correlated with the heterogeneity of the surface make-up, limiting correlation of salt by depth and/or specific lithology.

In addition to the regional geology, this area has been documented to have elevated chloride concentrations predating this release. Previous background sampling activities conducted by Souder, Miller & Associates (SMA) on behalf of Matador were completed at seven locations prior to the assembly of production equipment at Sites in the vicinity. These locations are located around the Loving/Malaga area and indicate chloride concentrations exceed 600 ppm. Two of the background sites tested, Warren #203H and B Banker #221H, are near the Site and identify chloride concentrations comparable to those found in the soil samples presented in this report. Appendix F includes the NMOCD-approved reports that document the elevated chloride concentrations common in the area.

Through the advancement of boreholes BH01 and BH02, potholes PH01 through PH03, and background borings BG01 through BG06, Ensolum observed surface and subsurface soil/rock consistent with the regional geology. Within the well pad itself, the lithology appears to consist of imported caliche at the ground surface to approximately 2.5 feet bgs (likely based on the natural topographic terrain prior to well pad construction) with a poorly graded silty sand, poorly graded sand, or gypsum present beneath the caliche. Inconsistency with lithology based on depth is consistent with the regional geology. Outside of the well pad, Ensolum observed gypsum at the ground surface in background samples BG01 and BG03 through BG06. Background sample BG02 consisted of a poorly graded silty sand from the ground surface and transitioned into gypsum at 3.5 feet bgs.

The presence of elevated sulfate in background samples BG01 through BG06, as well as boreholes BH01 and BH02 and pothole PH01, supports the presence of gypsum. At the concentrations observed,

it is likely that naturally occurring chloride is present at varying concentrations, including at concentrations greater than 600 ppm, as observed in laboratory analytical results.

When completing delineation activities related to the release, observations by Ensolum appeared to indicate the release was contained within the caliche pad. Beneath the constructed pad, the heterogeneous lithology similar to the lithology already documented in the region was observed. As such, Ensolum proposes a site-specific background concentration for chloride. Using background sample results, chloride concentrations ranged from non-detect to 11,800 mg/kg, with an average concentration detected of 1,251 mg/kg. For samples collected within the observed gypsum layer, the average concentration of chloride was 2,902 mg/kg. Ensolum proposed the use of this value as a site-specific remediation standard at approximately 1-foot to 3 feet bgs on Site.

#### **EXCAVATION SOIL SAMPLING ACTIVITIES**

Beginning on January 23, 2024, Ensolum personnel were onsite to oversee the excavation and removal of impacted soil at the Site. Excavation activities were performed using a hydro-vacuum, backhoe, hand tools, and transport vehicles. The excavation occurred on-pad within the mapped release extent. To direct excavation activities, soil was screened for chloride using the Mohr Method titration.

The Site excavation area measured approximately 6,647 square feet. A total of approximately 680 cubic yards of soil was removed. The soil was transported and properly disposed of at the R360 Hobbs Facility in New Mexico.

Following removal of impacted soil, 5-point composite soil samples were collected at least every 200 square feet from the floor of the excavation and every 200 feet from the sidewalls of the excavation. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Excavation floor soil samples (FS01 through FS33) were collected at depths ranging from 1-foot to 3 feet bgs and excavation sidewall soil samples (SW01 through SW04) were collected at depths ranging from the ground surface to 2 feet bgs. The excavation extent and excavation soil sample locations are presented on Figure 4.

Ensolum personnel returned to the Site on June 20, 2024, to advance composite floor samples that exceeded the approved background chloride limit. Excavation floor soil samples FS03 and FS04 were advanced via hand tools to a depth of 4 feet bgs and excavation floor samples FS06 through FS07 were advanced to a depth of 14 feet and 12 feet bgs, respectively, via trackhoe. Excavation floor sample locations FS03 and FS04 could not be advanced deeper than 4 feet bgs due to the proximity of the tank containment and associated pipping and equipment. Approximately 120 cubic yards of additional soil were removed from the release area. The soil was transported and properly disposed of at the R360 Hobbs Facility in New Mexico.

Ensolum personnel returned to the Site on September 3, 2024, to collect sidewalls on the west, east, and south sides of confirmation sample areas FS03 and FS04. Sidewall soil sample SW05 collected at depths ranging from ground surface to 4 feet bgs laterally and vertically defines the west side of the Area of Requested Deferral (FS03 and FS04) and sidewall soil sample SW06 collected at depths ranging from ground surface to 4 feet bgs laterally defines the east side. The north side of the Area of Requested Deferral (FS03 and FS04) is laterally and vertically defined by confirmation floor soil sample FS02@2 ft bgs. Sidewall sample SW07, collected at depths ranging from 4 feet bgs to 14 feet bgs, is located directly beneath the catwalk stairs and north of confirmation sample area's FS05@ 2 ft bgs and FS06@14 ft bgs. The catwalk stairs and associated production equipment are preventing the removal of chloride containing soil and therefore SW07 is included in the Area of Requested Deferral.

