## HUNGRY HORSE, LLC

The following *Remediation Summary and Closure Request* serves as a condensed update on field activities undertaken at the afore referenced Site.

### Background:

The site is located in Unit Letter I (NE/SE), Section 30, Township 21 South, Range 33 East, approximately 25 miles West of Eunice, in Lea County, New Mexico. The property is located on New Mexico State Trust Land. Topographic Map, OSE POD Locations Map, and USGS Well Locations Map are included as Figure 1, Figure 2, and Figure 3, respectively.

The release occurred on an active lay-flat water transfer line; Latitude 32.449380 North, Longitude 103.604686 West. The NMOCD Notice of Release Form indicated that on March 24, 2024 approximately 29 bbls of produced water were released due to equipment failure. A crew was dispatched to the release site and 20 bbls of fluid were recovered. Previously submitted pages of the NMOCD Notice of Release Form are available on the NMOCD Imaging System.

### NMOCD Site Classification:

A search of the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) groundwater databases was completed in an effort to determine the horizontal distance to known water sources within a half mile radius of the Release Site. Approximate depth to groundwater was determined using maintained and published water well data. Karst mapping indicates the site is located in an Erosional Karst designated area. Groundwater depth information is provided as Attachment IV and the results are depicted on Figures 2 & 3.

One water well was located within a half mile of the release area. CP 1882 POD 1 was drilled on October 6, 2021. The bore was drilled to 106 feet bgs; no groundwater was encountered at any point. The bore was subsequently plugged. However, as the release occurred within an Erosional Karst designated area, the site was remediated according to the strictest NMOCD Closure Criteria. Utilizing this information, the NMOCD Closure Criteria for the Site were determined as follows:

Depth to Groundwater	Constituent	Method	Limit
>106'	Chloride	EPA 300.0 or SM4500 CLB	600 mg/kg
	TPH (GRO + DRO + MRO)	EPA SW-846 Method 8015M Ext	100 mg/kg
	BTEX	EPA SW-846 Methods 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Methods 8021B or 8260B	10 mg/kg

A United States Department of Agriculture (USDA) Web Soil Survey was completed to determine soil types in the area of reclamation. Web Soil Survey indicates the area is located in the Kermit soils and Dune land complex comprised of fine sand soils with 5 to 12 percent slopes. As the release occurred on active production facility, no seeding will be required. Karst, Wetland, and Soil Maps are provided as Attachment I.

**Delineation and Remediation Activities:**

On April 10, 2024, Hungry Horse conducted an initial site assessment consisting of photographing, mapping, and sampling the release area. During sampling, hand augered test bores were advanced throughout the affected area in an effort to determine the vertical extent of contamination. These sample locations are identified by SP designation. In addition, hand augered sample bores were advanced along the outside edges of the affected area in an effort to determine the horizontal extent of contamination. These sample locations are identified by HZ designation. During the advancement of the hand augered sample bores, soil samples were collected and field screened for the presence of chloride concentrations utilizing a Hach Quantab® chloride test kit.

Based on field observations and field screen data noted above and provided in Attachment V, sixteen representative soil samples were selected for laboratory analysis. Delineation soil samples SP1 through SP4, all at Surface and one-foot bgs, and HZ1 through HZ4, each at Surface and one-foot bgs, were submitted to the laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated contaminant concentrations were below the NMOCD Closure Criteria in each of the submitted samples, with the exception of SP1 through SP4 at surface and HZ1 through HZ4 at surface which exhibited TPH and/or Chloride concentrations exceeding the NMOCD Closure Criteria.

On July 29, 2024 Hungry Horse personnel utilized mechanical equipment to abrade the release area removing the surface of the production location. The remediation activities were expanded beyond the release area to include the previously sampled HZ1 through HZ4, respectively. All soil impacted above the NMOCD Closure Criteria was scraped and approximately three cubic yards were loaded for transport to a NMOCD approved disposal facility.

On August 1, 2024, Select Water notified NMOCD that sixty-five closure samples would be collected on August 5, 2024.

On August 2, 2024, new horizontal sample locations were collected and designated HZ1 through HZ4. Hungry Horse personnel submitted all samples to the lab for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated contaminant concentrations were below the NMOCD Closure Criteria for the submitted samples.

On August 5, 2024, sixty-five composite closure samples were collected from the release area encompassing the previously sampled HZ1 through HZ4. Hungry Horse personnel submitted all samples to the lab for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated contaminant concentrations were below the NMOCD Closure Criteria for the submitted samples.

---

**Sampling Procedure and Identification:**

During confirmation sampling, five-point composite soil samples were collected from the floor of the abraded area, each collected sample representing an area no greater than 200 square feet. These sample locations are identified by FL designation. As the surface of the affected area was scraped up and not excavated, no sidewall samples were required. An Excavation Sample Map is attached as Figure 5

**Restoration, Reclamation, and Re-Vegetation:**

As the area is needed for production operations, and based upon laboratory analytical results from confirmation soil samples, Select Water requested that caliche (approximately three cubic yards) be hauled in and dispersed upon the location for appearance purposes.

As the affected area is located on an active production location, no seeding will be required.

**Closure Request:**

Remediation activities were conducted in accordance with applicable NMOCD Regulations. Soil affected above the NMOCD Closure Criteria has been scraped and hauled to an NMOCD approved facility for disposal. Laboratory analytical results from composite confirmation samples indicate concentrations of BTEX, TPH, and chloride are below the NMOCD Closure Criteria.

Based on laboratory analytical results, Select Water Solutions, LLC respectfully requests closure of the Dagger 3 location, nAPP2408551309.

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lea County, New Mexico

Survey Area Data: Version 20, Sep 6, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

	Action Number: 428826
	Action Type: [C-141] Remediation Closure Request C-141 (C-141-v-Closure)

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

**Initial Response**

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
