 Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

On Monday, July 4, 2022, Chevron attempted to pump down a plug to test production casing per standard and approved procedures on Cicada Unit 22H. The plug was unable to reach depth, becoming stuck at approximately 19,300' MD. The plug showed damage to critical components when retrieved from the hole. A subsequent attempt was made with a different design of plug. This also resulted in the plug unable to reach depth and damaged. Chevron is mobilizing a coiled tubing unit to attempt to clean out the obstruction in the well. Prior to executing the clean out operation, Chevron is proposing setting a plug and testing from a shallower depth which does not include the full length of the lateral. All casing in the vertical will be tested. Approximately one to two thousand feet of the two-mile lateral will be untested.

Chevron received verbal approval from Mr. Paul Kautz at 12:15 PM on 7/6/2022 to move forward with the shortened length production test.