Confirmation sidewall soil samples SW08 and SW09 collected at depths ranging from ground surface to 14 feet and 12 feet bgs, respectively, laterally and vertically define confirmation soil sample areas FS06@2 ft bgs and FS07@2 ft bgs on the west and east sides of the excavation extent. Confirmation sidewall soil samples SW10 through SW12 laterally and vertically define confirmation sample areas FS05@2 ft bgs, FS06@2 ft bgs, FS07@2 ft bgs, and FS08@2 ft bgs on the south side of the excavation extent.

#### LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for excavation floor samples and excavation sidewall samples were all in compliance with the Site Closure Criteria and reclamation requirement and/or the proposed Site-specific background concentration with the exception of confirmation floor samples FS03 and FS04 collected at a depth of 4 feet bgs. Laboratory analytical results for confirmation sidewall soil samples (SW05 through SW12) were all in compliance with the proposed Site-specific background concentration with the exception of confirmation sidewall soil sample SW07 collected at a depth ranging from 4 feet bgs to 14 feet bgs. Laboratory analytical results are summarized in Tables 3 and 4 and laboratory analytical reports are included as Appendix D.

#### **DEFERRAL REQUEST**

Matador is requesting deferral of final remediation due to the presence of active production equipment (tank containment, transfer pumps, process piping, and the stairs to the catwalk), which prevent the full excavation of impacted soil in confirmation sample locations FS03, FS04, and SW07. The estimated area of remaining impacted soil measures approximately 483 square feet, and assuming a depth of up to 14 feet bgs based on confirmation floor sample FS06@14 ft bgs, a total of approximately 250 cubic yards of impacted soil remains in place. The deferral area and delineation soil samples are depicted on Figure 5.

Impacted soil is limited to the area around active production equipment, where remediation would require a major facility deconstruction. The release extent has been laterally defined by delineation soil samples (SS01 through SS05) at ground surface and vertically defined by delineation pothole samples (PH01 and PH02 at 2 feet bgs, PH03 at 10 feet bgs, BH01 at 9 feet bgs, BH02 at 6 feet bgs, and borehole sample BH03 at 11 feet bgs) and by confirmation floor sample FS06@14 ft bgs.

Matador does not believe deferment will result in imminent risk to human health, the environment, or groundwater. Depth to groundwater was determined to be 60 feet bgs, and all accessible impacted soil was removed to the Maximum Extent Possible (MEP) during excavation activities. Matador requests deferral of final remediation for Incident Number nAPP2332849245 until final reclamation of the well pad or major construction, whichever comes first.

If you have any questions or comments, please contact Ms. Ashley Giovengo at (575) 988-0055 or agiovengo@ensolum.com.

Sincerely, **Ensolum**, **LLC**

#### Notes:

bgs: below ground surface mg/kg: milligrams per kilogram

NMOCD: New Mexico Oil Conservation Division

NMAC: New Mexico Administrative Code

Grey text represents samples that have been excavated

"<": Laboratory Analytical result is less than reporting limit

Concentrations in **bold** exceed the NMOCD Table I Closure Criteria or reclamation standard where applicable.

GRO: Gasoline Range Organics DRO: Diesel Range Organics ORO: Oil Range Organics

TPH: Total Petroleum Hydrocarbon

BTEX: Benzene, Toluene, Ethylbenzene, and Xylenes

NA: Not Analyzed

<sup>\*</sup> Naturally occuring chloride level approved by NMOCD

#### Greetings:

The well driller's record for the above numbered well has been received in this office indicating your well has been completed.

Your permit was granted with the condition that a meter(s) be installed and meter readings submitted to this office.

Per Condition 5B, please advise this office within 30 days, on the attached form, of the make, model, serial number, date of installation, and initial reading of the meter(s) prior to appropriation of the water.

If you have any questions, please feel free to contact us.

Yolanda Mendiola (575) 622 - 6521

Enclosure

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 11/29/2023 8:30:00AM, under the Project Name: Charlie Sweeney Federal Tank Battery.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Federal Tank Battery apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

## **Definitions and Notes**

| Matador Resources, LLC.      | Project Name:    | Charlie Sweeney Federal Tank Battery |                |
|------------------------------|------------------|--------------------------------------|----------------|
| 5400 LBJ Freeway, Suite 1500 | Project Number:  | 23052-0001                           | Reported:      |
| Dallas TX, 75240             | Project Manager: | Ashley Giovengo                      | 12/05/23 16:18 |

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

RPD Relative Percent Difference

DNI Did Not Ignite

DNR Did not react with the addition of acid or base.

