SYNOPSIS

Etech Environmental & Safety Solutions, Inc. (Etech), on behalf of Devon Energy Production Company, LP (Devon), presents the following Site Characterization and Remediation Plan (SCRP) detailing delineation soil sampling activities and subsequent confirmation soil sampling activities, associated with an inadvertent release of crude oil at the Flagler 8 CTB 1 (Site). Based on laboratory analytical results, Devon proposes this SCR, which summarizes initial response efforts, sampling activities and details remediation objectives to rectify environmental impacts.

SITE LOCATION AND RELEASE BACKGROUNDS

The Site was reported on the Form C-141 to be located in Unit O, Section 8, Township 25 South, Range 33 East, in Lea County, New Mexico (32.13873°, -103.59416°) and is associated with oil and gas exploration and production operations on Federal Land managed by the Bureau of Land Management (BLM).

The location of the release is located northwest of the original provided coordinates in Unit M, Section 8, Township 25 South, Range 33 East, in Lea County, New Mexico (32.14012°, -103.60081°) (**Figure 1** in **Appendix A**).

On October 10, 2023, the rupture of a subsurface flowline caused 7.5 barrels (bbls) of crude oil to be released onto the production pad surface. A vacuum truck was immediately dispatched and recovered approximately 3 bbls of free-standing fluids. Devon reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Release Notification and Corrective Action Form C-141 (Form C-141), which was received by the NMOCD on October 16, 2023, and was subsequently assigned Incident Number nAPP2328556508. **Figure 2** in **Appendix A** depicts the observed release area, hereafter referred to as the Area of Concern (AOC).

SITE CHARACTERIZATION AND CLOSURE CRITERIA

Etech characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC) considering depth to ground water and the proximity to:

- Any continuously flowing watercourse or any other significant watercourse;
- Any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);
- An occupied permanent residence, school, hospital, institution or church;
- A spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes;
- Any freshwater well or spring;
- Incorporated municipal boundaries or a defined municipal fresh water well field covered under a municipal ordinance;
- A wetland;
- A subsurface mine;
- An unstable area (i.e. high karst potential); and
- A 100-year floodplain.

Depth to groundwater at the Site is estimated to be between 51 and 100 feet below ground surface (bgs) based off a nearby soil boring advanced by Atkins Engineering Associates, Inc., located approximately ½-mile east to southeast of the Site. Soil boring (C-04627-POD1) was advanced on June 7, 2022, via a truck mounted drill rig equipped with a hollow stem auger to total depth of 55 feet bgs. No fluids were observed throughout the drilling process nor after a 72-hour observation period. Following the observation

period, the boring was plugged and abandoned according to the appropriate regulations. The referenced well record is provided in **Appendix B**.

All potential receptors are not within the established buffers in NMAC 19.15.29.12. Receptor details and sources used to determine the site characterization are included in **Figure 1A**, **Figure 1B**, and **Figure 1C** in **Appendix A**.

Based on the results from the desktop review and estimated depth to groundwater at the Site, the following Closure Criteria was applied:

Constituents of Concern (COCs)	Laboratory Analytical Method	Closure Criteria [†]
Chloride	Environmental Protection Agency (EPA) 300.0	10,000 milligram per kilogram (mg/kg)
Total Petroleum Hydrocarbon (TPH)	EPA 8015 M/D	2,500 mg/kg
TPH-Gasoline Range Organics (GRO) + TPH-Diesel Range Organics (DRO)	EPA 8015 M/D	1,000 mg/kg
Benzene	EPA 8021B/8260B	10 mg/kg
Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)	EPA 8021B/8260B	50 mg/kg

[†]The reclamation concentration requirements of 600 mg/kg chloride and 100 mg/kg TPH apply to the top 4 feet of areas to be immediately reclaimed following remediation pursuant to NMAC 19.15.17.13.

DELINEATION SOIL SAMPLING ACTIVITIES

On August 30, 2024, and September 5, 2024, Etech conducted delineation activities to assess the presence or absence of residual soil impacts associated with the AOC. Eight delineation potholes (PH01 through PH08) were advanced within and around the AOC. Due to the safety constraints administered by the presence of subsurface utilities, the potholes were advanced to 4 feet bgs by non-mechanical means via hydrovac and then followed by soil sample collection via hand auger and/or hand shovel. Delineation activities were driven by field screening soil for volatile organic compounds (VOCs) utilizing a calibrated photoionization detector (PID) and chloride using Hach® chloride QuanTab® test strips in accordance with Site Closure Criteria or until refusal, whichever was encountered first. A minimum of two soil samples were collected from each delineation soil sampling location, representing the highest observed field screening concentrations and the greatest depth. Field screening results and soil descriptions are included on soil sampling logs shown in **Appendix C**. The delineation soil sample locations are shown in **Figure 2** in **Appendix A**. Photographic documentation of delineation activities is included in **Appendix D**.

Delineation soil samples were placed directly into lab provided pre-cleaned glass jars, packaged with minimal void space, labeled, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures, to Envirotech, Inc. Laboratories (Envirotech) in Farmington, New Mexico, for analysis of COCs.

