Pima Environmental Services, LLC (Pima) has been contracted by Spur Energy to perform a spill assessment, remediation activities, and submit this closure report for a produced water and crude oil release that occurred at the Continental B Yeso Tank Battery (Continental). The initial release was discovered on March 22nd, 2024. This incident was assigned Incident ID NAPP2408531365, by the New Mexico Oil Conservation Division (NMOCD).

Site Characterization

The Continental is located approximately 7.99 miles southwest of Loco Hills, NM. This spill site is in Unit N, Section 30, Township 17S, Range 29E, Latitude 32.79920, Longitude -104.11520, Eddy County, NM. Figure 1 references a location map.

According to the New Mexico Bureau of Geology and Mineral Resources, the geological composition of the area consists of older alluvial deposits found in upland plains and piedmont regions, along with calcic soils and eolian cover sediments characteristic of the High Plains province, dating from the middle to lower Pleistocene epoch (refer to Appendix B). The dominant soil type within the site is classified as Simona gravelly fine sandy loam with 0 to 3 percent slopes, as identified in the USDA Natural Resources Conservation Service soil survey (Appendix B). Drainage characteristics for the area are described as well-drained. The geological assessment further concludes that there is a low likelihood of karst features occurring in proximity to the Continental site (see Figure 3). The closest major watercourse is an unnamed Salt Playa, situated approximately 13.10 miles to the southeast (Appendix A).

According to data from the New Mexico Office of the State Engineer (OSE), the nearest groundwater at the Continental B Yeso Tank Battery site is located at a depth greater than 102 feet below ground surface (bgs), as indicated by water well RA 13544, which was drilled on February 4, 2025. In addition, information from the United States Geological Survey (USGS) identifies the closest groundwater monitoring well—USGS 325448104071801—located approximately 7.87 miles from the site, with a recorded water depth of 24 feet bgs. For precise well locations and spatial context, refer to Appendix A, which contains a detailed water well map showing both OSE and USGS well locations.

Release Information

NAPP2408531365: On March 22, 2024, a corroded fitting on the check valve led to the release of approximately 26 barrels of produced water onto the engineered pad and an adjacent roadway. Spur Energy personnel promptly mobilized to implement response measures and initiate containment efforts. Cleanup operations successfully limited the spread of the release and resulted in the recovery of 2 barrels of produced water. The affected area is depicted in Figure 5.

Site Assessment and Soil Sampling Results

On March 12, 2025, Pima Environmental Services mobilized personnel to the site to initiate delineation activities. Soil sampling was conducted from the release point extending to the northeastern boundary of the impacted area within the adjacent pasture. Soil sampling was conducted from the release point to the northeastern boundary of the impacted area within the adjacent pasture. A total of twenty-five vertical delineation samples (V1–V25) and fourteen horizontal delineation samples (H1–H14) were collected at varying depths. Delineation boundaries were established based on field screening results obtained using a Photoionization Detector (PID) and a titration method. All samples were collected as grab samples from the surface to a depth of 4 feet below ground surface (bgs). The deepest horizontal delineation sample was submitted for laboratory analysis to determine total chloride using EPA Method 300.0; benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA Method 8021B; and motor, diesel, and gasoline range organics (MRO, DRO, and GRO) using EPA Method 8015D. All samples were placed in laboratory-supplied glassware, labeled appropriately, and stored on ice prior to delivery to Cardinal Laboratories in Hobbs, New Mexico (Appendix C). A copy of the field screening results is provided in Attachment D. Samples V1–V7 and V9 were taken within the engineered pad, whereas samples V8 and V11–V25 were collected from the surrounding pasture beyond the pad boundary.

On May 16, 2025, Pima personnel returned to the site to complete delineation activities for the on-pad area. Given that groundwater was measured at over 101 feet bgs, no further remediation is planned for this zone; however, complete delineation was required. Additional soil samples (B1–B12) were collected at varying depths to ensure full vertical delineation. A summary of the analytical results is presented in the data table, with complete laboratory reports provided in Appendix E.

Remediation Activities

Between April 1 and April 30, Pima Environmental, in partnership with SDR Excavating, deployed a heavy equipment operator and a field technician to carry out remediation of the impacted area. Excavation depths were determined based on soil sample locations. Samples V1 through V7, located within the engineered pad, were left in place. Areas corresponding to samples V8–V11, V13, and V24–V25 were excavated to a depth of six inches below ground surface (bgs). The section containing samples V12 and V14–V17 was excavated to six feet bgs, while the area associated with samples V18–V23 was excavated to four feet bgs. In total, approximately 7,080 square feet were excavated, resulting in the removal of an estimated 1,450 cubic yards of contaminated soil. The soil was securely transported to Lea Land, a New Mexico Oil Conservation Division (NMOCD)-approved disposal facility.

On April 13, 2025, Spur Energy proactively submitted a 48-hour sampling notification as part of the preliminary preparations leading up to the final confirmation sampling event. This precautionary step was taken with the expectation that all sampling results would fall below the closure criteria established by the New Mexico Oil Conservation Division (NMOCD). Should the results confirm compliance, the plan is to move forward with the closure process. For additional details, the 48-hour notification can be referenced in Appendix C.

On April 16, 2025, a Pima Environmental field technician performed a confirmation sampling event at the Continental site to assess the effectiveness of the remedial excavation. A total of fifty composite bottom samples (designated CS1–CS50) and twenty-seven composite sidewall samples (designated CSW1–CSW27) were collected. Each sidewall sample represented a five-point composite collected vertically along the full extent of the excavation sidewalls, from the base to the surface, ensuring comprehensive spatial representation. The sampling methodology adhered to standard industry protocols for post-excavation verification and contaminant delineation.