Note (1): Methods marked with \*\* are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Date Received: 12/8/2023 1:00:00PM

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 12/8/2023 1:00:00PM, under the Project Name: Charlie Sweeney Federal Tank Battery.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Federal Tank Battery apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 1/26/2024 6:30:00AM, under the Project Name: Charlie Sweeney TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 1/29/2024 9:23:00AM, under the Project Name: Charlie Sweeney TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Date Received: 1/27/2024 8:30:00AM

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 1/27/2024 8:30:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

## **Definitions and Notes**

| l | Matador Resources, LLC.      | Project Name:    | Charlie Sweeney Fed TB |                |
|---|------------------------------|------------------|------------------------|----------------|
| l | 5400 LBJ Freeway, Suite 1500 | Project Number:  | 23052-0001             | Reported:      |
| ١ | Dallas TX, 75240             | Project Manager: | Ashley Giovengo        | 02/14/24 16:55 |

M4 Matrix spike recovery value is suspect since the analyte concentration in the sample is disproportionate to the spike level. The

associated LCS spike recovery was acceptable.

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

RPD Relative Percent Difference

DNI Did Not Ignite

DNR Did not react with the addition of acid or base.

Note (1): Methods marked with \*\* are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/1/2024 8:46:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

| 2. Does the number of samples per sampling site location match the COC 4. Was the COC complete, i.e., signatures, datestimes, requested analyses? 5. Were all samples received within holding time? 6. Note changis, such as play which should be conducted in the field, i.e. 15 minute hold time, are not included in this discussion.  Sample Furn Around Time CTAT 7. Did the COC indicate standard TAT, or Expedited TAT? 8. If yes, was cooler received? 7. Was a sample cooler received? 8. If yes, was cooler received? 9. Was the sample sorder received in good condition? 9. Was the sample sorder received in good condition? 9. Was the sample sorder received in good condition? 10. Were custody/security seals present? 10. Were custody/security seals intact? 11. If yes, were custody/security seals intact? 12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°±2°C Note: Thermal preservation is not required, if samples are received wil 15 minutes of sampling 13. If no visible ice, record the temperature. Actual sample temperature: 4°C 15. Are VOC samples collected in VOA Vials? 16. Is the head space leas than 6-8 mm (pea sized or less)? 17. Was a trip blank (TB) included for VOC analyses? 19. Is the appropriate volume/weight or number of sample containers collected? 19. Ower field sample labels filled out with the minimum information:  Sample Preservation 21. Does the COC or field labels indicate the samples were preserved? 22. Are sample(s) correctly preserved? 23. Are sample shape have more than one phase, i.e., multiphase? 24. Is lab filteration required and or requested for dissolved metals? 25. Are sample have more than one phase, i.e., multiphase? 26. Lose the sample have more than one phase, i.e., multiphase? 27. If yes, does the COC specify which phase(s) is to be analyzed? 28. Are samples exquired to get sent to a subcontract laboratory? 29. Was a subcontract Laboratory specified by the client and if so who?  No                                                                                          | Chain of     | Custody (COC)                                                                 |                    |          |                     |                |                |
| 3. Were samples dropped off by client or earnier? 4. Was the COC complete, i.e., signatures, distributes, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 6. Did the COC indicate standard TAT, or Expedited TAT? 7. Was a sample condear received? 7. Was a sample conder received? 7. Was a sample conder received? 8. Were controlled by the samples present? 8. Were controlled by the samples of sample time? 9. Was the sample (s) received intact, i.e., not broken? 9. Was the sample (s) received intact, i.e., not broken? 9. Was the sample coil or ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°22°C. 9. Note the sample of samples are received will to minute of sampling 13. If no visible ice, record the temperature. Actual sample temperature: 4°C.  8. Sample Container. 14. Are aqueous VOC samples persent? 15. Are VOC samples collected in VOA Visils? 16. Is the head space less than 6-8 mm (pea sized or less)? 17. Was a trip blank (IB) included for VOC analyses? 18. Are non-VOC samples collected in the correct containers? 19. Is the paperprint volume-weight or number of sample containers collecte? 29. Less the sample have more than one phase, i.e., multiphase? 20. Were fall sample labels filled out with the minimum information: 21. Does the COC or field labels indicate the samples were preserved? 22. Are sampled, overethy preserved? 23. Less the COC or field labels indicate the    | 1. Does t    | he sample ID match the COC?                                                   |                    | Yes      |                     |                |                |
