Mr. Martin,

Please find the enclosed 5 documents which include a C103 , a wellbore sketch and a copy of the MIT for the following wells:

1934-361G

2034-121K

1933-241L

1831-241G

2031-251G

The 2 highlighted wells are on the inactive well list and in the next month will become an issues (no production for more than 15 months).

This is the summary I pulled at the beginning of June:

There were 6 additional wells (I did not show on the above table) but those have been resolved, wells are back in production.

I am going to finish the C 103 for the first well in the list 20 32 04 1 K , we tested the casing , 500 psi 30 minutes and also got a good chart.

I am also working on the list that Lynn gave me, C 103 and 104, the bottom 3 wells on the list are wells that use to feed the Reliant plant and now are sending gas to the OXY plant, the top 2 wells are existing wells we brought back to production when leg 10 was completed and the 30 021 20478, 19 30 21 1 G is a well that barely produces due to the liquid loading at the end of leg 10.

I will send originalsof the enclosed documents by federal express in the next couple of days.

Thank you
