Permanent Abandonment of Federal Wells Conditions of Approval (LPC Habitat)

Failure to comply with the following Conditions of Approval may result in a Notice of Incidents of Noncompliance (INC) in accordance with 43 CFR 3163.1.

1. Plugging operations shall commence within <u>ninety (90)</u> days from the approval date of this Notice of Intent to Abandon.

If you are unable to plug the well by the 90th day provide this office, prior to the 90th day, with the reason for not meeting the deadline and a date when we can expect the well to be plugged. Failure to do so will result in enforcement action.

The rig used for the plugging procedure cannot be released and moved off without the prior approval of the authorized officer. Failure to do so may result in enforcement action.

- 2. <u>Notification</u>: Contact the appropriate BLM office at least 24 hours prior to the commencing of any plugging operations. For wells in Chaves and Roosevelt County, call 575-361-2822; Lea County, call 575-393-3612.
- 3. <u>Blowout Preventers</u>: A blowout preventer (BOP), as appropriate, shall be installed before commencing any plugging operation. The BOP must be installed and maintained as per API and manufacturer recommendations. The minimum BOP requirement is a 2M system for a well not deeper than 9,090 feet; a 3M system for a well not deeper than 13,636 feet; and a 5M system for a well not deeper than 22,727 feet.
- 4. <u>Mud Requirement:</u> Mud shall be placed between all plugs. Minimum consistency of plugging mud shall be obtained by mixing at the rate of 25 sacks (50 pounds each) of gel per 100 barrels of brine water. Minimum nine (9) pounds per gallon.
- 5. <u>Cement Requirement</u>: Sufficient cement shall be used to bring any required plug to the specified depth and length. Any given cement volumes on the proposed plugging procedure are merely estimates and are not final. Unless specific approval is received, no plug except the surface plug shall be less than 25 sacks of cement. Any plug that requires a tag will have a minimum WOC time

In lieu of a cement plug across perforations in a cased hole (not for any other plugs), a bridge plug set within 50 feet to 100 feet above the perforations shall be capped with 25 sacks of cement. If a bailer is used to cap this plug, 35 feet of cement shall be sufficient. Before pumping or bailing cement on top of CIBP, tag will be required to verify depth. Based on depth, a tag of the

Unless otherwise specified in the approved procedure, the cement plug shall consist of either Neat Class "C", for up to 7,500 feet of depth or Neat Class "H", for deeper than 7,500 feet plugs.

base of the cellar or 3 feet below final restored ground level (whichever is deeper). The BLM is to be notified a minimum of 4 hours prior to the wellhead being cut off to verify that cement is to surface in the casing and all annuluses. Wellhead cut off shall commence within ten (10) BLM is to be contacted with justification to receive an extension for completing the cut off. habitat, the casings shall be cut-off at the base of the cellar or 3 feet below final restored ground thick and welded in place. A weep hole shall be left in the plate and/or casing.

NMOCD also requires the operator to notify NMOCD when this type of dry hole marker is used. This can be done on the subsequent report of abandonment which is submitted to the BLM after the BLM. State that a below ground cap was installed as required in the COA's from the

- 7. <u>Subsequent Plugging Reporting:</u> Within 30 days after plugging work is completed, file one original and three copies of the Subsequent Report of Abandonment, Form 3160-5 to BLM. The report should give in detail the manner in which the plugging work was carried out, the extent (by depths) of cement plugs placed, and the size and location (by depths) of casing left in the well.
- 8. <u>Trash:</u> All trash, junk and other waste material shall be contained in trash cages or bins to prevent scattering and will be removed and deposited in an approved sanitary landfill. Burial on site is not permitted.

Following the submission and approval of the Subsequent Report of Abandonment, surface restoration will be required. See attached reclamation objectives.

<u>Timing Limitation Stipulation/ Condition of Approval for Lesser Prairie-Chicken:</u>
From March 1st through June 15th annually, abandonment activities will be allowed except between the hours from 3:00 am and 9:00 am. Normal vehicle use on existing roads will not be restricted

Reclamation Objectives and Procedures Recignation Objective: Oil and gas development is one of many uses of the public lands and resources.

While development measures a chart on the land encreaseful vaclamation can ensure While development may have a short- or long-term sffect on the land, successful reclamation can ensure the effect is not permanent. During the life of the development, all disturbed areas not needed for active subjour of broduction obergious spould indered all lecturation in order to minimize the graph of the formal and the order of the determinent and instituted are not received to the formal and instituted are not also and instituted to the formal and instituted are not received to the formal and instituted are not received to the formal and instituted are not received to the formal and instituted to the formal and instituted are not received to the formal and instituted to the formal and instituted to the formal and instituted are not received to the formal and instituted to the formal support of production operations should mineric. Increase in the character and broduction isolates of nevertheness on nevertheness of neverth productivity of the land and water are restored.