| 4. Was the COC complete, i.e., signatures, dates/times, requested analyses?  5. Were all samples received within holding time?  Note analysis, and he pff which should be conducted in the field, i.e., 15 minute hold time, are not included in this discussion.  Sample Term Around Time (TXI)  5. Did the COC indicates standard TAT, or Expedited TAT?  7. Was a sample cooler received?  8. If yes, was cooler received in good condition?  9. Was the sample yer ceived mice, i.e., not broken?  10. Were custody/security seals present?  11. If yes, were custody/security seals intact?  12. Was the sample received on it is of yes, the recorded temp is 4% i.e., 6*22°C  Note: Thermal preservation is not required, if samples are received wis 15 minutes of sampling.  13. If no visible ice, record the temperature. Actual sample temperature: 4°C  Sample Container.  14. Are aqueous VOC samples present?  15. Are VOC samples collected in VOA Vials?  16. Is the head space less than 6-8 mm (pen sized or less)?  17. Was a trib bank (T8) included for VOC analyses?  18. Are non-VOC samples collected in the correct containers?  19. Is the appropriate volume/veight or number of sample containers collected?  19. Is the appropriate volume/veight or number of sample containers collected?  19. Date Time Collected?  10. Does the COC or field labels indicate the samples were preserved?  No  Sample Preservation.  21. Does the COC or field labels indicate the samples were preserved?  No  Multiphase Sample Marrix  22. Are sample(s) correctly preserved?  No  Multiphase Sample Marrix  23. Are samples copiured to get sent to a subcontract laboratory?  24. Sa lab filteration required and/or requested for dissolved metals?  No  Subcontract Laboratory  25. Are sampled sequence of the contract container of the contract Laboratory of the contract    | 2. Does t    | he number of samples per sampling site location ma                            | tch the COC        | Yes      |                     |                |                |
| 5. Were all samples received within holding time? Note Analysis, sales a pit which should be conducted in the field, i.e, 15 minute hold time, are not included in this dissuession.  Samule Turn Around Time (TAT) 6. Did the COol indicate standard TAT, or Expedited TAT?  Yes Sample Cooler 7. Was a sample cooler received? 8. If yes, was cooler received in good condition? 9. Was the sample (s) received intact, i.e., not broken? 10. Were custody/security scales intact? 11. If yes, were custody/security scales intact? 12. Was the sample received on itse? If yes, the recorded temp is 4°C, i.e., 6°±2°C Note: Themal preservation is not required if, samples are received win 15 minutes of sampling 13. If no visible i.e., record the temperature: 4°C Sample Container 14. Are auguous VOC samples present? 16. Is the head space less than 6-8 mm (pea sized or less)? 17. Was a trip blank (TB) included for VOC analyses? 18. Are non-VOC samples collected in VOA Vials? 19. Is the papropriate volume/weight or number of sample containers collected? 20. Were field sample labels filled out with the minimum information: Sample D'P Date/Time Collected? Collectors name? 21. Does the COC or field labels indicate the samples were preserved? 22. Are samplely-go orrectly preserved? 33. Na 34. All filteration required and/or requested for dissolved metals? 34. Is all filteration required and/or requested for dissolved metals? 35. Na 36. All filteration required and/or requested for dissolved metals? 36. Does the sample have more than one phase, i.e., multiphase? 37. If yes, does the COC specify which phase(s) is to be analyzed? 38. Are samples required to get sent to a subcontract laboratory? 39. Was a subcontract Laboratory, specified by the client and if so who? 39. Was a subcontract Laboratory specified by the client and if so who? 30. Subcontract Lab: NA                                                                                                                                                                                                | 3. Were s    | amples dropped off by client or carrier?                                      |                    | Yes      | Carrier: Courier    |                |                |
| Note: Analysis, such as pill which should be conducted in the field, it., 15 minute hold time, are not included in this discussion.  Sample Lorn Around Time (TAT)  O bid the COC indicat standard TAT, or Expedited TAT?  Yes  Sample Cooler  Nasa sample cooler received?  Ness assample cooler received in good condition?  Ness the sample(s) received intact, i.e., not broken?  Ness the sample(s) received intact, i.e., not broken?  Ness the sample(s) received intact, i.e., not broken?  Ness the sample fevered on ice' If yes, the recorded temp is 4°C, i.e., 6°±2°C  Note: Themal preservation is not required, if samples are received wil 15 minutes of sampling into strain sample from the samples are received wil 15 minutes of sampling  13. If no visible ice, record the temperature. Actual sample temperature: 4°C  Sample Container  14. Are aqueous VOC samples present?  No  15. Are VOC samples collected in VOA Vials?  16. Is the head space less than 6-8 mm (pea sized or less)?  NA  17. Was a trip blank (TB) included for VOC analyses?  NA  18. Are non-VOC samples collected in the correct containers?  Yes  Field Label  20. Were field sample labels filled out with the minimum information:  Sample D'C  Collectors name?  Na  Sam   | 4. Was th    | e COC complete, i.e., signatures, dates/times, reque                          | sted analyses?     | Yes      |                     |                |                |
| Sample Curin Around Time (TAT) 6. Did the COC indicate standard TAT, or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample cooler received in good condition? 8. If yes, was cooler received in good condition? 9. Was the sample (S) received in good condition? 10. Were custody/security seals present? 11. If yes, were custody/security seals intact? 12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°a2°C Now: Thermal preservation is not required, If samples are received wit 15 minutes of sampling 13. If no visible ice, record the temperature. Actual sample temperature: 4°C  Sample Container 14. Are aqueous VOC samples present? 15. Are VOC samples collected in VOA Vials? 16. Is the head space less than 6-8 mm (pen sized or less)? 17. Was a trip blank (TB) included for VOC analyses? 19. Is the aparopriate volume/weight or number of sample containers collected? 19. Sample ID? 10. Were field sample labels filled out with the minimum information: 10. Sample ID? 11. Sample ID? 12. Dares the COC or field labels indicate the samples were preserved? 13. Is lab filteration required and/or requested for dissolved metals? 14. Is a sample (S) correctly preserved? 15. Is lab filteration required and/or requested for dissolved metals? 16. Is the sample was a sample have more than one phase, i.e., multiphase? 17. If yes, does the COC specify which phase(s) is to be analyzed? 18. Are samples required to get sent to a subcontract laboratory? 18. Are samples required to get sent to a subcontract laboratory? 19. Are samples required to get sent to a subcontract laboratory? 20. Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/1/2024 8:00:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

