Crusoe BKO Federal Com 1H 30-015-34729 Lease # NM-111400 660'FNL & 700'FEL Unit Letter A-24-16S-24E Eddy County, New Mexico

EOG Resources, Inc. plans to plug and abandon this well as follows:

- 1. MIRU all safety equipment as needed. NU BOP. POOH with production equipment.
- 2. Set a CIBP at 4850' with 10 sx Class C cement on top to 4750'. WOC and tag. This will cover Morrow perfs. lenk test CIBP
- 3. Spot a 25 sx Class C cement plug from 3916'-3664'. This will cover Abo top.
- 4. Spot a 25 sx Class C cement plug from 3206'-2954'. This will cover Tubb top.
- 5. Perforate at 1142'. Spot a 25 sx Class C cement plug from 1142'-890'. WOC and tag. This will cover intermediate casing shoe.
- 6. Perforate at 546'. Spot a 25 sx Class C cement plug from 546'-294'. WOC and tag. This will cover surface casing shoe.
- 7. Perforate at 252'. Spot a 25 sx Class C cement plug from 252' up to surface. Back fill as needed.
- 8. Cut off wellhead and install dry hole marker. Clean location as per regulated.

## Permanent Abandonment of Federal Wells Conditions of Approval

Failure to comply with the following Conditions of Approval may result in a Notice of Incidents of Noncompliance (INC) in accordance with 43 CFR 3163.1.

1. Plugging operations shall commence within <u>ninety (90)</u> days from the approval date of this Notice of Intent to Abandon.

If you are unable to plug the well by the  $90^{th}$  day provide this office, prior to the  $90^{th}$  day, with the reason for not meeting the deadline and a date when we can expect the well to be plugged. Failure to do so will result in enforcement action.

The rig used for the plugging procedure cannot be released and moved off without the prior approval of the authorized officer. Failure to do so may result in enforcement action.

- 2. <u>Notification:</u> Contact the appropriate BLM office at least 24 hours prior to the commencing of any plugging operations. For wells in Chaves and Roosevelt County, call 575-627-0272; Eddy County, call 575-361-2822; Lea County, call 575-393-3612.
- 3. <u>Blowout Preventers</u>: A blowout preventer (BOP), as appropriate, shall be installed before commencing any plugging operation. The BOP must be installed and maintained as per API and manufacturer recommendations. The minimum BOP requirement is a 2M system for a well not deeper than 9,090 feet; a 3M system for a well not deeper than 13,636 feet; and a 5M system for a well not deeper than 22,727 feet.
- 4. <u>Mud Requirement:</u> Mud shall be placed between all plugs. Minimum consistency of plugging mud shall be obtained by mixing at the rate of 25 sacks (50 pounds each) of gel per 100 barrels of **brine** water. Minimum nine (9) pounds per gallon.
- 5. <u>Cement Requirement</u>: Sufficient cement shall be used to bring any required plug to the specified depth and length. Any given cement volumes on the proposed plugging procedure are merely estimates and are not final. Unless specific approval is received, no plug except the surface plug shall be less than 25 sacks of cement. Any plug that requires a tag will have a minimum WOC time of 4 hours.

In lieu of a cement plug across perforations in a cased hole (not for any other plugs), a bridge plug set within 50 feet to 100 feet above the perforations shall be capped with 25 sacks of cement. If a bailer is used to cap this plug, 35 feet of cement shall be sufficient. Before pumping or bailing cement on top of CIBP, tag will be required to verify depth. Based on depth, a tag of the cement may be deemed necessary.

Unless otherwise specified in the approved procedure, the cement plug shall consist of either Neat Class "C", for up to 7,500 feet of depth or Neat Class "H", for deeper than 7,500 feet plugs.

- 6. <u>Dry Hole Marker</u>: All casing shall be cut-off at the base of the cellar or 3 feet below final restored ground level (whichever is deeper). The BLM is to be notified a minimum of 4 hours prior to the wellhead being cut off to verify that cement is to surface in the casing and all annuluses. Wellhead cut off shall commence within ten (10) calendar days of the well being plugged. If the cut off cannot be done by the 10<sup>th</sup> day, the BLM is to be contacted with justification to receive an extension for completing the cut off.
- The well bore shall then be capped with a 4-inch pipe, 10-feet in length, 4 feet above ground and embedded in cement, unless otherwise noted in COA (requirements will be attached). The following information shall be permanently inscribed on the dry hole marker: well name and number, name of the operator, lease serial number, surveyed location (quarter-quarter section, section, township and range or other authorized survey designation acceptable to the authorized officer such as metes and bounds).
- 7. <u>Subsequent Plugging Reporting:</u> Within 30 days after plugging work is completed, file one original and three copies of the Subsequent Report of Abandonment, Form 3160-5 to BLM. The report should give in detail the manner in which the plugging work was carried out, the extent (by depths) of cement plugs placed, and the size and location (by depths) of casing left in the well. <u>Show date well was plugged.</u>
- 8. <u>Trash:</u> All trash, junk and other waste material shall be contained in trash cages or bins to prevent scattering and will be removed and deposited in an approved sanitary landfill. Burial on site is not permitted.

Following the submission and approval of the Subsequent Report of Abandonment, surface restoration will be required. See attached reclamation objectives.

