Introduction

On behalf of Devon Energy Production Company (Devon), New Tech Global Environmental, LLC (NTGE) has prepared this Site Characterization and Remediation Work Plan for submittal to the New Mexico Oil Conservation Division (NMCOD) District 2 Office in Artesia, New Mexico to document site assessment, remedial action activities, and sample analysis results for the release number: nAPP2414124712, & nAPP2427431240 – Right Meow 30 CTB 1 (Site). The Site is in Unit Letter L, Section 30, of Township 23 South and Range 32 East in Lea County, New Mexico. The GPS coordinates for the release site are 32.279777° N latitude and 103.720605° W longitude. The site location with respect to the nearest town is shown on Figure 1 and the topography of the area is shown on Figure 2.

Background

Based on the Release Notification C-141 form for nAPP2414124712, the release was discovered on May 18, 2024, and was due to an equipment failure. Upon discovery, the Site was shut-in and repairs ensued. The spill resulted in the release of approximately twenty-three (23) barrels (bbls) of produced water of which none were recovered for an approximate net loss of twenty-three (23) bbls of produced water.

Based on the Release Notification C-141 form for nAPP2427431240, the release was discovered on September 29, 2024, and was due to a leak at the connection on the LACT unit. Upon discovery, the LACT unit was shut down and repairs ensued. The spill resulted in the release of approximately six (6) bbls of produced water of which five (5) bbls were recovered for an approximate net loss of one (1) bbl of produced water. The release area is shown on Figure 3.

Groundwater and Site Characterization

Based on a review of the New Mexico Office of State Engineers and USGS databases, there is one known water sources within a ½-mile radius of the Site (C-04877-POD1) that was drilled in 2024 to a reported depth of one-hundred and five (105) feet (ft) below ground surface (bgs) where no groundwater was encountered. No other receptors (playas, wetlands, waterways, lakebeds, or ordinance boundaries) are located within each specific boundary or distance from the Site. According to the Karst Potential Map, the Site is located within a Low Karst area. The Site characterization documentation (Points of Diversion, Karst Potential, Significant Watercourse Map, Wetlands Map, FEMA Map, and Transaction Summary for Permit to Drill) are attached to the report.

NTGE characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, from the New Mexico Administrative Code (NMCA) Title 19, Chapter 15, Part 29, Section 12 (NMAC 19.15.29.12).

Initial Soil Delineation Assessment Summary and Findings

On May 22, 2024, NTGE conducted site assessment activities to assess the extent of impacts at the site for release nAPP2414124712. Four (4) vertical sample points (V-1 through V-4) were installed within the release area, while five (5) horizontal sample points (H-1 through H-5) were installed adjacent to the release area in order to characterize the impacts. Soil samples were collected at half-foot (0.5) to one (1) foot (ft) intervals from depths ranging from zero (0) to five (5) ft below ground surface (bgs) with a geotechnical hand auger. The hand auger was decontaminated with Alconox and deionized water between soil samples to prevent cross-contamination. Soil samples were placed directly into laboratory provided samples containers, placed on ice, and transported under proper chain-of-custody protocol to Cardinal Laboratories in

Hobbs, New Mexico for analysis of benzene, toluene, ethylbenzene, and xylene (BTEX) (by EPA Method 8021B), total petroleum hydrocarbon (TPH) (by EPA method 8015 modified), and chloride (method SM4500Cl-B). Analytical results indicated that chloride concentrations were below the NMOCD regulatory limits at 4 ft bgs for all vertical sample points. However, chloride concentrations were over the 19.15.29.13 Restoration and Re-Vegetation regulatory limits from zero (0) to three ft bgs.

On September 29, 2024, NTGE conducted site assessment activities to assess the extent of impacts at the site for release nAPP2427431240. Three (3) vertical sample points (V-1 through V-3) were installed within the release area, while nine (9) horizontal sample points (H-1 through H-9) were installed adjacent to the release area in order to characterize the impacts. Soil samples were collected at half-foot (0.5) intervals from depths ranging from zero (0) to four and a half (4.5) ft bgs with a geotechnical hand auger. Soil samples were delivered to Cardinal for the analysis of BTEX, TPH, and chloride. Analytical results indicated that BTEX and TPH concentrations were below the NMOCD regulatory limits at three (3) ft bgs for samples V-1 and V-2, while V-3 was successfully delineated at four (4) ft bgs. However, H-5 exhibited TPH concentrations above NMOCD regulatory limits.

On October 10, 2024, NTGE returned to site to conduct further horizontal delineation, for release nAPP2427431240, where one (1) horizontal sample (H-5A) was collected. Soil samples were delivered to Cardinal for the analysis of BTEX, TPH, and chloride. Analytical results indicated that the sample was below NMOCD regulatory limits for the site. Analytical results are included in Table 1, while soil boring locations are shown on Figure 3. The laboratory reports containing analytical methods and chain-of-custody documents are attached to the report.

Proposed Work Plan

After receiving and evaluating the soil boring data, for release nAPP2414124712, NTGE proposes to excavate the areas of V-1 through V-4 to a depth of four (4) ft bgs to ensure that the impacted soil has been removed from the Site. Devon personnel have expressed that the area of V-4 cannot be expanded vertically or horizontally due to the presence of facility infrastructure (i.e., vertical separator, production flowlines and electrical units) in and around the excavation and the associated safety concerns in further encroaching the infrastructure. Approximately 298 cubic yards of soil will remain in place until the time of decommissioning facility or in the event infrastructure modifications are made in the area that would alleviate the safety concerns, whichever is sooner. Approximately 260 cubic yards of impacted material will be excavated and transported offsite for disposal at an NMOCD approved landfill.

After receiving and evaluating the soil boring data, for release nAPP2427431240, NTGE proposes to excavate the areas of V-1 and V-2 to a depth of three (3) ft bgs to ensure that the impacted soil has been removed from the Site. Approximately 95 cubic yards of impacted material will be excavated and transported offsite for disposal at an NMOCD approved landfill. Devon personnel have expressed that the area of V-3 cannot be expanded vertically or horizontally due to the presence of facility infrastructure (i.e., LACT Unit) in and around the excavation and the associated safety concerns in further encroaching the infrastructure. Approximately 90 cubic yards of soil will remain in place until the time of facility decommissioning or in the event infrastructure modifications are made in the area that would alleviate the safety concerns, whichever is sooner. The proposed excavation map is shown on Figure 4.

Upon completion of the excavation, confirmation samples will be taken with a five (5) point composite sample and represent an area no greater than 200 square feet to comply with NMAC 19.15.23.12 and 19.15.29.13. Discrete soil samples will be collected from the sidewalls and bottom of the excavation if any staining is observed. All confirmation samples will be taken to a certified laboratory and analyzed for BTEX by EPA Method 8021B, TPH by EPA Method 8015B Modified and chloride by SM4500 Cl -B. If any of the confirmation samples collected exhibit concentrations above regulatory standards set by NMAC 19.15.23.12 and 19.15.23.13, the areas will be further excavated until concentrations are below Table 3.1 Closure Criteria.

	Action Type:	[C-141] Site Char./Remediation Plan C-141 (C-141-v-Plan)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