DELINEATION LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for delineation soil samples collected outside the AOC periphery (PH05 through PH08) indicated concentrations of the COCs were below the Site Closure Criteria.

With the exception of soil sampling location PH04, laboratory analytical results for the soil samples collected within the AOC (PH01 through PH03) indicated elevated TPH-GRO+TPH-DRO and/or TPH exceeded the Site Closure Criteria up to 4 feet bgs. Residual TPH impacts are characterized by concentrations ranging from 6,160 mg/kg to 20,200 mg/kg.

Laboratory analytical results for PH04, collected from within the southern portion of the AOC, indicated concentrations of the COCs were below the Site Closure Criteria. Laboratory analytical results are summarized in **Table 1** included in **Appendix E**. The executed chain-of-custody form and laboratory reports are provided in **Appendix F**.

CONFIRMATION SOIL SAMPLING ACTIVITIES

Concurrently with delineation activities, Etech collected 5-point composite confirmation soil samples within the AOC at a sampling frequency representing no more than 200 square feet per soil composite soil sample (FS01 through FS14 and SW01 through SW08). The 5-point composite soil samples were comprised of five equivalent aliquots homogenized in a 1-gallon, resealable plastic bag. Confirmation soil samples were field screened, handled and analyzed as previously described. The locations of the confirmation soil samples are shown in **Figure 3** in **Appendix A**. Photographic documentation during soil sampling activities is included in **Appendix D**.

CONFIRMATION LABORATORY ANALYTICAL RESULTS

Laboratory analytical results indicated that concentrations of COCs for all final confirmation soil samples were below the applicable Site Closure Criteria, except for soil samples FS01 and FS02. Laboratory analytical results for FS01 and FS02 indicated elevated TPH-GRO+TPH-DRO and/or TPH exceeded the applicable Site Closure Criteria. Residual TPH impacts are characterized by concentrations of 3,840 mg/kg and 16,900 mg/kg, respectively. Laboratory analytical results are summarized in **Table 1** included in **Appendix E**. The executed chain-of-custody form and laboratory reports are provided in **Appendix F**.

PROPOSED REMEDIATION WORK PLAN

Based on the delineation soil sampling results, the following conclusions regarding the inadvertent release are presented:

- Laboratory analytical results indicated TPH concentrations appear to exist in the proximity of sample locations PH01 through PH03 up to 4 feet bgs. Further investigation is necessary to determine the vertical extent of residual impacts associated with PH03.
- Laboratory analytical results for delineation soil samples collected from PH04 through PH08 indicated COC concentrations were below the Site Closure Criteria, which will assist with defining the lateral extent of impacts associated with the AOC.
- Laboratory analytical results for the confirmation soil samples indicated concentrations of COCs were below the Site Closure Criteria, except soil samples FS01 and FS02.

Based on the conclusions drawn above, Devon proposes the following remedial corrective action options:

- Devon proposes to investigate the extent of residual impacts in proximity to PH03 via mechanical equipment (**Figure 4** in **Appendix A**). Soil samples will be collected and handled as described above and submitted to an accredited laboratory for analysis of TPH, BTEX and chloride. Soil sample locations will be mapped using a handheld GPS unit.
- Once, the extent of residual impacts within in proximity to PH03 have been identified, residual impacted soil will be excavated via mechanical equipment to the Maximum Extent Practical (MEP) and nondestructive techniques based on delineation analytical results and field screening soil for VOCs and chlorides.
- A hydro excavation within the proximity of PH01 and PH02 up to up to 2 feet bgs within PH01 and up to 4 feet bgs within PH02. (**Figure 4** in **Appendix A**). Approximately 919 square feet and 88 cubic yards (CY) are anticipated to be excavated within PH01 and PH02.

- The proposed delineation and/or excavation will likely require operator oversight and additional safety measures near their respective subsurface pipelines before or during excavation activities. Devon and/or a third-party operator may implement additional safety precautions above encroachment guidelines at their company's discretion for the health and safety of on-site personnel and for the structural integrity of utilities. Such restrictions include but are not limited to:
 - Shifting the proposed delineation locations and/or excavation extent to adhere to established buffer zone(s) around one or more utilities.
 - Inducing a change in proposed delineation and/or excavation depth(s) around one or more utilities.
- Upon receipt and review of delineation soil laboratory analytical results, Devon will determine the appropriate measure of corrective actions that will include:
 - Removal of soil to the MEP as proposed in this SCRP and documenting and estimating an amount of impacted soil to be left in place at the Site with a subsequent Deferral Report detailing remediation efforts and soil sampling activities or
 - Preparing a SCRP Addendum (SCRPA) detailing the next course of remedial actions to address the presence of soil impacts at the Site, based off an estimated lateral and vertical extent of impacted soil from assessment and delineation activities.

PROPOSED SCHEDULE

Upon the notice of NMOCD approval of this SCRP, Devon will begin the proposed remediation activities outlined above and provide a report detailing completed remediation activities for Incident Number nAPP2328556508.

	Action Number: 405319
	Action Type: [C-141] Site Char./Remediation Plan C-141 (C-141-v-Plan)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
