Devon Energy Production Company, LP respectfully reports alternate intermediate casing cement. Devon spoke to Paul Kautz at the OCD and received verbal approval with continuing into our production interval with no further action. Below is the remediation attempts made on this well.

8-5/8" intermediate string

While drilling the intermediate hole section we encountered losses at 844'. We drilled this interval with fresh water on partial returns. We did not circulate cement to surface on the 8-5/8" casing string. We attempted two backside squeeze remediations. On the first attempt, we pumped 40bbls (calculated fill to the top of the loss zone) and waited for the cement to set up. After waiting on cement, we established injection and pumped the 2nd remediation. On the second remediation, we were only able to pump 28 bbls due to maxing out on pressure at 950psi while pumping. After waiting on cement, we attempted to establish injection with on success. The backside would immediately pressure up on our injection attempts.
