**Procedure Description:** EOG drilled this well to TD 10,280' MD - after running and cementing casing, could not run a Formation intermediary test. Attempted to squeeze the shoe, (3 attempts, two with retainer and one a regular squeeze), ran a caliper log. Two casing problem areas were identified @ 9475' and 12,200' - it is believed that the casing might have backed off while drilling out. EOG would like to P&A this well according to the attached procedure. The current and proposed wellbore diagrams are attached.

Surface Disturbance

**Is any additional surface disturbance proposed?:** No