The long-term objective of final reclamation is to set the course for eventual ecosystem restoration. including the lessonation of the natural vegetation community, hydrology, and wildlife habitats. In most cases this means returning the land to a condition approximating or equal to that which existed prior to the distribution of the final coal of modern coal and translating prior to the character of the land and translating prior to the character of the land and translating prior to the distribution. The final goal of reclamation is to restore the character of the land and water to its predistuibance condition. The operator is generally not responsible for achieving full ecological restoration of the current colors has chosename colors. the site. Instead, the operator must achieve the short-term stability, visual hydrological and productivity the site, misteau, the operator must achieve me short-term stating, visual hydrological and productivity will be reached theoretic agency and take steps necessary to ensure that long-term objectives will be reached through natural processes.

To achieve these objectives, remove any and all comminants, scrap/wash, equipment, pipelines and nower line 10 actieve mese objectives, remove any and all comminants, scrap/trash, equipment, pipelines and nodes removed prior to realessation down mote all the last dos and thus therefore and power lines and power lines and provided the second state of th powertimes (Contact set vice companies, and vice press, or time to make the rights and principles are principles and principles and principles are principles are principles and principles are principles are principles and principles are principle infrestructure). Strip and remove caliche, comour he location to blend with the surrounding landscape, made the contract of th re-distribute the native soils, provide erosion control as needed, in and seed as specified in the original APD COA. This will apply to well pads, facilities, and access roads. Barricade access road at the starting point, if reserve pits have not reclaimed due to salts or other contaminants, submit a plan for approval, as to pow 3.00 blobose to bionige agedrate testolation of the bit alea.

- The Application for Permit to Drill or Recenter (APD, Form 3160-3). Surface Use Plan of Operations must include adequate measures for stabilization and reclamation of dishubed lands. Oil and Gas operators must plan for reclamation hold interior and final un from in the APD. Off and Gas operators must plan for reclamation, both interim and final, up from in the APD process as per Onshore Oil and Gas Order No. 1.
- 2. For wells and/or access roads not having an approved plan, or an inadequate plan for surface lectaination (either interim or final rectains on expression the operator must submit a proposal describing the procedures for reciam or man reciamation, me obstation mass summing proposal accounting tentaments (extract mass many many reciamation), are obstation mass summing proposal accounting be when filing the Well Completion or Recompletion Report and Log (Form 3160-4). For final reclanation, the appropriate time for submittal would be when filing the Notice of Intent, or the Subsequent Report of Abandonnent, Sundry Notices and Reports on Wells (Form 3160-5). interior recommendation is to be completed within 6 months of well completion, and final reclamation
- The operator must file a Subsequent Report Plug and Abandonment (Form 3160-5) following the
- 4. Previous instruction had you waiting for a BLM specialist to inspect the location and provide you with reclamation requirements for the location and provide you appear to the location and provide you are the plan of Operation and/or an with reclamation requirements. If you have an approved Surface Use Plan of Operation and provide you approved Sundry Motice, you are free to proceed with reclamation as per approved APD, If you

have issues or conceins, contact a BLM specialist to assist you. It would be in your interest to have a BTM specialist look at the location and specialist to assist your it would be in your mission of sectional of sections. Equipment to be a substitution of the constitution of the constitu Subsequent Report of Reclamation. This will prompt a specialist to inspect the location to verify Work was completed as per approved plans.

- The approved Subsequent Report of Reclamation will be your notice that the native soils, contour pe notified and comparing contract of recommends will no long that the manner and seedped pake peed testing property of recommends will no long that the manner and a contract of recommends will no long that the manner and a contract of the part of the pattern and the contract of the part of the pattern and the contract of the pattern and the patter
- it is the responsibility of the operator to monitor these locations and/or access roads until such time ac the operator feels that the DI M objective has been med if after two orowing seasons the time as the operator feels that the BLM objective has been met. If after two growing seasons the actions man be needed. When you feel the D7 3.5 objective test occurrence have been more removed actional additional. actions may be needed. When you feel the BLM objectives have been met submit a Final Abandomient Notice (FAN). Form 3160-5, Stating that all reclamation requirements have been achieved and the location and/or access road is ready for a final abandonment inspection.
- 7. At this time the BLM specialist will inspect the location and/or access road. If the native soils and one that represents the TAM will be approved. contour have been restored, and the revegetation is successful, the FAN will be approved. releasing the operator of any further liability of the location and/or access road. If the location endior access road have not achieved the objective, you will be notified as to additional work needed or additional time being needed to achieve the objective.