# **Definitions and Notes**

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/1/2024 4:28:00PM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/1/2024 9:34:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

| Chain of Custody (COC)  1. Does the sample ID match the COC? 2. Does the number of samples per sampling site location match the COC yes 3. Were samples dopped of IPs ye into the carrier? 4. Was the COC complete, i.e., signatures, datestimes, requested analyses? 5. Were all sample secretived within boding time? 5. Were all sample secretived within boding time? 6. Bid the COC indicate standard TAT, or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample cooler received? 8. Were sample (so preceived) 8. If yes, was cooler received intect, i.e., not broken? 9. Was the sample (so) received intect, i.e., not broken? 10. Were custody/security seals intate? 11. If yes, were custody/security seals intate? 12. Was the sample received in its or required, if samples are received will 5 minutes of sampling 13. If no visible is, excoult the temperature. Actual sample temperature: \$\frac{1}{2}C\$  8. Sample Cooler. 14. Are aspectos VCC samples collected in VOA Vials? 16. Is the fead space less than 6-8 mm (pea sized or less)? 17. Was a trip black (Tb) included for VCC analyses? 18. Are non-VCC samples collected in the orrect containers? 19. Is the appropriate volume/weight or number of sample comainers collected? 19. Were fleat sample labels filled out with the minimum information: 19. Is the appropriate volume/weight or number of sample comainers collected? 19. Were fleat sample labels filled out with the minimum information: 20. Were fleat sample labels folled out with the minimum information: 21. Does the COC or field labels indicate the samples were preserved? 22. Are samples (or field labels indicate the samples were preserved? 23. Lover fleat sample labels filled out with the minimum information: 24. Label 10. South fleat the samples were preserved? 25. Lover fleat sample labels filled out with the minimum information: 26. Lover the sample have more than one phase, i.e., multiphase? 27. Lover, fleat sample labels filled out with the minimum information: 28. Label filterant required and for requested for dissol |             |                                                           |                  |          |                 |            |                 |                |
| Does the sample ID match the COC?   Yes   2. Does the number of sampling site location match the COC   Yes   2. Does the number of sampling site location match the COC   Yes   2. Wes the COC complete, i.e., signatures, dates/times, requested analyses?   Yes   Note: Analysis, such as pH which should be conducted in the field, i.e. 15 minute hold time, are not included in this discussion.   Yes   Note: Analysis, such as pH which should be conducted in the field, i.e. 15 minute hold time, are not included in this discussion.   Yes   Sample Tour Around Time (TAY)   Sample Tour Around Time (TAY)   Yes   Sample Cooler received?   Yes   Sample Cooler received?   Yes   Sample Cooler received?   Yes      |             |                                                           |                  |          |                 |            |                 |                |
| 2. Does the number of samples per sampling site location match the COC 3. Were samples dropped off by client or carrier? 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 7. Was a sample to Col indicate standard TAT; or Expedited TAT? 7. Did the COC indicate standard TAT; or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample received in good condition? 7. Was a sample received in good to an interpretation of the control   | Chain of    | Custody (COC)                                             |                  |          |                 |            |                 |                |
