ESRR Project No. 2302/ VP-19871

To Whom It May Concern:

Earth Systems Response & Restoration (ESRR), on behalf of Civitas Resources (Civitas), presents the following Closure Request Report (CRR) detailing all remedial efforts to date associated with an inadvertent release of produced water at the former Tap Rock operating (Tap Rock) location, Nailed It B Federal Com #222H (Site). Based on completed remedial actions and laboratory analytical results from recent soil sampling events, Civitas is requesting No Further Action (NFA) at the Site.

Site Location & Incident Description

The Site is located in Unit F, Section 36, Township 26 South, Range 30 East, in Eddy County, New Mexico (32.00078°, -103.83695°) and is associated with oil and gas exploration and production operations on Federal Land managed by the Bureau of Land Management (BLM) (**Figure 1**).

On December 16, 2021, a valve on a well pipe was left open during flowback, causing the release of approximately 13 barrels (bbls) of produced water onto the adjacent production pad surface (**Figure 2**). Immediate notice was given to the New Mexico Oil Conservation Division (NMOCD) on December 17, 2021, by Notification of Release (NOR) and a Corrective Action Form C-141 (Form C-141). The release was subsequently assigned Incident Number nAPP2135134919.

Background

During late 2021, a Tap Rock contracted third-party consultant was reported by Civitas to have completed initial delineation as well as overseen initial excavation activities via mechanical equipment at the Site. An unknown number of cubic yards of impacted soil was initially excavated. The excavation was advanced to unknown depths and assumed to have been disposed at the nearest disposal facility.

On March 2, 2022, the third-party consultant requested an extension to the March 16, 2022 due date. NMOCD approved the request and updated the due date to June 16, 2022.

On June 22, 2022, the third-party consultant requested an additional extension to the June 16, 2022 due date. NMOCD approved the request and updated the due date to September 16, 2022.

 Incident Number: nAPP2135134919
 GPS: 32.00078°, -103.83695°

Amid the transition from Tap Rock operating to Civitas operating, the third-party consultant was not retained.

On June 16, 2024, Civitas assigned ESRR to the project to investigate work completed to date by the third-party consultant and to complete additional soil sampling activities where deemed necessary for closure of this incident.

On April 1, 2024, Civitas requested an extension to the past due deadline in order to get back in compliance prior to submittal of this CRR. NMOCD denied the request, and responded as follows:

"A remediation closure report was due on 9/16/2022. Your request for extension is denied. An extension needs to be requested before the 90-day remediation deadline has expired. Please move forward with the remediation work as quickly as possible. Include this e-mail correspondence in the remediation and/or closure report."

Site Characterization

ESRR characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC). The following proximities were estimated:

- Greater than 5 miles of any continuously flowing watercourse or any other significant watercourse;
- Between 1 and 5 miles of any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);
- Greater than 5 miles of any occupied permanent residence, school, hospital, institution or church;
- Between 1 and 5 miles of any spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes;
- Between 1 and 5 miles of any other freshwater well or spring;
- Greater than 5 miles of any incorporated municipal boundary or a defined municipal fresh water well field covered under a municipal ordinance;
- Between 500 and 1,000 feet of any wetland;
- Greater than 5 miles of any subsurface mine;
- Between 1 and 5 miles of any unstable area (i.e. high karst potential); and
- Between 1 and 5 miles of a 100-year floodplain.

Receptor details used to determine the Site characterization are included in **Figure 1A** and **Figure 1B**. **Referenced Well Records** for the closest depth to water wells are attached.

Based on the results from the desktop review and no depth to water well within 0.5 miles of the Site with data no greater than 25 years old, the following Closure Criteria was applied:

Constituents of Concern (COCs)	Closure Criteria [‡]
Chloride	600 milligram per kilogram (mg/kg)
Total Petroleum Hydrocarbon (TPH)	100 mg/kg
Benzene	10 mg/kg
Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)	50 mg/kg

[‡] The reclamation concentration requirements of 600 mg/kg Chloride and 100 mg/kg TPH apply to the top 4 feet of areas to be immediately reclaimed following remediation pursuant to NMAC 19.15.17.13.

TPH= Gasoline Range Organics + Diesel Range Organics + Oil Range Organics

Delineation Activities

On October 23, 2024, ESRR conducted delineation activities to assess the presence or absence of residual soil impacts associated with the Area of Concern (AOC) determined by referencing Civitas provided photographs. Thirteen delineation boreholes (HA-1 through HA-13) were advanced via hand auger within and surrounding the estimated AOC. Delineation activities were driven by field screening soil for chloride utilizing QuanTab® test strips. Five soil samples were collected from each delineation borehole, representing the highest observed field screening concentrations and the greatest depth. Delineation soil samples were placed directly into clean laboratory-provided jars, packed with minimal void space, labeled, and placed on ice. The delineation soil samples were transported under strict chain-of-custody procedures, to Eurofins in Carlsbad, New Mexico, for analysis of the COCs. **Photographic Documentation** of all activities are attached.