Soil samples CS1 and CS2 were collected from an area excavated to a depth of four feet, covering approximately 365 square feet. Corresponding confirmation sidewall composite samples, CSW16 and CSW9, were collected from the perimeter of this excavation, totaling approximately 100 square feet. Soil samples CS3 through CS17 were obtained from an excavation zone measuring approximately 3,000 square feet, with confirmation sidewall composite samples CSW12 through CSW14 collected from the surrounding perimeter, covering an estimated 85 square feet.

For an excavation to a depth of 0.5 feet, soil samples CS38 through CS50 were collected from an area spanning approximately 2,500 square feet. Associated confirmation sidewall composite samples—CSW10, CSW11, CSW15, and CSW16—were taken from the perimeter, covering approximately 55 square feet. Soil samples CS18 through CS20 were collected from another 0.5-foot excavation zone, covering approximately 569 square feet, with corresponding confirmation sidewall samples CSW8 and CSW18 taken from the excavation perimeter, totaling around 40 square feet.

For the six-foot deep excavation, soil samples CS21 through CS26 were collected from an area of approximately 1,200 square feet. Confirmation sidewall composite samples—CSW5 through CSW7 and CSW19 through CSW21—were collected from the vertical walls, encompassing approximately 1,060 square feet.

Soil samples CS27 through CS32 were taken from a four-foot-deep excavation zone covering about 1,104 square feet, with confirmation sidewall samples CSW3, CSW4, and CSW22 through CSW24 obtained from the excavation walls, covering an estimated 688 square feet. Finally, soil samples CS33 through CS37 were collected from a 0.5-foot-deep excavation, totaling approximately 993 square feet. Corresponding confirmation sidewall composite samples—CSW1, CSW2, and CSW25 through CSW27—were collected from the excavation perimeter, covering approximately 62 square feet.

The results of this confirmation sampling event are summarized in the following data table.

Each soil sample was a 5-point composite derived from the excavated area, specifically representing an area not exceeding 200 square feet of the open excavation. A total of seventy seven (77) samples were collected for laboratory analysis for total chloride using EPA Method 300.0; benzene, toluene, ethylbenzene and total xylenes (BTEX) using EPA Method 8021B; and motor, diesel, and

gasoline range organics (MRO, DRO, & GRO) by EPA Method 8015D. All samples were placed into laboratory supplied glassware, labeled, and maintained on ice until delivery to Cardinal Laboratories in Hobbs, New Mexico (Appendix C).

Due to elevated chloride levels in confirmation samples CS1 and CS2, which exceeded the permitted threshold, a second round of confirmation sampling was scheduled. On April 21, 2025, Spur Energy proactively submitted a 48-hour sampling notification as part of the preliminary preparations for the final confirmation sampling event. If the subsequent results demonstrate compliance, the plan is to proceed with the closure process. For further details, the 48-hour notification can be found in Appendix C.

On April 23, 2025, Pima Environmental conducted additional remediation in the area overlapping soil samples CS1 and CS2, excavating the area an additional two feet below ground surface (bgs), which brought the total excavation depth to six feet bgs. On April 24, 2025, a Pima Environmental field technician performed a confirmation sampling event at the Continental site to evaluate the effectiveness of the remedial excavation. In addition to the confirmation sampling, a five-point composite sample of the backfill material was collected to ensure that clean, native soil was used for backfilling purposes.

The results of this confirmation sampling event are summarized in the following data table.

A total of fifty composite bottom samples (designated CS1–CS50) and twenty-seven composite sidewall samples (designated CSW1–CSW27) were collected. Each sidewall sample represented a five-point composite collected vertically along the full extent of the excavation sidewalls, from the base to the surface, ensuring comprehensive spatial representation. The sampling methodology adhered to standard industry protocols for post-excavation verification and contaminant delineation.

Upon confirmation that all soil samples met the closure standards set by the New Mexico Oil Conservation Division (NMOCD), clean backfill material was brought in and utilized to restore the excavated area, returning it to its original state.

Closure Request

After careful review, Pima requests that this incident, NAPP2408531365, be closed. Spur Energy has complied with the applicable closure requirements set forth in rule 19.15.19.12 NMAC.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico
Survey Area Data: Version 20, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Nov 12, 2022—Dec 2, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

QUESTIONS

| Nature and Volume of Release (continued) | |
|---|--|
| Is this a gas only submission (i.e. only significant Mcf values reported) | No, according to supplied volumes this does not appear to be a "gas only" report. |
| Was this a major release as defined by Subsection A of 19.15.29.7 NMAC | Yes |
| Reasons why this would be considered a submission for a notification of a major release | From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more. |
| With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form. | |

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

| | |
|--|------|

| If all the actions described above have not been undertaken, explain why | N/A |

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Remediation Closure Request

Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.

| | |
|--|---|
| Requesting a remediation closure approval with this submission | Yes |
| Have the lateral and vertical extents of contamination been fully delineated | Yes |
| Was this release entirely contained within a lined containment area | No |
| All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion | Yes |
| What was the total surface area (in square feet) remediated | 7080 |
| What was the total volume (cubic yards) remediated | 1450 |
| All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene | Yes |
| What was the total surface area (in square feet) reclaimed | 7080 |
| What was the total volume (in cubic yards) reclaimed | 1450 |
| Summarize any additional remediation activities not included by answers (above) | The impacted area off-pad was excavated to varying depths, followed by a confirmation sampling event to assess remaining contamination. Based on the initial results, additional remediation through further excavation was conducted, after which a second round of confirmation sampling took place. Once analytical results confirmed the removal of impacted material, the excavated area was backfilled with clean soil and restored to its natural contour. |

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
