 COMMENCE DRILLING OPNS. ☐ P AND A ☐  
 CASING/CEMENT JOB ☐

OTHER: VARIANCE TO CMT TO SURFACE ☒

OTHER: ☐

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

PLEASE SEE ATTACHED BLM APPROVAL. Devon Energy Production Co., L.P. (Devon) respectfully request a variance to the subject well: Received verbal from Long Vo, 1/21/21 to move forward with completion of well, and to monitor pressure on intermediate casing during completion operations to ensure no communication is observed. The Yukon Gold 31-19 Fed Com 211H is located in a Secretary Potash area, and we request a variance against getting cement to surface on two casing strings (as outlined in the APD). The top of cement for the intermediate string is located at a depth of 363', which is at the surface casing shoe. This provides adequate coverage and protection over the salt section. In addition, the top of cement on the production string is at 7240' MD, which provides us with 365' of tieback into our intermediate casing. The intermediate shoe (7605' MD and 7498' TVD) is located within the 1st Bone Spring Lime, which means we have an additional 1592' of cement below our intermediate shoe that is providing isolation from our target in the 2nd Bone Sand. We will monitor pressure on our intermediate casing during completion operations to ensure no communication is observed.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