| 3. Were samples dropped off by client or carrier? 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 6. Did the COC indicate standard TATI, or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample cooler received? 7. Was a sample cooler received in good condition? 7. Was a sample cooler received in good condition? 8. Klyse, was cooler received in good condition? 9. Was the sample sarpresent? 10. Were custody/security seals present? 11. If yes, were custody/security seals present? 12. Was the sample received on less? If yes, the recorded temp is 4°C, i.e., 6°42°C Note Themap preservation is not required, if samples are received will 15 minutes of sampling 13. If no visible ics, record the temperature. Actual sample temperature: 4°C 8 sample Container 14. Are aqueous VOC samples collected in VOA Visils? 15. Are VOC samples collected in VOA Visils? 16. Is the head space less than 6-8 mm (pea sized or less)? 17. Was a trip blank (TB) included for VOC analyses? 18. Are non-VOC samples collected in the correct containers? 19. Is the paperpiate volume/weight or number of sample containers? 20. Were field Label 20. Were field sample labels filled out with the minimum information: 21. Sample Dreserved? 22. Are sample(s) correctly preserved? 23. Less a sample correctly correctly preserved? 24. Is lab filteration required and/or requested for dissolved metals? 25. Loss the sample have more than one phase, i.e., multiphase? 26. Loss the sample have more than one phase, i.e., multiphase? 27. If yes, does the COC specify which phase(s) is to be analyzed? 28. Are samples required to get sent to a subcontract laboratory as subcontract Laboratory specified by the client and if so who? 29. Was a subcontract Laboratory specified by the client and if so who? 29. Was a subcontract Laboratory specified by the client and if so who? 29. Was a subcontract Laboratory specified by the client and if so who   | 1. Does th  | ne sample ID match the COC?                               |                  | Yes      |                 |            |                 |                |
| 3. Were samples dropped off by client or carrier? 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? Note: Analysis, such as pif which should be conducted in the field, i.e., 15 minute hold time, are not included in this discussion.  Samuel Turn Around Time (TAT) 6. Did the COC indicate standard TAT; or Expedited TAT?  Yes  Sample Cooler 7. Was a sample cooler received? 8. If yes, was cooler received in good condition? 9. Was the sample (s) received intact, i.e., not broken? 10. Were custody/security seals present? 11. If yes, were custody/security seals intact? 12. Was the sample received on ise? If yes, the recended temp is 4°C, i.e., 6°2°C Note Themad preservation is not required, if samples are received wil 15 minutes of sampling 13. If no visible ice, record the temperature. Actual sample temperature: 4°C  Sample Container 14. Are angeous VOC samples present? 15. Are VOC samples collected in VOA Vials? 16. Is the head space less than 6-8 mm (pea sized or less)? 17. Was a trip blank (TB) included for VOC analyses? 18. Are non-VOC samples collected in the correct containers? 19. Is the papporpiate volume/weight or number of sample containers collected? 20. Were field sample labels filled out with the minimum information: 21. Sample Treservation 22. Less sample) correctly preserved? 22. Are sample) correctly preserved? 23. Less and Collector in the correct containers or less of the COC or field labels indicate the samples were preserved? 24. Is lab filteration required and/or requested for dissolved metals? 25. Less as a subcontract laboratory. 26. Less are sample have more than one phase, i.e., multiphase? 27. If yes, does the COC specify which phase(s) is to be analyzed? 28. Are samples required to get sent to a subcontract laboratory? 29. Was a subcontract Laboratory specified by the client and if so who? 29. Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/1/2024 8:00:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Walter Hinchman

