# Money Graham 126H P&A Procedure

1. RU cementers to casing valve on wellhead.
2. Pressure test lines.
3. Pump cement job.
  - A. Pump 20 bbl fresh water spacer.
  - B. Pump 90 bbl, 14.8 ppg Class C cement.
    - i. This will allow 20 bbl to be injected through the parted casing into formation.
    - ii. This will leave 70 bbl inside casing to fill casing capacity from the casing part to surface.
  - C. Pump 5 – 10 bbl sugar water to clear/clean cement lines and wellhead.
4. RD cementers.
5. WOC for at least 8 hours.
6. Cut off wellhead and casing 3' below ground level or at the base of the cellar (whichever is deeper).
7. Back fill cellar with gravel and level to rest of the location.

# Current WBD

## Notes:

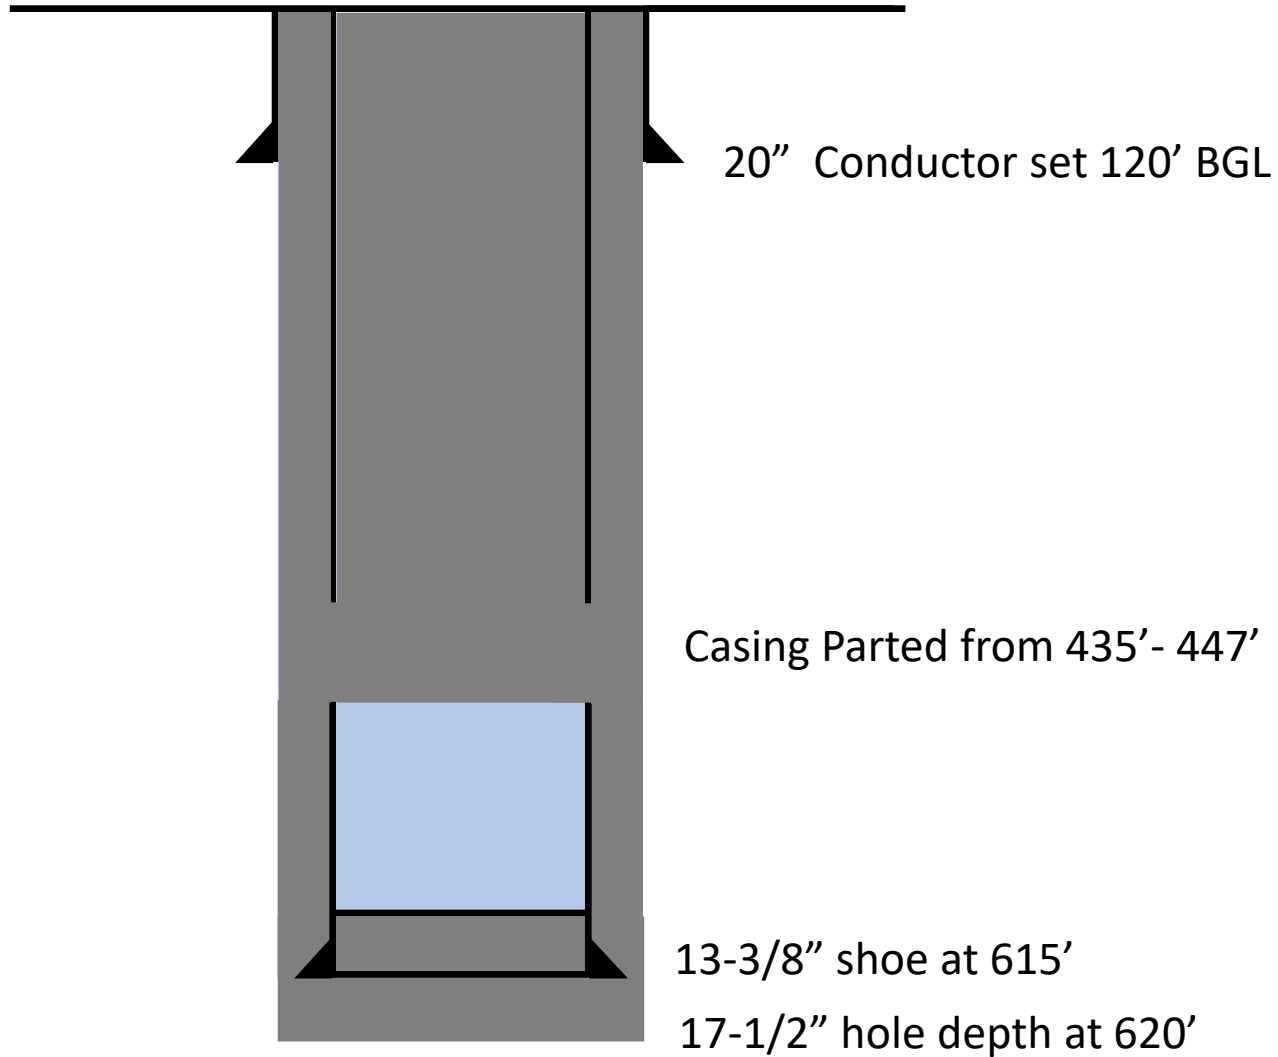

Surface casing parted towards the end of the cement job (3 bbl left in displacement).

50 bbl of cement had already been returned to surface.

Cement is behind casing with a leak path at the parted interval.

Fresh water is inside 13-3/8" casing.

# WBD After P&A

## Notes:

P&A cement job will fill 13-3/8" casing with cement from surface down to casing part.

This will isolate the potential leak path from surface.
