Quality Assurance: The above analyses are performed in accordance with ASTM, UOP, GPA guidelines for quality assurance, unless otherwise stated. The test results apply to the sample as received.

**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility Id#** fAPP2127031815**Facility:** Red Tank 19 CTB**Duration of Event:** 1 Hour 30 Minutes**Start Time:** 12:30 PM**Cause:** Emergency Flare > Equipment Malfunction > VRU's > VFD Fault**Method of Flared Gas Measurement:** Gas Flare Meter**Operator:** OXY USA, Inc.**Flare Date:** 11/18/2025**MCF Flared:** 79**End Time:** 02:00 PM

---

**1. Reason why this event was beyond Operator's control:**

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. OXY engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, the facility's VRU's suddenly and unexpectedly malfunctioned on VFD faults, leading to intermittent flaring, which was caused by overpressure at the facility due to the constant stop loss of the units. The OXY production technicians successfully addressed the malfunction alarms and cleared the faults by adjusting the suction pressure, ensuring continued operation of the VRUs. OXY's field and operations teams diligently oversee the facility and field pressure to swiftly identify any deviations from accepted standard operational parameters. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. OXY made every effort to control and minimize emissions during this event. The occurrence of this event was beyond OXY's control all feasible measures were applied to manage and reduce emissions to the greatest extent.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen emissions as much as possible. This facility is unmanned, except when Oxy production techs are gathering data daily or conducting daily walk-throughs to ensure that there are no problems, circumstances and/or assist other personnel on-site for maintenance purposes. In this case, the facility's VRU's suddenly and unexpectedly malfunctioned on VFD faults, leading to intermittent flaring, which was caused by overpressure at the facility due to the constant stop loss of the units. The OXY production technicians successfully addressed the malfunction alarms and cleared the faults by adjusting the suction pressure, ensuring continued operation of the VRUs. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. OXY made every effort to control and minimize emissions during this event. The occurrence of this event was beyond OXY's control all feasible measures were applied to manage and reduce emissions to the greatest extent.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

OXY is limited in its corrective actions to eliminate the cause and potential recurrence of malfunctioning VRU's, as notwithstanding proper VRU, design and operation, various forms of mechanical or technical issues can be sudden, reasonably unforeseeable, and unexpected which can cause equipment malfunctions to occur without warning or advance notice. OXY makes every effort to control and minimize emissions as much as possible during these circumstances. OXY continually strives to maintain and operate all its equipment in a manner consistent with good practices for minimizing emissions and reducing the number of emission events. OXY has a strong and positive equipment preventative maintenance program in place.

**QUESTIONS**

| Date(s) and Time(s)                            |            |
|------------------------------------------------|------------|
| Date vent or flare was discovered or commenced | 11/18/2025 |
| Time vent or flare was discovered or commenced | 12:30 PM   |
| Time vent or flare was terminated              | 02:00 PM   |
| Cumulative hours during this event             | 2          |

| Measured or Estimated Volume of Vented or Flared Natural Gas              |                                                                                                           |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Natural Gas Vented (Mcf) Details                                          | Not answered.                                                                                             |
| Natural Gas Flared (Mcf) Details                                          | Cause: Other   Other (Specify)   Natural Gas Flared   Released: 79 Mcf   Recovered: 0 Mcf   Lost: 79 Mcf. |
| Other Released Details                                                    | Not answered.                                                                                             |
| Additional details for Measured or Estimated Volume(s). Please specify    | Gas Flare Meter                                                                                           |
| Is this a gas only submission (i.e. only significant Mcf values reported) | Yes, according to supplied volumes this appears to be a "gas only" report.                                |

| Venting or Flaring Resulting from Downstream Activity             |               |
|-------------------------------------------------------------------|---------------|
| Was this vent or flare a result of downstream activity            | No            |
| Was notification of downstream activity received by this operator | Not answered. |
| Downstream OGRID that should have notified this operator          | Not answered. |
| Date notified of downstream activity requiring this vent or flare | Not answered. |
| Time notified of downstream activity requiring this vent or flare | Not answered. |

| Steps and Actions to Prevent Waste                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control. | True                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Please explain reason for why this event was beyond this operator's control                                                      | <p>This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. OXY engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, the facility's VRU's suddenly and unexpectedly malfunctioned on VFD faults, leading to intermittent flaring, which was caused by overpressure at the facility due to the constant stop loss of the units. The OXY production technicians successfully addressed the malfunction alarms and cleared the faults by adjusting the suction pressure, ensuring continued operation of the VRUs. OXY's field and operations teams diligently oversee the facility and field pressure to swiftly identify any deviations from accepted standard operational parameters. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. OXY made every effort to control and minimize emissions during this event. The occurrence of this event was beyond OXY's control all feasible measures were applied to manage and reduce emissions to the greatest extent.</p> <p>It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen</p> |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps taken to limit the duration and magnitude of vent or flare                  | emissions as much as possible. This facility is unmanned, except when Oxy production techs are gathering data daily or conducting daily walk-throughs to ensure that there are no problems, circumstances and/or assist other personnel on-site for maintenance purposes. In this case, the facility's VRU's suddenly and unexpectedly malfunctioned on VFD faults, leading to intermittent flaring, which was caused by overpressure at the facility due to the constant stop loss of the units. The OXY production technicians successfully addressed the malfunction alarms and cleared the faults by adjusting the suction pressure, ensuring continued operation of the VRUs. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. OXY made every effort to control and minimize emissions during this event. The occurrence of this event was beyond OXY's control all feasible measures were applied to manage and reduce emissions to the greatest extent. |
| Corrective actions taken to eliminate the cause and reoccurrence of vent or flare | OXY is limited in its corrective actions to eliminate the cause and potential recurrence of malfunctioning VRU's, as notwithstanding proper VRU, design and operation, various forms of mechanical or technical issues can be sudden, reasonably unforeseeable, and unexpected which can cause equipment malfunctions to occur without warning or advance notice. OXY makes every effort to control and minimize emissions as much as possible during these circumstances. OXY continually strives to maintain and operate all its equipment in a manner consistent with good practices for minimizing emissions and reducing the number of emission events. OXY has a strong and positive equipment preventative maintenance program in place.                                                                                                                                                                                                                                                                                                                               |