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

| A land of Custody (COC)  1. Does the sample ID match the COC? 2. Does the number of samples per sampling site location match the COC 3. Does the number of samples per sampling site location match the COC 4. Was the COC complete, i.e. signatures, dates/times, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 6. Were all samples received within holding time? 7. Were all samples received within holding time? 7. Were all samples to the COC indicate standard TAT; or Expedited TAT? 7. We as ample to received intent, i.e., not broken? 7. Was a sample cooler received in good condition? 7. Was a sample cooler received intent, i.e., not broken? 7. Were custody/security seals instard? 7. Was the sample(s) received intent, i.e., not broken? 7. Were custody/security seals instard? 7. Was the sample received nice? If yes, the recorded lump is 4°C, i.e., 6°±2°C 7. Note. Thermal preservation in the required, if animals are received will 5 minutes of sampling 7. If no visible is every different the temperature. 7. Actual sample temperature: 8. Sample Container 8. Are approach XOC samples collected in WOA Vials? 8. Are non-VOC samples collected in the correct containers? 9. Sample Container 19. It was arip blank (TB) included for VOC analyses? 19. It was arip blank (TB) included for VOC analyses? 19. It was a rip blank (TB) included for VOC analyses? 19. It was a rip blank (TB) included for VOC analyses? 10. Were field sample labels filled out with the minimum information: 10. Sample ID? 10. Date Time Collected? 10. Were field sample labels filled out with the minimum information: 11. It was a rip blank (TB) included for requested for dissolved metals? 12. Does the COC of field labels indicate the samples were preserved? 13. It was not possible to the correct containers? 14. It was not possible to the correct containers? 15. Are analyse to or field labels indicate the samples were preserved? 16. It was not possible to the correct containers? 17. We are the bla | Phone:     | (972) 371-5200                                                                 | Date Logged In:   | 02/01/24 | 09:42             |         | Logged In By:    | Alexa Michaels |
| 1. Does the sample ID match the COC?   2. Does the turnibor of samples per sampling site location match the COC   2. Does the turnibor of samples per sampling site location match the COC   3. Were amplisately received from the circle (i.e., signatures, dates/times, requested analyses)   Yes     4. Was the COC complete, i.e., signatures, dates/times, requested analyses   Yes     5. More Analysis, asola as pH which should be conducted in the field, i.e. 15 minus bold time, are not included in this discession.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Email:     | agiovngo@ensolum.com                                                           | Due Date:         | 02/07/24 | 17:00 (4 day TAT) |         |                  |                |
| 2. Does the number of samples per sampling site location match the COC 3. Were samples dropped off by client or carrier? 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 7. Was a sample and Timer TAT1 6. Did the COC indicate standard TAT, or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample cooler received? 7. Was a sample cooler received? 7. Was a sample specified intact, i.e., not broken? 7. Was a sample received in good condition? 7. Was the sample specified intact, i.e., not broken? 7. Was the sample received on iged intact, i.e., not broken? 7. Was the sample received on iged intact, i.e., not broken? 7. Was the sample received on iged if liyes, the recorded temp is 4°C, i.e., 6°=2°C 7. Note: Thermal preservation is not required, if samples are received wit 15 minutes of sampling 7. If no visible ice, record the temperature. 8. Actual sample temperature. 9. Note Stamples collected in VOA Vials? 1.5. Are VOC samples collected in VOA Vials? 1.6. Is the head space less than 6.8 mm (pea sized or less)? 1.7. Was a trip blank (TB) included for VOC analyses? 1.8. Are non-VOC samples collected in the correct containers? 1.8. Are non-VOC samples collected in the correct containers? 1.9. Is the appropriate volume/weight or number of sample containers collected? 1.0. Were field sample labels filled out with the minimum information: 1.0. Sample Preservation 2.1. Does the COC or field labels indicate the samples were preserved? 2. Are sample(s) correctly preserved? 2. Are sample(s) correctly preserved? 3. No  1. Subcontract Laboratory 3. No  1. Subcontract Laboratory 4. No  2. Was a subcontract Laboratory specified by the client and if so who? 3. No  1. Subcontract Laboratory specified by the client and if so who? 3. Subcontract Laboratory specified by the client and if so who? 3. Subcontract Laboratory 4. Was a subcontract Laborat | Chain of   | Custody (COC)                                                                  |                   |          |                   |         |                  |                |
| 2. Does the number of samples per sampling site location match the COC 3. Were samples dropped off by client or carrier? 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 5. Were all samples received within holding time? 7. Was a sample and Timer TAT1 6. Did the COC indicate standard TAT, or Expedited TAT? 7. Was a sample cooler received? 7. Was a sample cooler received? 7. Was a sample cooler received? 7. Was a sample specified intact, i.e., not broken? 7. Was a sample received in good condition? 7. Was the sample specified intact, i.e., not broken? 7. Was the sample received on iged intact, i.e., not broken? 7. Was the sample received on iged intact, i.e., not broken? 7. Was the sample received on iged if liyes, the recorded temp is 4°C, i.e., 6°=2°C 7. Note: Thermal preservation is not required, if samples are received wit 15 minutes of sampling 7. If no visible ice, record the temperature. 8. Actual sample temperature. 9. Note Stamples collected in VOA Vials? 1.5. Are VOC samples collected in VOA Vials? 1.6. Is the head space less than 6.8 mm (pea sized or less)? 1.7. Was a trip blank (TB) included for VOC analyses? 1.8. Are non-VOC samples collected in the correct containers? 1.8. Are non-VOC samples collected in the correct containers? 1.9. Is the appropriate volume/weight or number of sample containers collected? 1.0. Were field sample labels filled out with the minimum information: 1.0. Sample Preservation 2.1. Does the COC or field labels indicate the samples were preserved? 2. Are sample(s) correctly preserved? 2. Are sample(s) correctly preserved? 3. No  1. Subcontract Laboratory 3. No  1. Subcontract Laboratory 4. No  2. Was a subcontract Laboratory specified by the client and if so who? 3. No  1. Subcontract Laboratory specified by the client and if so who? 3. Subcontract Laboratory specified by the client and if so who? 3. Subcontract Laboratory 4. Was a subcontract Laborat | 1. Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 2/2/2024 6:10:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Sample Receipt Checklist (SRC)