Laboratory analytical results for soil samples collected within and surrounding the AOC (HA-1 through HA-3 and HA-5 through HA-13) were compliant with Site Closure Criteria and/or the reclamation standard defining the horizontal periphery of the AOC.

Laboratory analytical results for delineation soil sample HA-4, collected within the AOC, indicated Total TPH was above the Site Closure Criteria and/or the reclamation standard at 4 feet bgs. The elevated TPH concentration, specifically for TPH-DRO, is characterized by a concentration of 220 mg/kg. Laboratory results are summarized in **Table 1**, included in the attachments. The locations of all delineation soil samples are shown in **Figure 2**.

Remediation Activities

On March 3, 2025, ESRR completed additional excavation activities of identified impacts performed via mechanical equipment based on laboratory analytical results associated with delineation soil sampling activities and visual observation by ESRR. The excavation was vertically advanced to an approximate depth of 5 feet bgs.

Following the removal of soil, ESRR collected 5-point composite soil samples at a sampling frequency of 200 square feet from the excavation floor (CS-1) and sidewalls (SW-1 and SW-2). The 5-point composite soil samples were comprised of five equivalent aliquots homogenized in a 1-gallon resealable plastic bag. The confirmation soil samples were handled, transported, and analyzed as previously described.

Laboratory analytical results indicated that concentrations of COCs for all final confirmation soil samples were below the applicable Site Closure Criteria and/or reclamation standard. Laboratory results are summarized in **Table 1**, included in the attachments. The locations of all final confirmation soil samples are shown in **Figure 3**.

Approximately 40 cubic yards (CY) of impacted soil was removed from the Site and transported to R360 Red Bluff in Orla, Texas under Civitas approved manifests. Upon receipt of the final confirmation soil samples results, the excavation was backfilled with clean, locally sourced soil and the Site was restored to “as close to its original state” as possible. The final soil cover was contoured to match the Site’s pre-existing grade to prevent ponding of water and erosion.

Closure Request

Based on laboratory analytical results, impacts associated with the inadvertent release have been delineated, excavated and removed from the Site in accordance with Site Closure Criteria. Civitas believes the completed remedial actions meet the requirements set forth in NMAC 19.15.29.13 regulations in order to be protective of human health, the environment, and groundwater. As such, NFA appears warranted at this time, and Civitas respectfully requests Closure of this CRR associated with Incident Number nAPP2135134919.

If you have any questions or comments, please do not hesitate to contact Gilbert Moreno at (832) 541-7719 or gmoreno@earthsyst.net. Documentation of correspondence and notifications and Executed chain-of-custody forms and laboratory analytical reports are attached.

Sincerely,

Hello,

Earth Systems R & R (ESRR) on behalf of Civitas Resources (Civitas) is requesting a final extension to the current deadline for a report required in 19.15.29.12.B(1) NMAC at the Nailed It Federal Com #222H (Site).

A produced water release was discovered on December 16, 2021, and was subsequently assigned Incident Number nAPP2135134919 at a former Tap Rock Operating location. From December 2021 through September 2022, a Tap Rock contracted third-party consultant completed an initial site assessment and oversaw remediation activities. Since, Civitas has acquired this Site from Tap Rock Operating and the original third-party consultant was not retained. Unfortunately, lab analytical data and reports were not transferred over to Civitas. ESRR was contracted to complete a thorough investigation of any remaining impacts and to perform additional remediation if deemed necessary. ESRR performed additional delineation activities during October 2024 and oversaw additional remediation activities of approximately 40 cubic yards in March 2025.

Civitas requests a final extension of the past due deadline for the release associated with Incident Number nAPP2135134919 in order to get back in compliance prior to submitting a subsequent corrective action report completed by ESRR.

Thanks,

Gilbert Moreno | Carlsbad Operations Manager- Project Geologist

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/24/2024 3:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was -4.6°C.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 3/3/2025 2:28 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: CS-1 (890-7741-1), SW-1 (890-7741-2) and SW-2 (890-7741-3).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-104251 and analytical batch 880-104310 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	<i>Unavailable.</i>

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	False
If all the actions described above have not been undertaken, explain why	FLUIDS SOAKED IN THEREFORE NO RECOVERY OF FLUIDS TOOK PLACE. LEAK WAS REPAIRED. SITE WAS FLAGGED FOR ONE-CALL TO BEGIN DELINEATION/REMEDIATION OF THE SITE.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