## EUREAU OF LAND MANAGEMENT Carlsbad Field Office

620 E. Greene St. Carlsbad, New Mexico 88220-6292 Www.blm-gowina

in Raply Refer To: 1310

Reclamation Objective: Oil and gas development is one of many uses of the public lands and resources.

While development man have a chost on long term effect on the land concessful reclamation can ensure Reclamation Objectives and Procedures While development may have a short- or long-term effect on the land, successful reclamation can ensure the effect of the land, successful reclamation can ensure distribed areas not needed for active with the development, all disturbed areas not needed for active subjour of broduction obergious should indered , interim tecloration in order to minimize the gibbout of broduction obergious and interiment support of production operations should undergo merminated as that the character and broduction tacing on development on order resources and uses. At this commonweight and productivity of the land and water are restored.

The long-term objective of final reclamation is to set the course for eventual ecosystem restoration. including the restoration of the natural vegetation community, hydrology, and wildlife habitats. In most cases this means returning the land to a condition approximating or equal to that which existed prior to the character of the land and swater to the time. disturbance. The final goal of reclamation is to restore the character of the land and water to its predisturbance condition. The operator is generally not responsible for achieving full ecological restoration of the site. Instead, the operator is generally not responsible for achieving nin ecological residuation objectives of the cress and productivity visual, hydrological, and productivity objectives of the surface management agency and take steps necessary to ensure that long-term objectives will be reached through natural processes.

To achieve these objectives, remove any and all comminants, scrap/wash, equipment, pipelines and nower line 10 aggieve mese objectives, remove any and all communants, scrap/trash, equipment, pipelines and notes removed prior to realessed and scrap plenty of time to have therefore and power lines and poles removed pilor to reclamation, don't wait till the last day and try to set them to remove infraodress or the location to bland with the commandian lands butes removed private to registration, don't want in the race only and my to get ment to remove re-distribute the positive collection control to peed and with the surrounding landscape, and and applicable of the positive collection. re-distribute the native soils, provide erosion control as needed, rip and seed as specified in the original APD COA. This will apply to well pads, facilities, and access roads. Barricade access road at the starting point, if reserve pits have not reclaimed due to salts or other contaminants, submit a plan for approval, as to how you propose to provide adequate restoration of the pit area.

- The Application for Permit to Drill or Reemer (APD, Form 3160-3). Surface Use plan of Operations must include adequate measures for stabilization and reclamation of dishubed lands. Oil and Gas operators must plan for reclamation both interior and final up from in the APD. Operations must include adequate measures to suppression and recommendation of distinction and grant of distinctions and grant of distinctions and grant of the contract of th process as per Onshore Oil and Gas Order No. 1.
- 2. For wells and/or access roads not having an approved plan, or an inadequate plan for surface reclamation (airban intening on Sunt Tanlamation) the Operation when the proposal describing the respectives consistent of final reclamation), the operator must submit a proposal describing the procedures for reclamation. For interim reclamation, the appropriate time for submittal would be when stime the West Companion of December 2150.40 For final the procedures for rectamation, For interim rectamation, the appropriate time for summittan would be when filling the Well Completion or Recompletion Report and Log (Form 3160-4). For final many the wholes of latent or the reclamation, the appropriate time for submittal would be when filling the Notice of Intent, or the Subsequent Report of Abandonnent, Sundry Notices and Reports on Wells (Form 3160-5). Subsequent Report of Abandonment, Sundry Wouldes and Reports on wells (Form 2100-2). Intelling reclamation is to be completed within 6 months of Well completion, and final reclamation is to be completed within 6 months of well abandonment
- The operator must file a Subsequent Report Plug and Abandonment (Form 3160-5) following the
- 4. Previous instruction had you waiting for a BLM specialist to inspect the location and provide you with raciamation marriage and provide you waiting for a BLM specialist to inspect the location and provide you with reclamation requirements. If you have an approved Surface Use Plan of Operation and provide you approved Sundry Motice, you are free to proceed with reclamation as per approved APD. If you

have issues or concerns, contact a BLM specialist to assist you. It would be in your interest to pane a BTW specialist look at the location and access load bliot to the lemonal of teclamation makes a reason and access to additional of the location and access to a prior to the removal of teclamation. equipment to ensure the increase of the increa Subsequent Report of Reclamation. This will prompt a specialist to inspect the location to verify Work was completed as per approved plans.

- The approved Subsequent Report of Reclamation will be your notice that the native soils, contour and seedbed have been reestablished. If the BIM objectives have not been met the operator will be notified and corrective actions may be required.
- ime as the operator to monitor these locations and/or access roads until such ime as the operator feels that the BLM objective has been met. If after two growing seasons the continue as the operator rects that the St.in objective has been met. It after two growing seasons are actions may be meaded. When you could be Dot he Dot he potential for successful revegetation, additional actions. actions may be needed. When you feel the BLM objectives have been met submit a Final Abandonment Notice (FAN). Form 3160-5, Stating that all reclamation requirements have been achieved and the location and/or access road is ready for a final abandonment inspection.
- 7. At this time the BLM specialist will inspect the location and/or access road. If the native soils and contour have been restored, and the revegetation is successful, the FAN will be approved, releasing the operator of any further liability of the location and/or access road, If the location and/or access road, If the location and/or access road have not achieved the objective. You will be notified as to additional work needed or additional time being needed to achieve the objective.