Instructions: Please take note of any NO checkmarks. If we receive no response concerning these items within 24 hours of the date of this notice, all the samples will be analyzed as requested. Matador Resources, LLC. F402025 Date Received: 02/02/24 06:10 Work Order ID: Client: Jessica Liesse 02/02/24 08:51 Logged In By: Phone: (972) 371-5200 Date Logged In: 02/08/24 17:00 (4 day TAT) Email: agiovngo@ensolum.com Due Date: Chain of Custody (COC) 1. Does the sample ID match the COC? Yes 2. Does the number of samples per sampling site location match the COC Yes 3. Were samples dropped off by client or carrier? Yes Carrier: Cole Burton Yes 4. Was the COC complete, i.e., signatures, dates/times, requested analyses? 5. Were all samples received within holding time? Yes Note: Analysis, such as pH which should be conducted in the field, Comments/Resolution i.e, 15 minute hold time, are not included in this disucssion. Sample Turn Around Time (TAT) 6. Did the COC indicate standard TAT, or Expedited TAT? Yes Sample Cooler 7. Was a sample cooler received? Yes 8. If yes, was cooler received in good condition? Yes 9. Was the sample(s) received intact, i.e., not broken? Yes 10. Were custody/security seals present? No 11. If yes, were custody/security seals intact? NA 12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°±2°C Yes Note: Thermal preservation is not required, if samples are received w/i 15 minutes of sampling 13. If no visible ice, record the temperature. Actual sample temperature: 4°C Sample Container 14. Are aqueous VOC samples present? No NA 15. Are VOC samples collected in VOA Vials? NA 16. Is the head space less than 6-8 mm (pea sized or less)? 17. Was a trip blank (TB) included for VOC analyses? NA 18. Are non-VOC samples collected in the correct containers? Yes 19. Is the appropriate volume/weight or number of sample containers collected? Yes 20. Were field sample labels filled out with the minimum information: Sample ID? Yes Date/Time Collected? Yes Collectors name? No Sample Preservation 21. Does the COC or field labels indicate the samples were preserved? No 22. Are sample(s) correctly preserved? NA 24. Is lab filteration required and/or requested for dissolved metals? No Multiphase Sample Matrix 26. Does the sample have more than one phase, i.e., multiphase? No 27. If yes, does the COC specify which phase(s) is to be analyzed? NA Subcontract Laboratory 28. Are samples required to get sent to a subcontract laboratory? No 29. Was a subcontract laboratory specified by the client and if so who? NA Subcontract Lab: NA **Client Instruction** 

Signature of client authorizing changes to the COC or sample disposition.

Ashley Giovengo,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 6/25/2024 5:15:00AM, under the Project Name: Charlie Sweeney Fed TB.

The analytical test results summarized in this report with the Project Name: Charlie Sweeney Fed TB apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

#### QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

## **Definitions and Notes**

| Matador Resources, LLC.      | Project Name:    | Charlie Sweeney Fed TB |                |
|------------------------------|------------------|------------------------|----------------|
| 5400 LBJ Freeway, Suite 1500 | Project Number:  | 23003-0002             | Reported:      |
| Dallas TX, 75240             | Project Manager: | Ashley Giovengo        | 06/28/24 11:41 |

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

RPD Relative Percent Difference

DNI Did Not Ignite

DNR Did not react with the addition of acid or base.

Note (1): Methods marked with \*\* are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.
